COMPANY REPORTS

SEEBPORE COAL COMPANY, LIMITED.

Report for the half-year ended 31st December, 1934.

After writing off Rs. 6,567-4-0 for Depreciation, there is a balance of Rs. 35,413-10-9 at the credit of Profit and Loss Account from which the Directors recommend :—

Dividend of 10 annas per share ...	Rs.	25,000 0 0
Carry forward	,,	10,413 10 9

As compared with the previous half-year, raisings improved but despatches were less. Owing to a larger proportion of Steam Coal having been despatched, the average price realised from sales was higher.

Auditors have to be appointed for the current year and Messrs. Price, Waterhouse, Peat & Co. again offer their services.

Andrew Yule & Co., Ld., J. H. S. Richardson—Director, Managing Agents.

Comparative Statement of the balance sheets for the last three consecutive Half-years.

MINTO COAL COMPANY, LIMITED.

Report for the half year ended 31st December, 1934.

The Revenue Account shows a profit of Rs. 1,036-10-0 which on being transferred to Profit and Loss Account leaves a credit balance of Rs. 4,582-5-10 to be carried forward.

Owing to Viceroy Colliery having been worked out the Mining Rights of the property have been relinquished and it has consequently become necessary to write off altogeter such assets as are of no value. The depreciation accumulated to the end of the half year has been appropriated to meet this position.

The demand for the class of coal mined at Girimint Colliery has shown no improvement and it has therefore not been possible to reopen the Colliery.

Auditors have to be appointed for the current year and Messrs Price Waterhouse, Peat & Co., again offer their services.

Messrs. Andrew Yule & Co., Managing Agents.

J. H. S. Richardson, Directors.

BENGAL GIRIDIH COAL COMPANY, LIMITED.

Report for the half-year ended 31st December, 1934.

The Revenue Account shows a loss of Rs. 4,428-11-5 which on being transferred to Profit and Loss Account leaves a debit balance of Rs. 78,981-05 to be carried forward.

Owing to the continued depression in the industry the Company's colliery remained closed during the half-year.

Mr. G. Morgan, C.I.E., M.L.A., being absent from Calcutta has not signed the Report or Accounts. He retires by rotation but is eligible for re-election.

Auditors have to be appointed for the current year and Messrs. Lovelock & Lewes again offer their services.

J. H. S. Richardson and Kanailall Jatia, Directors.

Messrs. Andrew Yule & Co., Managing Agents.

BENGAL BHATDEE COAL COMPANY, LIMITED.

Report for the half-year ended 31st December, 1934.

The Revenue Account shows a profit of Rs. 2,119-2-3 which on being transferred to Profit and Loss Account reduces the debit balance to be carried forward to Rs. 1,07,245-21-1.

The Colliery has been worked on contract for the whole of the half-year and raisings and despatches have been maintained on a satisfactory basis.

Mr. G. Morgan, C.I.E., M.L.A., being absent from Calcutta has not signed the Report or Accounts. He retires by rotation but is eligible for re-election.

Auditors have to be appointed for the current year and Messrs. Lovelock & Lewes again offer their services.

J. H. S. Richardson and Kanailall Jatia, Directors.

Messrs. Andrew Yule & Co., Managing Agents.

Comparative statement of the balance sheets for the last three consecutive half-years.

CAWNPORE SUGAR WORKS.

Report for the year ended 31st December, 1934.

Revenue Account.—Shows a profit after providing for commission of Rs. 11,82,443. Add balance brought forward from 1933, Rs. 2,02,312 making a total of Rs. 13,84,755. Deduct :—Placed to taxation reserve, Rs. 2,00,000; placed to depreciation, Rs. 3,50,000; placed to renewals and improvements fund, Rs. 1,00,000; less ad-interim dividends, Rs. 1,90,000, leaving at credit of profit and loss account, Rs. 5,44,755. This balance the directors recommend should be disposed of as follows :—In payment of a final dividend on the preference shares of 4 per cent. making 8 per cent. for the year free of income-tax Rs. 40,000; in payment of a final dividend on the ordinary shares of Rs. 2 per share making Rs. 3 per share for the year free of income-tax, Rs. 3,00,000; and carry forward, Rs. 2,04,755. The stock position in Java has continued to be the dominating factor in the eastern markets, and in the latter part of the year a new low record in sugar values was established. Prices, however, have since shown some recovery. A scheme for the setting up of a central organisation for the marketing of Indian factory-made sugar has taken shape, and it is hoped that sufficient support will be received to bring this into operation and so effect an improvement in internal prices. On April 1 an excise duty at the rate of Rs. 1-5 per cwt. on factory-made sugar and As. 10 per cwt. on hand-made sugar, was imposed. A substantial portion of the company's production for the twelve months had, however, been sold and issued prior to that date. During the year the Sugarcane Act of 1934 was placed on the Statute Book. This Act is designed to regulate the rates at which factories must purchase sugarcane in relation to the prices ruling for sugar. The company's factories continue to maintain a high standard of efficiency, but supplies of cane for the current season are likely to be affected by increased competition. The company's distilleries have contributed in an important degree to the results for the year. Under present circumstances, the directors consider it expedient to maintain a substantial carry forward. Stocks of sugar and molasses have been valued at contract prices at or under market values.

Synopsis of the balance sheet:—

Liabilities—	Rs.	*Assets*—	Rs.

SOUTH BEHAR SUGAR MILLS

Report for the year ended October 31st, 1934.

Revenue Account.—The profit of the year amounted to Rs. 2,92,791. After payment of interest, debenture interest and providing for depreciation reserve, there remains a balance of Rs. 1,82,255 which the directors recommend should be dealt with as follows:—Transfer to general reserve Rs. 50,000; transfer to reserve for income-tax and super-tax Rs. 38,000; payments of dividends (free of income-tax) :—On preference shares cumulative dividend for previous year at 7 per cent. from the dates of payment (approximately), Rs. 3,000; on preference shares at 9 per cent. per annum Rs. 18,000; on ordinary shares at 10 per cent. per annum Rs. 65,000; total Rs. 1,74,000; leaving a balance approximately of Rs. 8,000 to be carried forward. It is gratifying to note that the results of the first year had been quite encouraging. The working of current season to the date of this report in spite of the excise duty, the low price of sugar and the difficulty of full cane supply, is hopeful. The supply of cane on this side of the country depends on the price of Jaggery which is abnormally high this year. Further minor extensions have been done during the last closing season and now the Plant is capable of easily handling up to 1,000 tons of cane per day.

Synopsis of the balance sheet:—

PUNJAB PORTLAND CEMENT

Report for the year ended September, 1934.

From the accounts it will be seen that after setting aside Rs. 1,31,785 to redemption of debenture fund and Rs. 4,05,696 to depreciation, the balance carried forward from the profit and loss account to the balance sheet is Rs. 2,56,146. By adding to this amount the balance of Rs. 342 brought forward from last year's accounts, the sum of Rs. 2,56,488 is rendered available for distribution and the directors recommend that this amount should be applied as follows :—In payment of a dividend on the cumulative preference shares at 7½ per cent., Rs. 37,500; in payment of a dividend on the ordinary shares at 7 per cent., free of tax, Rs. 2,10,000; bonus to staff, Rs. 8,500; balance to be carried forward, Rs. 488. The amount set aside to depreciation includes a sum of Rs. 17,704 which has been appropriated towards writing down certain obsolete items of plant and buildings. The arrangements which were in progress last year to extend the period of redemption of the debenture issue have been completed and have resulted in Rs. 10 lakhs being extended for eight years at 5½ per cent. interest.

Synopsis of the balance sheet:—

INDIAN FINANCE YEAR-BOOK, 1934

LONDON PRESS OPINIONS

The Times

Useful Reference Work

Mr. C. S. Rangaswami, Managing Editor of the Calcutta weekly, *Indian Finance* now on a visit to this country, and his colleague, Mr. P. R. Srinivas, are to be congratulated upon the thoroughness of the *Indian Finance Year-Book, 1934*, Calcutta, Rs. 5 (7s. 6d.) It is valuable for the comparative tables given in all the sections, which comprise accounts of the India Government and the Provincial Governments; currency and monetary tables; external and internal trade in the chief commodities, industries, banks, insurance, public utilities, transport, co-operation and population.

Imports of cotton piecegoods of various descriptions from different countries are shown in millions of yards, figures being given of pre-war, war and post-war averages (each covering a five-year period) and of each year from 1929-30. Similarly, there is given the composition of the paper currency reserve under ten headings for the last day of each month since March, 1914. Each main section is preceded by an instructive survey of events and conditions in 1933-34.

A useful feature of the book is the tabular statement showing the working of the Tariff Board since its establishment in 1923, comprising the subject of enquiry, the recommendations of the Board, and the action taken thereon by Government. The industrial section is full and explanatory. The Year-Book will be of value to all who wish to be well informed on Indian economics.

The Financial Times

"Indian Finance Year-Book, 1934."

A Practical Guide to Current Problems.

The Joint authors of *Indian Finance Year-Book, 1934*. were wise not to subordinate the quality of this invaluable compendium to the rigorous requirements of a time table. The result is a notable contribution to Indian economic literature, as well as an indispensable work of reference, for the merchant, student and politician alike.

It would be difficult to imagine a more comprehensive and up-to-date compilation of facts and inferences, which should be in the hands of all who aspire to a proper understanding of the Indian problem. The national finances, including the provincial budgets and railway accounts, banking, currency, monetary and trade—overseas and internal—statistics are all marshalled and presented, with comparative figures in many cases for the preceding ten years, in convenient and attractive form.

Separate sections are devoted to industry, banking, insurance, public utilities, transport and co-operative societies. The history and working of the Indian Tariff Board are reviewed, and a feature of the banking and insurance section is the analyses of the balance sheets of the leading British, Indian and foreign undertakings operating in India. The introductions to each chapter are well written and informative. The correctness of the facts can hardly be disputed. The authors' conclusions, if not always equally indisputable, are set out with obvious sincerity and based upon the knowledge and experience of one of the most successful and well informed Indian financial journalists.

The Policy

Indian Finance Year book, 1934 (Calcutta, Rs. 5)

The issue of this important publication so late in the year is regretted by the joint editors, P. R. Srinivas and C. S. Rangaswami. In the compilation of the book they encountered great difficulties in endeavouring to cover the entire field and were unwilling to subordinate the quality of the work to the requirements of the time table. The Year Book is an excellent survey of the National finance of India in 1933-34. It shows that India, having passed through a period of unprecedented deperession has now emerged into a better era. A brief résumé of the National Finances in 1934, given at the beginning of the book, deals with the finances of each Province separately, giving a survey of the Provincial Budget, and the taxation proposals for 1935.

The Daily Herald

Financial details are regarded by many as being uninteresting. Sometimes they are. But when they are intelligently illustrated they often provide most interesting studies.

An example of the latter kind of financial record is the *Indian Finance Year-Book, 1934,* which is an annual supplement to *Indian Finance*. The editor is P. R. Srinivas, and the Year-Book is published from 20, British Indian Street, Calcutta, at the price of five rupees.

It covers the entire national economic life of India and should prove of particular interest to investors in Indian securities at the present time. It provides a layman's study of the situation, with interesting sidelights on the human side of Indian problems, but a study which should at the same time provide the expert, the banker and merchant with the information he requires.

Discussing the means by which budgetary equilibrium has been established in the various provinces the editor, while congratulating the Governments concerned, does not hesitate to point out that "such improvement as has been effected has been at the cost of high human suffering, and that in the centre the very claim of Government to having balanced the budget is open to doubt and question."

The Financial News

"Indian Finance Year-Book, 1934,"

The Indian Finance Year-Book, 1934. (Indian Finance, Calcutta, Rs. 5) copies, of which have just reached this country, is a notable contribution to Indian economic literature. It is an indispensable work of reference and a most comprehensive compilation of facts and inferences. Statistics on national finances, provincial budgets and railway accounts, banking, currency, and trade, are all presented, with comparative figures in many cases for the preceding ten years, in convenient form. Industry, banking, insurance, public utilities and transport are dealt with in separate sections.

Reserve Bank Prospectus Supplement

Vol. XV. No. 11 MARCH 8, 1935 Price As. 8

RESERVE BANK APPLICATION LIST OPENS MARCH 22

TO BE KEPT OPEN FOR FOUR DAYS

ELABORATE ARRANGEMENT FOR WIDE DISTRIBUTION

FACILITIES TO ONE AND ALL

The keenly-awaited prospectus of the Reserve Bank of India has been released to the press to-day.

Indian Finance is gratified that its appeal for the widest possible public interest in this share issue has met with a response far exceeding its most sanguine expectations and that its hope of a proper and even distribution of voting rights is now assured of fulfillment.

Indian Finance stood for the state ownership of the capital of the Reserve Bank. The eagerness, with which the shares are now sought for alike in the cities and mofussil towns, may be taken as a guarantee that, better than State ownership, the capital will now be under public ownership—ownership by the public in the best and completest sense of the term. If we may say so, this is better than the best.

This public ownership is necessary not only at the start ; it is essential for ever. The Indian public have done well by appreciating their duty (and sensing their profit) in regard to subscribing for Reserve Bank shares. They must now resolve that when they have got a good thing, they must keep it and continue to keep it.

Mere allurement of heavy premiums must not delude them into parting with a valuable possession—valuable not only for the satisfactory dividend but also for the precious privilege that its votes constitute real Financial Swaraj.

From this point of view, subscribing for and holding Reserve Bank shares has a national significance. But the national service in this regard cannot be said to be complete till each shareholder actively exercises his voting rights with care, good judgment and sole consideration for national interests.

Exercise of the vote for parliamentary elections is often coloured by political passion and party fervour. Exercise of the vote at the Reserve Bank elections requires the elimination of passion and prejudice, and the assertion of sense and sensibility, judgment and prudence.

Popular distribution of Reserve Bank voting rights is an assurance that knowledge of public finance will tend to become more widespread.

The purpose of this Supplement is to explain, in simple terms, all that the man-in-the-street should know of the Reserve Bank and, particularly, of the present issue of shares.

At the outset, therefore, we must answer two questions :—

1. Why do we need a Reserve Bank?
2. What is a Reserve Bank?

1. There are many transactions of the Government which are allied to banking or which pertain to the money market or which have vast repercussions in one or other or more of the varied sections of the money market.

Thus, the Government of India are in the nature of bankers to the Railway Department and the Provincial Governments. They issue Postal Cash Certificates and accept deposits in Postal Savings Banks. These are all banking activities. They cause the diversion to the Treasury of considerable sums from the capital market.

The Government have to remit considerable sums of money to the India Office for meeting the Home charges. These remittances are roundabout £30 million per annum. Such operations have a profound influence on the exchange market.

The Government issue Treasury Bills week after week. These affect the short loan market.

The Government issue loans for meeting new capital requirements and for paying off old loans. These affect the giltedge market and the capital market.

It will thus be seen that, in the nature of their work, the Government are called upon to conduct transactions and undertake operations which have repercussions in the capital, money, exchange and giltedge markets, and which are of such size and weight that according as such transactions are put through in a wholesome manner or not, the effect on the markets will be wholesome or otherwise.

It follows that in the case of a Government which have to carry out transactions of such weight and size, the authority to guide and inspire these transactions must be one having a thorough knowledge of the exchange, money, giltedge and capital

markets. Such a competent authority is a Central Bank.

In most of the advanced countries of the world, operations of this kind are entrusted to a Central Bank. In India there has been, hitherto, a departmental management of these operations. It is the Controller of the Currency that is in charge in this regard.

The Controller of the Currency is recruited from the services. In the early stages of his career, he has had nothing to do with banking or money markets. Nor has he, perhaps, had even a college training in the theory of economics. He may thus have had no knowledge from study and no experience from practical contact, in financial matters. He has to learn aught of finance and currency only at a late stage in his official career.

It has, therefore, meant that departmental management of currency and allied matters has meant amateurish management. We have had eminent Controllers of Currency, some of them very capable, quick to learn and all that. But the touch of amaturishness has always been there.

We need a Central Bank because we want the management of currency and financial operations to be in the hands, not of amateurs, but of an institution whose staff have knowledge, training, correct instinct and experience in banking and finance.

We need a Central Bank because there must be unification of currency and credit.

Again, we need a Central Bank because there must be an institution which will, on the one hand, extend necessary and adequate facilities to banks and provide currency in a way that balances supply and demand, and, on the other, regulate and exercise discipline over other banking institutions, so that the public will have the assurance that the business of banks is being conducted on wholesome lines.

2. This brings us to a description of what is a Reserve Bank. A Reserve Bank is, therefore, a Government bank, or a bank of issue, or a banker's bank according to the point of view or emphasis.

The Bank is, for these reasons, the core and centre of national economy, the inspiration and stimulus of banking activity, the foundation on which rests the edifice of national prosperity.

Its policy and operations affect prices in every market, prices of stocks and commodities. Its well-being means the well-being of the population of the country. When we refer to the Bank's well-being, we do not have in mind the dividend it may pay to shareholders. By well-being is meant that the central banking institution is in full touch with all national economic requirements and acts as a friend, philosopher and guide in regard to those measures that are designed to further national good.

It is, therefore, imperative that a bank of this nature should not be the playing of parties, or the coveted prize of warring communities or sections, or a monopoly of vested interests. The electorate in whose hands will lie the choice of its Directors must be as broad-based as possible. At the same time, the electors should not succumb to partisan cries. The voting right at Reserve Bank elections is more than a privilege, it confers a great responsibility,

We have raised the wind ; we must ride the whirlwind. The votes will now be properly distributed ; we must make sure that the votes will be properly exercised. Towards this end, the popular press must create a healthy public opinion in financial matters. In the choice of men, criteria, somewhat different from those applicable to choice of representatives to legislative councils, will have to be understood and broadcast.

There was hope, in certain quarters, that the Reserve Bank planned on a shareohlders basis would keep the institution in the hands of people amenable to the authorities. That hope has been fortunately scotched. The rule of such a clique would have been a manace.

But the rule of mobocracy may prove a worse danger unless the voting rights are exercised intelligently and dispassionately.

There is, therefore, cause both for gratification and concern in a furious popularity of Reserve Bank shares. The Reserve Bank will be a national asset of inestimable value if it is broad-based on popular support. It can do no good to itself or the country if it is to be based on popular intrigues, schemings, and manouverings. The public have been vouchsafed a privilege ; they must show by their future conduct that they are worthy of it.

Meantime, the public must know more of these shares.

The Reserve Bank is to have a capital of Rs. 5 crores divided into 500,000 shares of Rs. 100 each.

The application list will open on March 22 and will be kept open till March 25. There is no objection to applications being sent in before March 22. But the authorities are careful to add that "such early applications will not receive any preference in t he event of the issue going to allotment nor will they be dealt with before the opening date of the issue."

In fact, there is no question of any preference. There can be no closing of list as soon as applications reach the required total. Whatever applications are received from now to March 25, must be taken into account ; and if there are applications exceeding the amount offered, there will be drawing of lots.

The applicants are thus given full opportunity and ample time to get application forms, study them, gather the moneys, fill in the forms and present them at any one of the hundreds of offices at which subscription will be received. No one need be apprehensive that he will "miss the bus" for want of alacrity or alertness. Everyone can walk down in perfect leisureliness to the bus. The rub will be in case the bus is over-crowded.

If the bus is over-crowded, the solution is not, first come, first served. The drawing of lots will be strictly impartial. It will be supervised by the Central Board assisted by a committee of two elected members of the Assembly and one elected member of the Council of State.

It will thus be seen that the authorities have taken all *bonafide* steps to ensure the distribution of shares as widely as possible and to guarantee that the allotment will be no hole and corner affair. Tom has the same chance as Dick ; and Dick has the same chance as Harry. It can't be fairer than that, can it?

The capital of Rs. 5 crores is allotted to the five territories as under:—

Bombay	register	...	Rs. 140	lakhs
Calcutta	,,	...	,, 145	,,
Delhi	,,	...	,, 115	,,
Madras	,,	...	,, 70	,,
Rangoon	,,	...	,, 30	,,

Now, the provision as regards voting is that any shareholder having less than five shares will have no vote ; a shareholder of five shares will have one vote ; and he will have one vote for each additional five shares subject to the provision that the maximum votes which a shareholder can exercise are ten.

This means that there is no voting value in the case of applications for less than five shares. As there will be heavy over-subscription, applications for more than five shares may receive a maximum of five shares. It seems to us that all applications should be only for five shares. Those who apply for less would not come into the picture ; those who apply for more are only making a futile attempt.

On the understanding that applications will all be for five shares each, there can be allotment to every applicant if the applicants of five shares are for the following number in the respective areas:

Bombay	...	...	28,000
Calcutta	...	...	29,000
Delhi	...	...	23,000
Madras	...	...	14,000
Rangoon	...	...	6,000

From all tokens, it looks as though applications in Bombay and Calcutta will far exceed the above totals ; and Madras, too, may see heavy oversubscription. Delhi and Rangoon will get their quota ; but the applications have a chance of faring better in the drawing of lots.

Applicants in the mofussil will do well to study the application forms carefully and fill them correctly. As they need be in no hurry about it, and as they will have plenty of time to do it in, those who cannot understand English must consult others and arrange that the forms are filled in for them by people who understand them and know how the information asked for is to be written down in English.

There is a rather peremptory warning that "applications in which the forms have not been correctly filled in, or which are incomplete, will be summarily rejected." We hope that while, on the one hand, applicants will take elementary precautions as we have advised, the authorities will not be too hard on upcountry applicants who are not as skilled in these matters as the folk connected with stock exchanges.

Who are eligible to be shareholders?—is the next question about which considerable misunderstanding seems to prevail. We know of countless instances where people had hoped to apply for shares in the names of children, grand-children, cousins, nephews, nieces, and so on and so forth. The first thing to bear in mind in this connection is that minors will not be eligible to apply for shares.

Only an Indian who is domiciled in India and a subject of His Majesty or a subject of a State in India, or a British subject who is ordinarily resident in India but domiciled in the United Kingdom or any part of the Empire is entitled to subscribe for shares. Companies registered in India, or registered in the Empire, but having a branch in India and scheduled banks are entitled to apply for shares. Non-nationals of India and non-British subjects are ineligible.

It will, therefore, be seen that every Indian, who has the means, can subscribe for shares in his name and in that of his family members provided the latter are not minors.

What are the dividend prospects? The minimum dividend is to be 3½ per cent. cumulative. This is, let us add, subject to tax—and not free of tax as is usually the case in the case of dividends on ordinary shares of joint stock companies.

There is also an arrangement for the distribution of surplus profits as between the Reserve Fund, the Government, and shareholders. The arrangement is somewhat complicated ; and to attempt to explain it will be out of place in a Supplement designed to enable the layman to understand the main features of Reserve Bank shares.

But it may be said, in broad terms, that if short-term money rates (that is, Treasury Bills rates and call money rates) become normal, as against the unusual phenomenon of 5 shillings and less for Treasury Bills, the Reserve Bank can hope to make profits sufficient to pay 4 per cent. in two years' time, 4½ per cent. in five years time, and five per cent., say, in eight years' time. Much will depend upon the future tenour of short-money rates, more than the yields on giltedge, as the Reserve Bank will be maintaining a large proportion of its banking assets in domestic and British Treasury Bills and such other strictly short-term securities.

Who are the men in whose hands lies the destiny of the Bank?

The Governor of the Bank is Sir Osborne Smith. He is, far and out, the ablest banker which India has had. He has been Managing Governor of the Imperial Bank of India for seven years and has a consummate and complete knowledge of Indian business and Indian money markets. He was connected with the Australian Commonwealth Bank and has rich central banking experience. He knows the City of London, its men and its markets, its business and its mind ; and he is a most popular figure in London. He knows America as he was the representative of Australia who negotiated the first dollar loan of that Dominion. Indians have the fullest confidence in him. So have the Government. Here is just the round peg in the round hole.

There are two Deputy-Governors. One of them is Mr. J. B. Taylor, who was Controller of the Currency and earnt the goodwill of everyone he came in contact with for his broad outlook and his anxiety to know the other side, and who helped Sir George Schuster in the pilotting of the Reserve Bank Bill and earnet the good opinion of the legislators as being well-informed and helpful in every predicament. The appointment of Mr. Taylor has been well-received in every quarter.

The other is Sir Sikander Hyat Khan, who had an illustrious career in the Punjab ending up as the Governor of he Land of the Five Rivers. He is, he frankly owns, a novice in the art and science of central banking ; but knowledge begins when one knows the limitation of his knowledge. With a 'boss' like Sir Osborne, and a helpful colleague like Mr. Taylor, Sir Sikander, whose strong point is an uncommon measure of commonsense and a free, unfettered and well-poised mind, may be relied on to prove equal to his new task in less than no time.

Of the paid executive, mention must also be made of Rai Bahadur A. C. Mukerjee, who is to be the Chief Accountant and on whom will fall the entire burden of organisation and coordination. Mr. Mukerjee has been, for years, Deputy Controller of the Currency ; and he belongs to the Audit service. He knows accounts ; and he knows currency and cognate questions. He is another round peg in a round hole.

The first Central Board has been constituted. In this connection, we cannot do better than recall the recent observations of Eavesdropper :

> "The composition of the first Board is one on which the Government do deserve to be congratulated. They have brought together as fine a team as is possible in India. There are at least four or five members of that Board who will exercise such influence and have such a big say that the country may rely upon the functioning of that Board in a way that will prove beneficial to India."

The strongest and sturdiest man on the Board is, of course, Sir Purshottamdas Thakurdas. He had the unique distinction of being the President or Vice-President of the Bombay Board of the Imperial Bank for over a decade. It has been generally well-known that the two star men of the Central Board of the Imperial were Sir Purshottamdas and Mr. E. J. Bunbury. It is happy to reflect that an even distribution has now taken place, each having a 'star.'

Mr. F. E. Dinshaw is a real 'catch.' His knowledge of finance, business and industry is unsurpassed. He is strong and silent, firm and understanding. We, for our part, could hardly believe that he would ever consent to sever his connection with the Bank of India. That he has done so is a measure of the persuasive pressure that must have been brought on him, and of his realisation that if his duty by the Bank of India is great, the opportunity of service to the country though the Reserve Bank is greater.

Lala Shri Ram, another notable member of the Central Board, is beloved of all the varied sections in the Federated Chambers ; and he is another strong and silent man. The Reserve Bank has earnt the good opinion of the Indian business community by this popular appointment more than by any other.

Dewan Bahadur M. Ramachandra Rao is an asset to the Bank by virtue of his long public life, his earnestness of character, and his devoted service to the cause of agricultural relief. He may not be able to claim the practical experience of a business-man ; but if ever there be room for an idealist and we believe that there is every need for the width

and breadth which idealists alone can bring—the Reserve Bank is all the richer for his being associated with the Board.

The European business community of India cannot be worthier represented than by Sir Edward Benthall. Head of a leading Clive Street firm, ripe in experience though young in age, knowledgeable but ever keen for more and more knowledge, impressive of mental and physical stature, Sir Edward is an acquisition to any Board. Sir Edward, before his entry into the dust and excitement of politics, was even more likable; and we are happy that the Reserve Bank contact will tend to eliminate a trait which tended to mar a far-spreading reputation.

Scion of a great house, Sir Badridas Goenka is the acknowledged leader of Marwaree business; a community, which has played a far more important part in Indian commerce than any other, must needs be represented on the Central Board; and the choice now made is the happiest and most acceptable.

Sir Homi Mehta, a self-made man, represents industry as one who has risen from the lowest rung in his business career and who has known two important industries from top to bottom. Most others know industry from a distance. Sir Homi knows it inside out.

We may now conclude with answering the last question:—What are the prospects of premium on these shares? They are already quoted Rs. 25 premium. We understand, as a matter of fact, that business has been done at Rs. 125 per share of Rs. 100. Doubtless, the range of the premium will depend on the actual proportion of over-subscription. If the issue is over-subscribed twice over, it may be Rs. 50 premium. If thrice over, it may be Rs. 75 and so on. But the rise inspired by this factor must prove short-lived.

Nor should we encourage any frenzied gambling in these shares. Their intrinsic value may be put at Rs. 125, in relation to the 3½ per cent. assured yield.

As we anticipate a gradual rise in the dividend to 5 per cent. in eight years, the shares must move up to Rs. 150.

It may be stated, in general terms, that any hectic trading which takes these shares beyond Rs. 150 must be sternly put down by stock exchange authorities.

There is an impression abroad that as the first Board of Directors has been nominated by the Government, it may be long before the voting rights of shareholders will come into active force. This impression is wrong.

For, Section 16 of the Reserve Bank of India Act provides that "as soon as may be after the commencement of this Act," elections are to be held for the constitution of the local board. The local board shall consist of five members elected from amongst themselves by the shareholders who are registered on the register for that area and are entitled to vote, and not more than three members nominated by the Central Board from amongst the shareholders registered on the register of that area, who may be nominated at any time.

The voters in each of the respective areas will, therefore, be called upon to elect five Directors for each territory; and the election may be expected to take place in May or June. There is thus an early opportunity for testing the capacity and judgment of the voters.

According to the constitution devised for the Bank, the elected members of a local board shall, as soon as may be, after they have been elected, elect from amongst themselves one or two persons, as the case may be, to be Directors (that is, of the Central Board) representing the shareholders on the register for the area for which the Board is constituted. This right, however, shall not be exercised in the first year.

As Directors on the Central Board retire in terms of the rotation provided in Section 4 of Clause 15, the local board selected by lot shall begin to exercise the right to send Directors to the Central Board. The Clause in this regard reads as under:—

> On the expiry of each successive period of twelve months after the nomination of Directors under sub-section (3) two Directors shall be elected in the manner provided in section (9) until all the Directors so nominated have been replaced by elected Directors holding office in accordance with section (8). The register in respect of which the election is to be held shall be selected by lot from among the registers still represented by nominated Directors, and for the purpose of such lot the Madras and Rangoon registers shall be treated as if they comprised one register only.

It will thus be seen that while the voters will be asked to exercise their votes in the next quarter, their representatives on the local board will start getting their chance from a year hence.

The following Communique has been received from the Reserve Bank Authorities:—

It has been decided for the convenience of intending subscribers in outlying districts that applications may be lodged at such places as soon as copies of the Prospectus are available, but such early applications will not receive any preference in the event of the issus going to allotment, nor will they be dealt with before the opening date of the issue.

IMPERIAL BANK OF INDIA.

NOTICE is hereby given that as from 25th March, 1935, the management of the Debenture Loans of the following public bodies:—

CALCUTTA MUNICIPALITY
CALCUTTA PORT TRUST
CALCUTTA IMPROVEMENT TRUST

and the payment of interest in Calcutta on enfaced debentures of similar bodies in Bombay and Rangoon, will be transferred from the Public Debt Office, No. 8, Council House Street, to the Imperial Bank of India Head Office, No. 3, Strand Road.

B. A. C. NEVILLE,
Secretary and Treasurer.

IMPERIAL BANK OF INDIA,
Calcutta, 6th March, 1935.

IMPERIAL BANK OF INDIA.

NOTICE is hereby given that as from 25th March, 1935, the business of the GOVERNMENT ACCOUNT DEPARTMENT of the Imperial Bank of India, Calcutta, will be carried on at No. 8, Council House Street.

B. A. C. NEVILLE,
Secretary and Treasurer.

IMPERIAL BANK OF INDIA,
Calcutta, 6th March, 1935.

PROSPECTUS

The Reserve Bank of India

[Incorporated under the Reserve Bank of India Act (II of 1934.)]

Issue for public subscription of shares of the Reserve Bank of India of Rs. 100 each

The shares are issued subject to the provisions of the Reserve Bank of India Act (II of 1934) and allotment will be made in accordance with section 4 of that Act, an extract of which is attached.

Under Notification No. D. 825-F, dated the 2nd March 1935, issued by the Governor General in Council under section 47 (extract attached) of the Reserve Bank of India Act, the cumulative dividend to be payable in accordance with the provisions of that section of the Act is fixed at the rate of 3½ per cent. per annum.

---

1. Applications will be received from the 22nd March 1935 to the 25th March 1935, both days inclusive, from persons qualified to be registered as shareholders in one of the areas defined in the First Schedule of the Reserve Bank of India Act (copy attached), subject to the proviso that if at any time before the last date mentioned above the number of applicants who have applied for 5 or more shares each in any particular area exceeds one-fifth of the total number of shares assigned to that area [*vide* section 4 (5) of the Act], the acceptance of further applications for less than 5 shares may be thereafter discontinued in that area without previous notice to the public.

(Applications sent in before the opening date will be accepted but such early applications will not receive any preference in the event of the issue going to allotment nor will they be dealt with before the opening date of the issue. Applications may also be sent by post, but should be accompanied by the requisite remittance.)

Applications will be received at—

(*a*) any Local Head Office or Branch of the Imperial Bank of India in India;

(*b*) any treasury at the headquarters of a district in British India where there is no branch of the Imperial Bank of India, and

(*c*) any Head Post Office in India.

Applications should be made at an office situated in the particular area in which the applicant is qualified to be registered as a shareholder. A list of the various offices that will be receiving applications in each area is attached (Appendix I). No subscriber should make more than one application.

NOTE.—An application from a corporate body may be signed on its behalf by a duly constituted attorney. In every other case the application must be signed by the applicant himself, and in the case of an application for joint holding, by all the joint applicants. Except as above, applications will not be received if signed by one person on behalf of another (*e.g.*, an attorney, a guardian), nor will applications be received from firms in the firm name.

(Application forms may be obtained free of charge at any of the offices mentioned above.)

2. Applications must be in English in the form attached and must be accompanied by the tender of the full purchase price of the shares applied for.

(N.B.—Applications in which the forms have not been correctly filled in, or which are incomplete, will be summarily rejected.)

3. Payment must be made in cash or by cheque on a bank situated at the place at which the application is being made. Cheques should be drawn in favour of the office at which the application is presented.

4. The price of one share is Rs. 100.

5. The attention of intending subscribers is invited to the provisions of sections 4, 47, 48 and 57 of the Reserve Bank of India Act (Act II of 1934), extracts of which are attached.

6. Allotment letters will be issued to the subscribers whose applications have been accepted, in full or in part, by the Central Office of the Reserve Bank of India through the respective offices at which the relative applications were received as soon as practicable after allotment.

7. Refunds of subscriptions, or portions of subscriptions in respect of which no shares have been allotted, will be made as soon as possible after allotment. If, however, the contingency mentioned in the proviso to paragraph 1 above materialises, arrangements will be made to refund the money earlier. Without waiting for the allotment the whole amount received from applicants for less than 5 shares and the amount representing the excess over the purchase price of 5 shares received from applicants for more than 5 shares will be returned to the persons concerned at the earliest opportunity. The balance of the amount received from the latter will be refunded after the allotment has been made if the applicant has not been allotted any shares. *No interest will be paid on any amount so refunded.*

8. Allotment letters will be exchanged for share certificates as soon as can be conveniently arranged. One share certificate will be issued to each allottee in respect of the total number of shares allotted to him. An announcement will be made in the press by the Central Board of the Reserve Bank of India when the certificates are ready for issue. The holders of these allotment letters should then send them to the Secretary to the Central Board, Reserve Bank of India, 8, Council House Street, Calcutta, by registered post. The share certificates will be delivered to the holders from the office at which the applications were tendered.

By order of the Central Board of Directors
of the Reserve Bank of India.

S. S. RACHHPAL,
Secretary to the Central Board.

THE RESERVE BANK OF INDIA ACT (II OF 1934).

SECTIONS 4, 47, 48 AND 57.

(See preamble to and paragraph 5 of the Prospectus.)

4. (1) The original share capital of the Bank shall be five crores of rupees divided into shares of one hundred rupees each, which shall be fully paid up.

(2) Separate registers of shareholders shall be maintained at Bombay, Calcutta, Delhi, Madras and Rangoon, and a separate issue of shares shall be made in each of the areas served by those registers, as defined in the First Schedule, and shares shall be transferable from one register to another.

(3) A shareholder shall be qualified to be registered as such in any area in which he is ordinarily resident or has his principal place of business in India, but no person shall be registered as a shareholder in more than one register; and no person who is not—

(*a*) domiciled in India and either an Indian subject of His Majesty or a subject of a State in India, or

(*b*) a British subject ordinarily resident in India and domiciled in the United Kingdom or in any part of His Majesty's Dominions the Government of which does not discriminate in any way against Indian subjects of His Majesty, or

(*c*) a company registered under the Indian Companies Act, 1913, or a society registered under the Co-operative Societies Act, 1912, or any other law for the time being in force in British India relating to co-operative societies or a scheduled bank, or a corporation or company incorporated by or under an Act of Parliament or any law for the time being in force in any part of His Majesty's Dominions the Government of which does not discriminate in any way against Indian subjects of His Majesty, and having a branch in British India,

shall be registered as a shareholder or be entitled to payment of any dividend on any share, and no person, who, having been duly registered as a shareholder, ceases to be qualified to be so registered, shall be able to exercise any of the rights of a shareholder otherwise than for the purpose of the sale of his shares.

(4) The Governor General in Council shall, by notification, in the *Gazette of India*, specify the parts of His Majesty's Dominions which shall be deemed for the purposes of clauses (*b*) and (*c*) of sub-section (3) to be the parts of His Majesty's Dominions in which no discrimination against Indian subjects of His Majesty exists.

(5) The nominal value of the shares originally assigned to the various registers shall be as follows, namely—

(*a*) to the Bombay register—one hundred and forty lakhs of rupees;

(*b*) to the Calcutta register—one hundred and forty-five lakhs of rupees;

(*c*) to the Delhi register—one hundred and fifteen lakhs of rupees;

(*d*) to the Madras register—seventy lakhs of rupees;

(*e*) to the Rangoon register—thirty lakhs of rupees:

Provided that if at the first allotment the total nominal value of the shares on the Delhi register for which applications are received is less than one hundred and fifteen lakhs of rupees, the Central Board shall, before proceeding to any allotment, transfer any shares not applied for up to a maximum nominal value of thirty-five lakhs of rupees from that register in two equal portions to the Bombay and the Calcutta register.

A Committee consisting of two elected members of the Assembly and one elected member of the Council of State to be elected by non-official members of the respective Houses shall be associated with the Central Board for the purpose of making public issue of shares and looking after the first allotment of shares.

(6) In allotting the shares assigned to a register, the Central Board shall, in the first instance, allot five shares to each qualified applicant who has applied for five or more shares; and, if the number of such applicants is greater than 1/5th of the total number of shares assigned to the register, shall determine by lot the applicants to whom the shares shall be allotted.

2 *

(7) If the number of such applicants is less than 1/5th of the number of shares assigned to the register, the Central Board shall allot the remaining shares firstly, up to the limit of one half of such remaining shares, to those applicants who have applied for less than 5 shares, and thereafter as to the balance to the various applicants in such manner as it may deem fair and equitable, having regard to the desirability of distributing the shares and the voting rights attached to them as widely as possible.

(8) Notwithstanding anything contained in sub-sections (6) and (7), the Central Board shall reserve for and allot to Goverment shares of the nominal value of two lakhs and twenty thousand rupees to be held by Government for disposal at par to Directors seeking to obtain the minimum share qualification required under sub-section (2) of section 11.

(9) If, after all applications have been met in accordance with the provisions of sub-sections (6), (7) and (8), any shares remain unallotted, they shall, notwithstanding anything contained in this section, be allotted to and taken up by Government, and shall be sold by the Governor General in Council as soon as may be, at not less than par, to residents of the areas served by the register concerned.

(10) The Governor General in Council shall have no right to exercise any vote under this Act by reason of any shares allotted to him under sub-section (8) or under sub-section (9).

(11) A Director shall not dispose of any shares obtained from Government under the provisions of sub-section (8) otherwise than by re-sale to Government at par, and Government shall be entitled to re-purchase at par all such shares held by any Director on his ceasing from any cause to hold office as Director.

* * * * *

47. After making provision for bad and doubtful debts, depreciation in assets, contributions to staff and superannuation funds, and such other contingencies as are usually provided for by bankers, and after payment out of the net annual profits of a cumulative dividend at such rate not exceeding 5 per cent. per annum on the share capital as the Governor General in Council may fix at the time of the issue of shares, a portion of the surplus shall be allocated to the payment of an additional dividend to the shareholders calculated on the scale set forth in the 4th Schedule and the balance of the surplus shall be paid to the Governor General in Council:

Provided that if at any time the Reserve Fund is less than the share capital, not less than fifty lakhs of rupees of the surplus, or the whole of the surplus if less than that amount, shall be allocated to the Reserve Fund.

* * * * *

48. (1) Notwithstanding anything contained in the Indian Income-tax Act, 1922, or any other enactment for the time being in force relating to income-tax or super-tax, the Bank shall not be liable to pay income-tax or super-tax on any of its income, profits or gains:

Provided that nothing in this section shall affect the liability of any shareholder in respect of income-tax or super-tax.

(2) For the purposes of section 18 of the Indian Income-tax Act, 1922, and of any other relevant provision of that Act relating to the levy and refund of income-tax any dividend paid under section 47 of this Act shall be deemed to be "Interest on Securities".

* * * * *

57 (1) Nothing in the Indian Companies Act, 1913, shall apply to the Bank, and the Bank shall not be placed in liquidation save by order of the Governor General in Council and in such manner as he may direct.

(2) In such event the Reserve Fund and surplus assets, if any, of the Bank shall be divided between the Governor General in Council and the shareholders in the proportion of 75 per cent. and 25 per cent., respectively:

Provided that the total amount payable to any shareholder under this section shall not exceed the paid-up value of the shares held by him by more than 1 per cent. for each year after the commencement of this Act subject to a maximum of 25 per cent.

THE RESERVE BANK OF INDIA ACT (ACT II OF 1934).

THE FIRST SCHEDULE.

(See paragraph 1 of the Prospectus.)

Areas served by the various Share Registers.

I. THE WESTERN AREA, served by the Bombay Register, shall consist of—

the Bombay Presidency including Sind, the Central Provinces, Berar, Hyderabad, Baroda, Khairpur, the Western India States, the Central India States (including Makrai but excluding Rewah and other States of Bundelkhand and Baghelkhand), the Gujerat States, Kolhapur and the Deccan States.

II. THE EASTERN AREA, served by the Calcutta Register, shall consist of—

the Bengal Presidency, Bihar and Orissa, Assam, Sikkim, Manipur, Cooch-Behar, Tripura, the Eastern States, Rewah and other States of Bundelkhand and Baghelkhand, and the Khasi States.

III. THE NORTHERN AREA, served by the Delhi Register, shall consist of—

the United Provinces, Delhi, the Punjab, the North-West Frontier Province, Ajmer-Merwara, Baluchistan, Kashmir, the Punjab States, excluding Khairpur, the Simla Hill States, Dujana, Pataudi, Kalsia, Rampur, Tehri-Garhwal, Benares, the Rajputana States including Palanpur and Danta, Gwalior, Khaniadhana, Kalat, Las Bela, Hunza, Nagir, Amb, Chitral, Dir, Phulera and Swat.

IV. THE SOUTHERN AREA, served by the Madras Register, shall consist of—

the Madras Presidency, Coorg, Mysore and the Madras States.

V. THE BURMA AREA, served by the Rangoon Register, shall consist of—

Burma, the Andaman and Nicobar Islands, Bawlake, Kantarawadi and Kyebogyi.

THE FOURTH SCHEDULE.

(See section 47.)

Scale of Additional Dividend Payable to Shareholders.

A. If the maximum rate of dividend fixed under section 47 is five per centum and so long as the share capital of the Bank is five crores of rupees—

(1) if the surplus does not exceed four crores of rupees—*Nil ;*

(2) if the surplus exceeds four crores of rupees—

(*a*) out of such excess up to the first one and a half crores of rupees—a fraction equal to one-sixtieth ;

(*b*) out of each successive additional excess up to one and a half crores of rupees—one-half of the fraction payable out of the next previous one and a half crores of excess :

Provided that the additional dividend shall be a multiple of one-eighth of one per cent. on the share capital, the amount of the surplus allocated thereto being rounded up or down to the nearest one-eighth of one per cent. on the share capital.

B. If the maximum rate of dividend fixed under section 47 is below five per centum, the said fraction of one-sixtieth shall be increased in the ratio of the difference between six and the fixed rate to unity.

C. When the original share capital of the Bank has been increased or reduced, the said fraction of one-sixtieth shall be increased or diminished in proportion to the increase or reduction of the share capital.

WORLD OF INDIAN FINANCE

Calcutta, March 8.

There is no change in the money situation. Credits continue as dear as ever. Borrowers are prepared to pay full rates. But lenders cannot be forced for the simple reason that the lenders are few and far between. One might have expected that the discontinuance of intermediate Treasury Bills and the reduction of the weekly offer on auction days from Rs. 1½ crores to Rs. 1 crore might have caused a relaxation in the monetary stringency. Expectations of this kind have been disappointed. From which we may conclude that a fair proportion of the funds released from Treasury Bills Maturities must be reaching the coffers of the Imperial Bank. For more than half the total of the floating debt, it has, for long, been a mere matter of changes of book entry as between the Government and the Imperial Bank. This fact is brought into prominence by the money market developments in the last fortnight. It was announced, on Thursday, that the Government have expanded currency for Rs. 3 crores against the transfer of sterling securities for £2¼ million from the Home Treasury to the London branch of the Paper Currency Reserve. In the first place, currency expansion ought to have taken place long ere this. Delay hath made the heart so sick that no special enthusiasm was aroused by the first expansionist operation of Sir James Grigg. In the second place, expansion of Rs. 3 crores is but a flea-bite. The current monetary situation demands a far bigger dose of reflation. It is not as though the market asks for mercy or charity in the matter of currency expansion. All that it asks and demands is that the sterling exchange standard should be worked in such a way as to render its functioning as automatic as possible. That is to say, any withholding of expansion of currency against sterling purchases in excess of the budgetted programme, is a needless interference with the working of the currency standard. This interference results in the creation of artificial money stringency, the curing of which is proving as difficult as the smoothening of the repercussions arising from that stringency. If a stitch in time can save nine, expansion in time can forearm the money market against nine different dangers.

In the third place, in the situation that has now arisen, expansion unaided by other essential measures cannot take us far. Steps must now be taken for transferring the additional currency to the market circles. One of the most effective measures for carrying out this objective, is the purchase of securities in the open market. Are the Government prepared to do it? Or will they again shilly-shally as they did in the case of expansion? Will they take proper steps only when the market is in a desperate plight? We may be told that in this last month of currency administration by the Government, the latter would be none too willing to take on any large commitments by way of open market operations. There are, it may be argued, a bare three weeks before the Reserve Bank will start functioning; and why not let things lie over till the Bank comes into being and assumes the responsibility in these and like matters? If this line of reasoning be accepted, it may well happen that the Reserve Bank in its turn will argue that it has just commenced business; that it has not yet got into stride; that it must take a few months before it launches on operations of this nature. For postponing action, numberless pretexts can be found. But the situation demands the person who can give the one supreme reason why action is now urgent and imperative.

It must be added, however, than though this currency expansion left the market cold immediately on the announcement yesterday, to-day's trading conditions showed some improvement, mainly because of the confidence inspired by this gesture of expansion. 3½ per cent. Rupee Paper which had declined to Rs. 95-10 rose to Rs. 96-7. Howrah shares improved to Rs. 62-12 from Rs. 61-10. The bigger-sized jute shares showed recovery of Rs. 15

to Rs. 20. A brighter sentiment seems to prevail, but it is as yet too early to say that such rally as has taken place is the result of restored confidence. Operators are still looking London-wards. If sterling depreciates further and if giltedge in the London market registers further regress, all the effect of yesterday's expansion would be lost.

Some ground has been won to-day ; but one is not sure that the market has the stamina and grit to retain the gains. The morale of the market is shattered. Its psychology is one of proneness to depression. One bearish factor can now have more influence than five bullish factors. In such a situation, something positive, something striking, something that will appeal to the imagination and capture the confidence is essential. We believe, as firmly as we did last week, that the budget must be acclaimed as extremely favourable to the stock markets. But we would be failing in our duty if we did not warn Sir James Grigg that the market itself has not taken as favourable a view of the budget as we have done ; and that proper and energetic measures are due from him if the market is to appreciate the budget at its true worth. Meantime, we may express our gratitude for little mercies. After a truculance of three months, it is some comfort to know that our repeated appeals for currency expansion has at last evoked some response, be it ever so meagre.

The prospectus of the Reserve Bank has been issued ; and the Special Supplement which *Indian Finance* issued this morning analyses the prospectus from all points of view. For purposes of this column, it is necessary to examine how far the rush of applications for Reserve Bank shares will have any effect on the money market. It is generally expected that the applications will be so heavy that, in most of the areas, drawing of lots would be found necessary. It must be added that the full amount of the shares is to be paid. It will, therefore, mean that an amount much in excess of Rs. 5 crores will be diverted to the Reserve Bank. In the present condition of the Indian money market, the withdrawal of so large a sum is bound to accentuate the stringency. By way of qualification, it must, however, be mentioned that a good part of the amount will come from the mofussil. Such sums as are paid in respect of upcountry applications will represent funds that are withdrawn from non-money market sources. And even in the cities applications will be only for small amounts, as it is known that only such small applications have the best chance. However, there is bound to be some diversion of funds. With surplus resources practically nil in financial circles, even the withdrawal of comparatively small amounts for Reserve Bank shares, may have an exaggerated effect. We should, therefore, suggest that this is another important and powerful reason why the Government should immediately expand more currency and also take steps to release the additional currency to the market through open market purchases of securities.

The exchange market has been quiet. The rupee-rate has displayed a weakening tendency. It started off at 1s. 6 1/8d. In the later days, banks were sellers at 1s. 6 3/32d., for all March T.T. But if they came out to sell or buy for any large amounts, not much could have been available. The market was hesitant and uncertain. There are no bills showing.

The closing rates are: 1s. 6 3/32d., March T.T. ; 1s. 6 1/16d., April T.T. ; 1s. 6 1/32d., May T.T. and possibly June T.T. ; and 1s. 6d., Monsoon months T.T.

Bills may be quoted: 1s. 6 3/16d., March ; 1s. 6 5/32d., April ; 1s. 6 1/8d., May and possibly June ; and 1s. 6 3/32d., July-Monsoon months.

Money was in continuous and strong demand. The quotable rate for interbank call money was 3¼ per cent. all borrowers and no lenders. On occasions, there seemed to be a slight easiness but it was nothing worth mentioning. Firms' money for call and three days' notice was quoted 1 per cent. Onemonth and twomonth deposits quoted 1¼ per cent. ; threemonth deposits 1½ per cent. while sixmonth and twelvemonth deposits were 1¾ and 2 per cent. respectively.

Friday evening.

The week is assured of a prominent place in the review of this year when it comes to be written at the beginning of 1936. For it is remarkable for a headlong decline of sterling both in relation to the franc and in relation to the dollar. The sterling-dollar rate has fallen from 4.85 at the end of last week to 4.74 at the end of Thursday last. Likewise, the sterling-franc rate has dropped to 70.90 from the level of 72 on Thursday last week. The press reports are positive that London is not seriously disturbed by the decline in sterling ; and it has been added significantly that the fall, which began on Saturday last, did not disturb the usual golf of the Citymen on that day. This complacency only means that the City, as well as the authorities, do not apprehend any serious disability for the national economy as a result of the fall in the pound. This is more or less obvious; for, so long as the decline in the pound cannot be interpreted as reflecting a weakness in the national economy or the development of a seriously adverse balance of payments, there is no reason to regard it with apprehension. On the other hand, when the decline in sterling is the result of the movement of funds, it might even betoken the attainment of an unexpected advantage for British industry in its competition with its foreign rivals. It may also be that the City expects that the decline in sterling will hasten the development of a crisis in the general unsettled conditions of international finance and will force the hands of the authorities of the gold standard countries and, particularly, the Continental gold block in regard to the question of the exchanges. It is this possibility, more than even the advantage of competition in foreign markets, that has induced the City and the British authorities to look with very near approval on the developments of the week.

It is necessary, in the first place, to examine in some detail the causes of the downward movement of sterling which began nearly a fortnight ago and has been tremendously accelerated during the week under review. The causes have, to some extent, already been indicated in these columns previously. The most potent factor is the movement of foreign funds away from London. It is well-known that the Wavertree elections raised the fear that Britain is on the eve of a radical change of Government and policy. Continental operators therefore, thought that they would be well advised to withdraw their funds from London. In the formation of this opinion, the shock to confidence administered by the crisis in the commodity markets has also a large place. But during the week the Continent has been, in the words of a press report, "talking down" sterling. Those, who had beared sterling, must also have been encourage dby the feeling that the British Exchange Equalisation Fund has far less of resources at its disposal for the maintenance of sterling than before and cannot impede effectively the downward movement. It will be seen that there is no circumstance in the present conditions which may be said to reflect adversely on the state of national economy, though, it must be said, that the estimates of the balance of payments recently published by the Board of Trade, do not point to a very healthy position. But the adverse balance is not so much as to destroy confidence in the British currency.

The fall in sterling is important not so much in itself as in the possibilities it opens up. There can be no doubt that a sterling-franc rate of nearly 70 will be a serious embarrassment for the French Government. In fact, any wide movement of the franc has its own problems for France. When the dollar was waxing strong as a result of the uncertainties of the Gold Clause decision and the franc sank below gold export point, the authorities were seriously perturbed. And now when the franc has risen to 71 in relation to the pound, there is an equal degree of embarrassment. It is reported that the technical service of the French Ministry of Finance were directed to work out fully the position of the Bank of France and the national financial system and debt service under various degrees of devaluation of the French currency. The work it is said, has been completed at the following degrees of devaluation, 5, 10, 15, 20, 25 and 30 per cent. It is said to be so complete that at a moment's notice the authorities will be in a position to see exactly the situation that would arise if a decision were made suddenly to devaluate the franc in terms of gold. It is not known whether these estimates were made before the present decline in sterling or during its course. It could not, of course, have been difficult for the French Government to anticipate such a contingency and provide themselves with the estimates that would then be necessary. But if, indeed, such calculations of the Ministry of Finance had been made two or three weeks ago, one might suggest however far-fetched it might seem—and it is, no doubt, far-fetched—that the present fall in sterling has the approval of the French Government, the idea being that such a sharp decline of sterling would provide a satisfactory excuse for the devaluation of the franc, which since the turn of the year has seemed more and more inescapable.

As observed already, this is too far-fetched. For one thing, it has not been possible to get any inkling of the real attitude of the French Government to the question of devaluation. Even at the time the new monetary policy was inaugurated by the French Government, we had the intriguing spectable of the Premier stressing the need for cheap money at one end and the Minister of Finance holding forth assurances about the stability of the franc on the other. But public opinion in France has been moving farther away from the professed official policy of deflation.

For France will now have to reckon with a pound which is not very much higher than 70 francs. During the years following the abandonment of the gold standard, there have been very rare instances of the pound regaining what it had lost in its exchange value with gold and gold currencies. The official British policy is most conveniently framed. At no time have the British Government professed any desire to increase the gold value of their currency. While they have always been anxious to prevent undue fluctuations, a lower gold value for the pound has never been other than welcome to them. If, then, there is no possibility of any considerable rise in sterling, then France will have to examine the question whether her financial policy will not have to be readjusted to this change.

So far as America is concerned, the fall in sterling has obviously two aspects. In the first place, a lower external value for sterling is far from welcome to American industry ; and Americans cannot be expected to concur with the view of the British Chancellor of the Exchequer that sterling has in the past been overvalued in terms of the dollar. But at the moment it would seem that America is inclined to welcome the fall in sterling on the ground that it is calculated to force the French Government to consider devaluation.

PUBLICATIONS OF THE LEAGUE OF NATIONS

"BALANCES OF PAYMENTS, 1933"

Only existing statistical book of reference concerning international accounts (trade in goods and services, gold, long and short-term capital operations). Figures, are given for 32 countries, in the majority of cases for a series of years up to 1933 inclusive. Information is also supplied concerning outstanding international liabilities and assets. In a summary chapter the general tendencies up to September, 1934, are dealt with, special consideration being given to the effect of currency depreciation.

Price: Rs. 4-2-0

"ARMAMENTS' YEAR-BOOK, 1934"

This edition contains monographs on 64 countries, both members and non-members of the League. The information contained is derived from two sources: the communications from various Governments to the Secretariat on the occasion of the Conference for the Reduction and Limitation of Armaments and the official publications of the different countries, such as collections of laws, army gazettes, etc.

Price: Rs. 13-12-0

"NATIONAL PUBLIC WORKS"

This book has just been issued by the Communications and Transit Organisation of the League of Nation and is the result of a letter addressed by the Secretary General of the League requesting various Governments to communicate to him the following particulars: (1) A brief description of the main public works undertaken since the beginning of the year 1929; (2) The principal administrative methods followed or contemplated for the execution of such work; (3) The principal methods employed for financing such work; (4) An estimate, as far as possible, of the allocation of expenditnre on the execution of the possible works.

Price: Rs. 8-4-0

"INTERNATIONAL TRADE STATISTICS, 1933"

This volume analyses the foreign trade during the years 1931, 1932 and 1933 of 65 countries accounting for 95% of the total world trade. It contains more than 300 tables, which are accompanied by explanatory notes. The data it gives illustrate strikingly the great changes undergone in recent years in the composition and direction of foreign trade, and their effect in the position of the individual countries. The synoptical tables show the percentage distribution of each country's imports and exports by provenance and destination.

Price: Rs. 6-14-0

WHAT MEANS 'FRESH BORROWING'?

It seems to us that there is still considerable misunderstanding about the actual implications of the borrowing programme for the next financial year as announced in the budget speech of Sir James Grigg. As we pointed out in our *Budget Supplement*, such misapprehensions as have been prevalent are due to the words 'fresh borrowing' in the following passage: "Allowing for a remittance of £26 million we anticipate that we could meet all these liabilities without receiving more than Rs. 25 crores by fresh borrowing." We examined, in full detail, the ways and means position as disclosed in the budget speech ; and we proved that a good part of the maturing loans of 1935-36 would be found from the resources available to the Finance Member from the Debt Redemption Fund, the Railway Depreciation Fund, Postal Cash Certificates, Postal Savings Bank deposits, and other and similar funds. We should have thought that the explanation, which was furnished in these columns, should have removed all misunderstandings, and enabled the market to realise that against a total redemption of loans for Rs. 59 crores, in India and in England, the Finance Member would raise only 25 crores. A recent issue of the weekly circular issued by a leading firm of Bombay brokers leads us to think that operators in the Western Capital are still inclined to give a wrong interpretation to the words 'fresh borrowing.' The circular, to which we have just referred, says that the borrowing programme of Rs. 25 crores is "considered by bull operators as somewhat large." Does this mean that bull operators believe that the Finance Member proposes to borrow Rs. 25 crores in addition to the sums required for the redemption of the loans?

* * *

If it is proved that the borrowing programme for 1935-36 will be for a cash loan of Rs. 25 crores plus conversion of the maturing loans, then, and only then, must the ways and means budget be pronounced extremely bearish to giltedge. But this is not the case. at the time when we made an analysis of the ways and means situation in our *Budget Supplement*, we had to construct a good part of the story, as we did not have before us, at that time, a copy of the Explanatory Memorandum of the Financial Secretary. We have now received the Explanatory Memorandum ; and we are glad that the main lines of our arguments and most of the figures we gave are now proved substantially correct. Against the Rs. 50.42 crores required for the discharge of permanent debt, (this does not include the Bombay Development), the Finance Member hopes to get the requisite resources from the following heads:

(1) New Loan Rs. 25.00 crores;
(2) Post Office Cash Certificates Rs. 2.75 crores;
Post Office Savings Banks deposits Rs. 8.78 crores;
(4) Other unfunded debt Rs. 6.58 crores;
(5) Reduction or avoidance of debt Rs. 3.00 crores;
(6) Railway Depreciation Fund Rs. 1.89 crores; and
(7) Cash Balance Investment Account Rs. 5.37 crores.

If it can thus be proved, beyond the shadow of any doubt, that while the Government will be repaying about Rs. 60 crores, he will ask the market to put up only Rs. 25 crores, can there be a bigger bullish factor for the giltedge market? So far as the Indian market is concerned, the position is this: The Government will repay Rs. 16 crores in respect of 6½ per cent. 1935 bonds; Rs. 11.4 crores on 5 per cent. 1935 bonds; and Rs. 9.39 crores on 6½ per cent. Bombay Development loan. The total comes to Rs. 37 crores. Against this, the maximum loan in India is Rs. 25 crores. But as we pointed out in the *Budget Supplement*, it may well be that out of the Rs. 25 crores, anything like the equivalent of Rs. 15 crores will be raised in London in the form of a conversion loan in respect of the 6 per cent. 1935-36 India sterling bonds. This may leave a bare Rs. 10 crores as the new loan issue in India. Let us again reember that while the market may part with only Rs. 10 crores, it will receive Rs. 37 crores.

VALUE AND VALUATION.

The most perplexing feature of the economic depression is that it forms a mine of argument alike for Socialists and Capitalists. While the Socialist can make out that such an impasse is inevitable in any practicable scheme of individualist economic society, the individualist can also regard it as a proof of the danger of excessive interference with the working of natural economic laws. Though it is commonly supposed that the economic depression has tilted the balance of argument in favour of the Socialist, it has, in fact, only demonstrated that the issue is virtually interminable. What the depression has done is to correct the average man's prejudice in favour of a predominantly individualist economic organisation and even to predispose him in favour of the rival forms. In democratic countries, this swing of public opinion raises the fear that Socialists may be confronted with a premature demand on them for delivering the goods. And under the stimulus of such an apprehension, Socialist plans have, indeed, made a great deal of progress during recent years. But even a Socialist may confess that the growth of popularity for the ideals of Socialism is somewhat out of proportion to the progress in the perfection of Socialist plans and theories. The shrewd business instinct of capitalists, who are interested in public policy and changes in economic organisation, has enabled them to devise forms of planned economy, which are ostensibly concessions to the Socialist standpoint, but which are really attempts to make individualism safer for the capitalist. The political support for such "plans" comes from the *petite bourgoisie*, who naturally form the rank and file of the Fascist movement in all countries.

* * *

In these circumstances, the orthodox economist is in an unenviable predicament. The capitalists, who choose to support the demand for a planned economy, are virtually forsaking the supporters of economic individualism. And the economist is well aware of the fact that it has all the defects of the two rival systems and none of their virtues, that it

is doomed to break down and that the breakdown must open the floodgates of Socialism. The Socialists apprehend these facts equally clearly and are preparing themselves for such an eventuality. It may be said, therefore, that the vogue of planned economy has created a crisis in thought and affairs ; and for the first time Socialists and Individualists have come to grips in the realm of theory.

* * *

One would expect that the result would be a considerable clarification of the outstanding issues. This has not happened for the simple reason that the common ground of discussion has not been clearly marked off. Individualists labour under the obvious difficulty that, while they have a working model of the economic organisation, which they advocate, in the *laissez faire* free trade of pre-War times, there is not on the socialist side any tangible target at which they can shoot with precision. It is natural that there should be no working model of a Socialist organisation. But even a cut and dried Socialist scheme is lacking. Socialists differ a great deal among themselves when they come to practical schemes. And even in the realm of theory, while Socialism is, no doubt, a body of systematic thought, there has been as yet no systematic exposition of even well-established tenets. Individualists might, and often do, express regret that there is no authoritative exposition. But it is too much to expect that they will not avail themselves of this tactical advantage, especially as they know that they will not be exposing themselves to any clear charge of unfairness or misrepresentation. They, therefore, proceed to criticise not Socialism as a whole, for it has not been presented as a whole, but only the various Socialist principles, in settings to which the Socialists have not clearly signified their assent. In other words, individualist economists have so far carried on only a kind of guerilla warfare which is, no doubt, spectacular in its execution, but is by no means an effective disablement of the enemy.

* * *

As has been observed already, this cannot be otherwise. The central issue between socialism and individualism which can form the subject of objective discussion, has not been clearly defined. Broadly speaking, individualism and Socialism stand for two different sets of values ; and the economic organisation, which each advocates, is suited to the realisation of such values. In this view the question is one of choice of values, and is, therefore, purely subjective. On a question involving subjective choice of values, no science, least of all economics, can have anything decisive to say. If the question is to be brought within the scope of objective discussion, it has to be posed in a different manner. For those who have given thought to the nature and significance of economic science, it should be obvious that as a science, economics can have nohing to say about a scale of subjective values. The old fashioned distinction between material and immaterial values, the former constituting the legitimate domain of economic enquiry, will not stand any logical test, apart from its exposing the study to the taunt of being a "dismal science", "pig-philosophy" and the like. If Economics is to have a field of enquiry with a reasonable demarcation from those of other sciences, it can only be regarded as the study of the relation of scarce means to alternative ends. Once the fact of scarcity of means and the multiplicity of ends to which these scarce means can be put are clearly recognised, the relation between ends and means gain an objectivity which enables a scientific enquiry. The question may then arise whether an individualist or a socialist form of economic organisation will be better suited for attacking this perpetual problem of the relation between means and ends. It will, of course, be necessary to enquire how far the assumptions underlying the statement of the issue in these terms is true and, even if they are true at any given time, what degree of universality may be claimed for them.

* * *

As it is, individualists may be said to have emerged from the state of guerilla warfare only to the extent that they have directed a mass attack on the idea of planned economy. In so far as the idea of pre-determined plan, as distinct from the natural evolution of order in an uncontrolled economic life, is common to both the cults of Socialism and of planned economy, a criticism of planned economy is a criticism of Socialist methods also. But it must be remembered that planned economy is often an attempt to graft Socialist principles on to an individualist system. Or, in other words, the Socialist principle of controlled economy is given an altogether foreign setting ; the failure of planned economy (as it is understood in current discussions) either proven in argument or demonstrated in fact, cannot form a case against Socialism as such. The Socialist will rightly contend that planned economy is neither a form nor a degree of Socialism and that it is unfair to foist upon Socialism the parentage of a bastard system.

* * *

In spite of this obvious reply, the supporters of individualism have gone on merrily with this manner of attack. This attempt to damn Socialism with the arguments, that are relevent only to the demand for planned economy, has been made with stupefying naivete by Professor Hayek in a volume entitled

IMPERIAL BANK OF INDIA.

Secretary and Treasurer.

IMPERIAL BANK OF INDIA,
Calcutta, 6th March, 1935.

Collectivist Economic Planning. Mr. Hayek is, no doubt, aware that "the system under which we live, choked up with attempts at partial planning and restrictionism is almost as far removed from any system of capitalism as it is from any consistent system of planning". In other words, it is no system at all; "it is just interventionist chaos". Nevertheless, the feeling is apparent that arguments against any form of planned economy apply against Socialism also. Obviously, any economic plan is only a part of Socialism; and criticism of a socialist economic plan will not be valid, unless it also takes into account the ideas underlying Socialism and particularly the change in the concept of economic value. While in the case of the advocates of planned economy, the traditional idea of value and the interplay of economic forces are unchanged, in the case of the Socialist they have changed a great deal, though existing socialist literature has not, to our knowledge, any clear examination of the changes indicated. To say more at this stage would be to anticipate the later stages of the argument.

* * *

The volume brought out by Mr. Hayek consists of a few essays by Continental economists, Pierson, Mises, Halm and Barone with two more from the Editor, one inaugurating, and the other summing up, the "debate". Nearly all of them are concerned to point out that Socialists have doped themselves into the feeling that the embarassments and complications of the problem of value can be done away with, as soon as central direction takes the place of private production and competitive marketing. Professor Hayek suggests that Socialists often write as if there would be no problem of value at all to be faced in a Socialist community. And Professor Pierson in his chapter on "The Problem of Value" has, therefore, an easy task in adducing instance after instance, in which the problem of value raises its ugly head. There is no need to answer the point in this particular elementary form, for Socialists can make the obvious report that it is because they value some things more than others that they want to put economic life on a Socialist basis.

* * *

The real point, which the whole volume is devoted to stressing, is that a community, in which production does not depend on the motive of private profit but on direction from a central authority, will be deprived of the guidance which the pricing process of a free competitive market can afford. In other words, monetary calculation will not be an index of values.

* * *

Von Mises, who is gifted with by far the keenest insight puts the position in the clearest manner:

> Where there is no free market, there is no pricing mechanism; without a pricing mechanism, there is no economic calculation.
>
> Monetary calculation, as it emerges from a free market, affords us a guide through the oppressive plenitude of economic potentialities.
>
> It enables us to extend to all goods of a higher order the judgment of value, which is bound up with, and clearly evident in, the case of goods ready for consumption, or at best of production goods of the lowest order. It renders their value capable of computation and thereby gives us the primary basis for all economic operations with goods of a higher order. Without it, all production involving processes stretching well back in time and all the longer roundabout processes of capitalistic production would be gropings in the dark.
>
> Every step that takes us away from private ownership of the means of production and from the use of money also takes us away from rational economics.

* * *

Professor Mises thus works up his indictment of Socialism to its climax when he says that in a Socialist regime, "there is only groping in the dark. Socialism is the abolition of rational economy"!

There is no use under-rating the importance of the issue thus raised. Socialists have indeed, missed the value of the pricing process as a guidance through "the oppressive plenitude of economic potentialities". The problem of deciding between alternative uses of scarce resources has been obscured, as it has been solved only in an automatic manner. And there can be no doubt, too, that when that pricing process has been interfered with by artificial restriction, either there will be no such process, or it will only reflect values in a highly distorted manner. At any rate, the central authority cannot get from prices in a Socialist regime any guidance for production.

* * *

This aspect of the question is dealt with with admirable perspicacity in Professor Hayek's introductory chapter:

> The economic problem arises, therefore, as soon as different purposes compete for the available resources. And the criterion of its presence is that costs have to be taken into account. Cost here, as anywhere, means nothing but the advantages to be derived from the use of given resources in other directions. Whether this is simply the use of part of the possible working day for recreation, or the use of material resources in an alternative line of production, makes little difference. It is clear that decisions of this sort will have to be made in any conceivable kind of economic system, wherever one has to choose between alternative employments of given resources.
>
> How critical the question is becomes clearer if we look at the less elementary wants. It may well be that although the need for one additional doctor is greater than the need for one additional school teacher, yet under conditions, where it costs three times as much to train an additional doctor as it costs to train an additional school teacher, three additional school teachers may appear preferable to one doctor.

* * *

This line of argument is considerably strengthened when it is added that

> . . . . an economic use of the available resources was only possible if this pricing was applied not only to the final product but also to all the intermediate products and factors of production, and that no other process was conceivable which would take in the same way account of all the relevant facts as did the pricing process of the competitive markets. (Von Mises)

* * *

The thesis is, no doubt, invaluable in pushing to the fore certain aspects of economic theory, which even individualist economists, not to speak of socialist, have not clearly apprehended. But before it can be regarded as having caused a breach in the socialist defences, it is necessary to estimate, first of all, its accuracy, and, secondly, its exact significance to the problem of socialist planning. Professor Hayek claims that the pricing process of a free, competitive economy is automatic and rational. It cannot be gainsaid that pricing can be automatic in ideal conditions. But in every known form of individualist economy, individuals have been able to interfere with the working of the pricing process; and it is well that this qualification of the automatic character of the pricing process were borne in mind. As regards its rationale, though, in certain places, the writers of the volume indicate that the term is used in a sense akin to "natural", they still claim for the prices of a competitive economy a high degree of rationality. For it is possible to contend that, as individuals exercise an unfettered choice in regard to the goods and services which they will have, and as in every act of purchase, the individual exercises his judgment in respect of the various alternative uses, to which he can put his means, prices are the result of men's natural choice. It is, nevertheless, quite evident that it is a far cry from the wants of the individual to the prices and values of the markets. It is the most provoking form of causistry to contend that a system, which can allow untitled land and hungry stomachs to persist when the imaginary wants of the rich are being satisfied, is a rational system, the absence of which would be a catastrophe in a socialist regime. The order of values, which will be established in any practical individualist organisation, can never satisfy the criterion of rationality. When Professor Hayek claims that it is a free, automatic and rational pricing system, one can only exclaim, on the analogy of Voltaire's jibe against the Holy Roman Empire, that it is neither free nor automatic nor rational.

* * *

Mr. George Halm in his essay on "The Possibility of Adequate Calculation" attempts to explain away the apparent irrationalities of the present pricing system referred to above.

> The oft-repeated argument about the anarchy of the capitalistic economy and its profit-yielding unproductiveness can hardly be explained except by supposing that the existence of certain kinds of luxury-production at th same time as many consumers with low incomes lack even the necessaries of life is regarded by the critics of capitalism as one of its defects, while the real responsibility for this unsatisfactory state of affairs lies with inequality of incomes and the irrationality of certain forms of expenditure.

* * *

It is to be wondered how inequality of incomes is at all to be separated from individualist economic activity, so long as men are unequal in their power to drive a bargain or to exploit a possibility.

Having pointed out the inaccuracy in describing the present pricing process as rational and automatic, we may proceed to determine its significance to the direction of productive activity. The writers of this volume apparently suggest that value would be incomprehensible unless it emerges as the resultant of the forces of competition. The central problem of economic life, namely, costs, that is, costs in the sense of the satisfaction to be derived from the utilisation of resources to alternative ends, has, in this view to be solved by the more or less objective factor of prices. Here, in our view, we stumble on the fundamental question of whether value is subjective

or objective. In equilibrium economics, the general assumption is that the utility of any object or service is subjective, as it rests with the individual whether or not he will regard the thing or service as useful to himself. But value, in the sense of its relation to other objects of utility or to demand is objective, in as much as it will be affected by the interplay of competitive forces which *ex hypothesi* no one can control. The level of prices which reflects relative values at any given time, gains an objectivity which the utility of any one thing or service may be said to lack. The entire capitalist order works according to the dictates of this level of prices as it is and as it can be foreseen over a period. Men fatten or are starved according as the over-supply to one and denial to another is profitable. The production of a Rolls Royce and throwing men out of employment are profitable what time the reclamation of more land is a dead loss. It is, impossible in the nature of things that the pricing process, which is connected with human volition only in the remotest way, should answer the tests of rational valuation.

* * *

Individualist economists suggest that the guidance of this pricing process would be lost in any system which is not based on free production and marketing and that, therefore, any system of controlled economy must inevitably flounder. It is not our purpose to underrate the practical tasks with which the central authority in a socialist economic organisation will be faced. All we wish to point out at this stage is that the last thing that a central authority would want is a pricing system which emerges like some strange brew from the fermentation of private profit. To such authority values and prices are not objective entities to which it has to react. On the other hand, it will be for such an authority to determine such values and prices. Value in a socialist community, and to the directing authority in particular, is subjective. It is different with utility which is objective, owing to the fact of the qualities of any good and the need of any individual for such qualities. It will, however, be for Man to say what value he will give to a particular utility. To say that a Socialist community will lack the guidance of an objective price system is to mistake its main aspiration for one of its weak points.

* * *

Theoretically, therefore, this talk of loss of rationality and groping in the talk can cut no ice. In practice, however, the dethronement of the Cost Accountant will, no doubt, result in numberless problems. But nothing can relieve the central authority of the responsibility of fixing a gradation of values. Whether the resources of the community available at a given time shall be devoted to the satisfaction of this want or that or the other will have to be decided from day to day. So long as each want may be regarded as a bidder for the available capital, the decision of this question is as easy as conducting a public auction. But once it is recognised that value is subjective and costs mean only satisfaction derivable from putting the same resources to alternative ends the values of which are also subjective, the problem of a central directing authority is a problem, not of value but of valuation.

* * *

It may be said that subjective valuation of this kind by a small body constituting the central directing authority must necessarily involve arbitrary decisions, which may not in all cases be in accord with the valuation of every individual member of the Socialist community. The critics of Socialism, no doubt, realise that, when freedom of choice is denied to the consumer, the difficulties, which they indicate, may disappear. But the subordination of individual desires to the dictates of a remote central authority is, according to them, a feature of Socialism which must stand self-condemned in the eyes of every intelligent man.

* * *

There is no doubt that the direction of productive activity by a central authority must involve a restriction of the freedom of consumer's choice as we have so far known it. But it is necessary to enquire into the nature and extent of such restriction before it can be thought to signify an intolerable economic regimentation. In what sense is the freedom of consumer's choice present in an individualist economic organisation? Surely not in the sense that any man is free to have a Rolls-Royce or a breakfast as he chooses! It is present only to the extent that a man can devote his purchasing power to anything he chooses or distribute it among a number of things according to his taste. It is present also in the sense that there is in the automatic pricing process of the free economy a rough co-ordination of individual judgment of value and the judgments of men as they participate in economic transactions. Will a similar co-ordination be effected in a socialist community in a manner that individual tastes and desires will be adequately reflected in the policies of the central authority? This, we suggest, is a simple problem in political science. It might appear crude to suggest that production policies should be determined by show of hands. It will certainly not satisfy the love of economic finesse which orthodox economists have developed in the course of their analytical study of equilibrium economics. But it is difficult to see how else individual desires can determine policy in matters of common concern. Even more difficult it is to understand why people believe that a general consensus of opinion, which is obtained, day in and day out, on political questions, would prove to be utterly elusive in matters economic.

If it's Life Assurance

Then ask the National Mutual. This worldwide Association has the very be: "life" terms. : : : : : : :

Since 1869, when the National Mutual was first established, they have paid out over Rs. 455,925,900/- in claims alone. : : : : : :

At the present moment over Rs. 1,283,393,500/- are assured under current policies. This is a mark of public confidence that cannot be passed over when considering that all important question of a life policy. : : : :

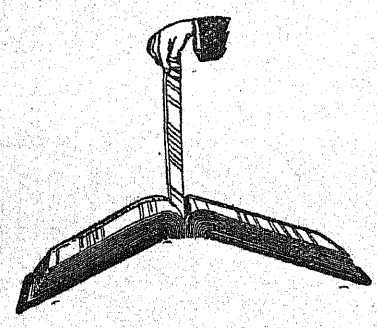
GRIP-FAST THONG LEDGER

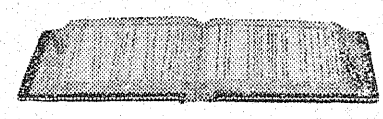
FOR

BANKS AND INSURANCE COMPANIES AND OFFICES



This mechanism GRIPS like a VICE. But the sheets can be easily removed.

The "A" Model Thong Binder is suitable not only for Ledgers, but for many other records: Stock Books, Securities, Share Registers, Insurance Street Books, Policy Registers, etc., Minute Books —in fact for any book where it is a convenience to remove dead matter and insert fresh sheets.



SEE HOW FLAT IT OPENS.

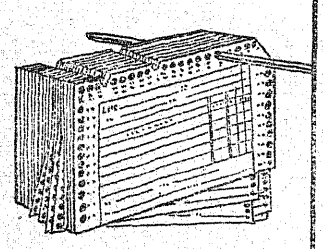
No Book made, Loose-leaf or Sewn will open flatter than this.

Designed and constructed to withstand Indian climate

FOR ACTIVE BUSINESS RECORDS

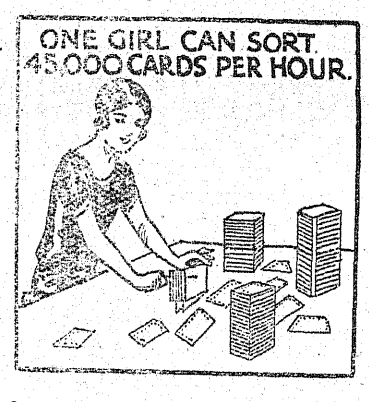
COPE-CHAT VISUALIZERS

"PARAMOUNT" SORTING AND COSTING SYSTEM



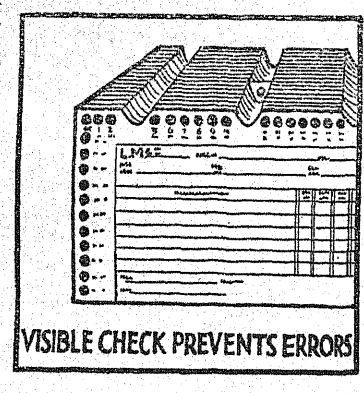
1. SIMPLICITY

Just push the needle through the right hole and the cards are separated immediately. No elaborate and costly machinery.



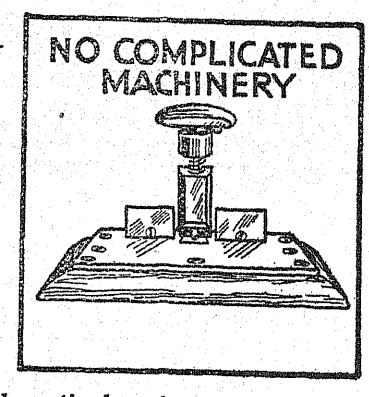
2. SPEED

45,000 cards can be sorted in an hour. Operatives soon become skilled in the work. Twice as fast as complicated machine-sorting systems.



3. ACCURACY

The visible check absolutely prevents the possibility of error. Just look through the groove and if it is not clear there is a mis-sort which is immediately rectified.



4. LOW COST

All the "machinery" you need is a card punch—in its simplest form an ordinary ticket nipper. The cards cost little more than ordinary index cards.

Write for full particulars to:

THE OFFICE EQUIPMENT CO. OF INDIA

'Phone: Cal. 3746. **POST BOX No. 160 CALCUTTA** 'Grams: BROWNMAN.

Simple as this proposition is, one or two points may be mentioned which would make the problem look less formidable than it does now. A consensus of opinion on human wants seems difficult to obtain when one looks at the complexity of modern economic life. But it is necessary to analyse "wants," as it is understood in economics, into its constitutents. The term "wants," in fact, covers not only the needs of life over which one's choice is highly restricted, but also wants, which are either suggested by one's fancies or dictated by prevalent fashions. Differences of opinion and tastes and fancies have far less scope in regard to needs than in regard to wants.

* * *

Socialism is in essence and origin only a demand that the needs of the masses shall not be sacrificed to the wants of the classes. When production policies are discussed in a Socialist commonwealth, we may be sure that there will be a preponderant majority demanding that provision for unquestionable needs should be put far above the satisfaction of questionable wants. There can be no doubt that for some considerable time the central authority of a Socialist commonwealth will have its hands full with schemes of production of primary necessaries of life. And it can be no reflection on Socialism that in such a stage, the conventional requirements of the erstwhile upper classes will go unheeded. In the latter stages, the highly educative forces which socialism will liberate will render the task of ensuring consensus of opinion on the higher needs far easier than we can now imagine.

* * *

The satisfaction of human wants in the order in which they are felt by the individual himself is of the essence of rationality in economic life. When wants rise to the plane of aspiration and ideal, they burst the bounds of economics, as it is ordinarily understood. But the higher aspirations and ideals cannot, from the standpoint of life in society, be altogether divorced from needs as distinct from wants. Individualists, who insist that a higher life should take little account of the facts of physical existence, only delimit to a purely material field the scope of economics, which is the science of the relation of means to ends. Professor Mises observes in the course of his chapter on Economic Calculation:

> Anyone with a genine sense of moral values experiences no hardship in deciding between honour and livelihood. He knows his plain duty. If a man cannot make honour his bread, yet can be renounce his bread for honour's sake. Only they who prefer to be relieved of the agony of this decision, because they cannot bring themselves to renounce material comfort for the sake of spiritual advantage, see in the choice a profanation of true values.

* * *

There is a touch of Sadism in the insistence that pain is a necessary attribute of a good life. Professor Mises and those who are of his way of thinking cannot apparently contemplate goodness without agony. Obviously, one need not be a martyr or a hero to be good; and the fact that the present economic organisation confronts the individual only too frequently with a choice between honour and bread is, perhaps, its worst condemnation. The strength of any society is its sense of values and its ability to achieve them. When Professor Mises says that "the scale of ultimate ends is a matter for conation, and not for cognition," he indulges in a subtle dogmatism about the superiority of capitalist rationality, which Muckle rightly denounced as "the most frightful of all barbarisms."

Applications should be made on the Prescribed Printed Form and must be accompanied by the full purchase price of the Shares applied for.

Applications will be received at any Local Head Office or branch of the Imperial Bank of India, at a Government Treasury or at any Head Post Office in India.

Copies of the Prospectus (with application form attached) can be had at any of these offices.

ALEMBIC CHEMICAL WORKS

The Alembic Chemical Works Company, which has opened an office in Calcutta this week, is the Bombay counterpart of the Bengal Chemical and Pharmaceutical Works. Both owe their origin to sentiment rather than business, to nationalism rather than profit-earning. And both have proved that sentiment can be an enduring foundation. They have greatly stemmed the inflow of foreign drugs ; and their manufactures have the hallmark of approved excellence and standard quality. India, especially Bengal, has now a good crop of 'chemical' companies fashioned to manufacture drugs, perfumes, toilet requisites, etc. The Alembic, which was one of the earliest enterprises patronised by H. H. the Gaekwar of Baroda, may well claim to be the parent of all.

INDIAN INVESTOR'S YEAR BOOK

Eaves dropper writes:—

The *Indian Investor's Year Book,* issued this week, maintains its high standard ; and it is a measure of the alertness and enterprise of the publishers, Messrs. Place Siddons and Gough, that a volume, which incorporates figures of balance-sheets for half-year ended November 30, 1934, has been issued early in March. I have always found the Year-Book an indispensable book of reference ; but with the expansion of the scope of our *Investor's Supplement,* it has, verily, become my bible. To every banker, stock exchange broker and operator, and investor, it is of continuous and abiding value. The Investment Intelligence Section, maintained in the offices of Place, Siddons and Gough, must be thorough indeed ; and it is this alert and well-informed service which has given them the premier place in the broking world and their Year-Book the premier place amongst publications of this kind.

SILVER SALES

The Federation of Indian Chambers of Commerce has entered a timely protest against the policy of silver sales pursued by the Government of India. Though the record of the Government of India in regard to the financial and currency questions does not encourage the belief that they would respond to informed criticism, it is still necessary to appreciate the issues connected with the question of the silver sales.

* * *

It will be remembered that when the Hilton-Young Commission submitted their report in the middle of 1926, they recommended that the Government of India should dispose of, at every favourable opportunity, their excess holdings of silver. The Government of India have claimed that their sales have been in pursuance of a policy laid down by an expert committee like the one presided over by Sir Edward Hilton-Young. But the Commission did not recommend the sale of silver merely on the ground that we had too much of the metal and that it would be worthwhile to dispose of the excess holdings. Their view was that, as India was to adopt a gold-bullion standard, it would be necessary to acquire large holdings of gold. The evidence tendered before the Commission by the representatives of Great Britain and America left no room for doubt that India would not obtain any help from those countries in this regard. Sales of silver were, therefore, recommended as one of the measures by which India could procure gold from a world generally unwilling to part with it. Such being the recommendations of the Commission, the Government cannot invoke Sir Edward Hilton-Young and his colleagues to their support in the policy of the silver sales, unless they can also claim that they had utilised the proceeds of such sales for the purpose of augmenting our gold reserves. No one in India can be in any doubt that the Government are innocent of any such purpose, as they have all along been privy to the deprivation of India of her hoards of gold. By persisting in the policy of free exports of the yellow metal, the Government have weakened not only the national economy but also the position of the Reserve Bank.

* * *

It is obvious, therefore, that the Government cannot plead the recommendations of the Hilton-Young Commission in defence of their persistence of the sales of silver. Even if they have implicitly followed the recommendations, their action would not have been defensible. For it is now a decade since the Hilton-Young Commission enquired into this question and made their own conclusions. During the last five years, the world has been a prey to an unprecedented economic depression and the position of the metals has changed a great deal. The value of gold in relation to commodities has increased by nearly sixty per cent. The position of silver, too, has been altered not only in relation to gold during the greater part of the depression, but also intrinsically, inasmuch as during the last half-year the United States of America has been following a policy designed to increase the price and status of silver. The future of silver, as it can be seen to-day, is nothing like the future which the Hiton-Young Commission could have envisaged for themselves. If the United States should succeed in its policy, a much higher level of prices would obtain. It is in relation to such possibilities that the Government of India would have to revise their attitude to silver.

* * *

Apart from these considerations, there is an incidental effect of the sales of silver which may be said to be conclusive against any further persistence therein. The circumstance is that sales of silver by the Government of India have been followed by a contraction of currency. The procedure adopted is that when rupees are melted and sold as bullion the difference between the face value and the bullion value of the currency is made up in the Reserve by the deposit of *ad hoc* securities to the required amount. But latterly, every opportunity for the cancellation of such *ad hoc* securities has been readily availed of by the Government ; with the result that the circulation has been reduced to the extent of the difference between the amount of rupees melted and the amount actually realised on the sale of such silver.

Clive Street Gossip

A week-end in Jamshedpur is a good though strenuous, a satisfying but hectic, holiday. Last mid-week, I had a trunk call from Mr. Keenan who pressed me to come over for the Founder's Day celebration; and I accepted the invitation with alacrity though not without some misgiving whether, after a week of recurring functions and late nights in Calcutta my head was equal to the double strain of an evening party by the Keenans and a supper party by Mr. J. J. Gandhi cheerily described as Joe. I am right glad I spent the two days in the Steel City, as the experience was, in its own way, novel and exhilarating. Novel even to one who had gone thither umpteen times. Novel because it was the Founder's Day celebrations which I have not so far attended. And exhilarating because the solemnity of the function was impressive and its gaiety marked by entire abandon.

The celebration comprises two features—the festivals of the morning, and convivialities of the night. In the one as in the other, Keenan is the dominant figures—the personality that binds the East and the West, the officers and the staff, the black-coated labour and the common labour, the four-figure-salaried few and the two-figure-salaried many, the aristocracy and the mobocracy. He interprets the mind of the workers to the 'bosses' in Bombay—their aspirations and hopes, their problems and difficulties. He interprets the authority of the Tatas to the workers in Jamshedpur—the Tatas' concern for the welfare of labour, their solicitude for its clean and sunny lives and their sympathy and friendliness. If a General Manager of a Steel plant knows only the steel machinery and not the human mechanism, he will be a howling failure. If he knows both, he must prove the biggest asset. Keenan is an asset of supreme value as he is as good a maker of iron and steel as he is a good judge of men. Keenan knows his men, appreciates their lives and their problems, understands their innermost thoughts, and sympathises with their longings. And the men know him and trust him and will do whatever he bid them do. The man at the top, and the men in varied ranks below are bound together by the silken cord of mutual understanding, affection and regard.

The spectacle of thousands of men paying reverent homage to the Founder's statue was solemn. The sight of the same thousands rendering loving honour to the General Manager's living person was at once touching and edifying. Here was the man, I thought to myself, who could tackle, for President Roosevelt, even the labour tangle of the United States. The American President has succeeded in finding the right men for dealing with politics and codes, institutions and systems. He has, so far, singularly failed in spotting the man who can speak to the heart of the workmen. And the labour situation in America continues to be menacing and intractable. It is good that Mr. Roosevelt has not cast his eyes India-wards, as Jamshedpur can ill afford to spare its General Manager. In the words of Abdul Gani (more of him in later paras), "this industry and country will advance to a greater extent if the present General Manager, Mr. Keenan, also builds his own house and settles here permanently so that this country and other industries in India can be best served by him and his ideals."

I find myself in the meshes of a panegyric on the General Manager whilst I set out to pronounce one on the Founder. I suppose it is not my fault, for, you cannot speak of Jamshedpur of to-day without continually harping on Keenan and Gandhi—they are the driving force inside the works, and the all-pervasive influence outside in the social life. Yet, the very fact that these men are what they are is itself the best tribute to the plan and ideal of Mr. J. N. Tata. Here is Jack more intensely proud of whatever is India and more fervently concerned about whatever befalls Indians than a national of India; and here is Joe who is as efficient, as keen a hustler, and as ahead of to-day as any Yankee. Thus have the East and the West met, in fruitful unison, in the City consecrated to Mr. Tata whose dream was the installing of a most modern industry in what was hitherto an industrially primitive country. And as one watched the procession that marched past the Founder's statue on the Sunday morning, the thought that came uppermost was that here was the entire world in a nutshell. Is there not a moral too deep for words in the congregation of men drawn not only from the far-flung provinces of India but from far-off corners of the globe on a spot where reigned, a bare generation ago, the silence and emptiness of an untrodden jungle?

Imagine yourself standing, in the morning of the Founder's Day, beside the newly erected column of oriental device at the entrance to the Works as you proceed from the offices ; and keep a watch on the endless array of men who, in orderly and reverent decorum, file past the statue of Mr. Tata. Look on the German Doctor who bows and drops a gorgeous bouquet—on the many Americans who also bow and drop flowers—on the Britishers who, rather stiff in their salute, are no less moved as you judge their expression and offer their tribute with no less sincerity—on the velvet-waist-coated Pathans who salute mliitary-fashion but also intensely human-fashion—on the crowd of Indians of all creeds and of all communities

in multi-coloured attire, who vie with each other in paying their respects with folded hands and floral tokens. Watch the hill of flowers growing into a mountain, and the array of workers still coming from all directions and yet perfectly orderly as though their very work teaches them discipline. Take a look round ; and mark the expression of profound gratitude and sunny content in the sea of faces spreading left of you and right of you, in front of you and behind you. The Hindus believe that seeing a crowd of humans is as good as visiting a temple. One feels like it as one attends the morning Festival on the Founder's Day, and realises that he is, verily, a deity to the one lakh of people that live and have their being in the Steel Town and to whose lives his dream has meant the fact of light and warmth, bounteous bread and happy home.

Keenan was vastly moved and exclaimed:

> "As I see this almost endless troop of men marching up from the far beyond, it strikes me that India should have no fear for her future as far as iron and steel is concerned. They resemble a conquering army. And they are a conquering army. They have been able to disembowel the Chota Nagpur hills and turn the iron ore, which had lain hidden for centuries, into bridges, railways and plough-shares. Who knows, India, which is now on the world steel map, may rise, in time, to a commanding position."

With dusk commenced the convivialities designed both for the select and the populace. The fireworks on the maidan were watched by a crowd of over half a lakh. Labourers and clerks and officers jostled against each other, chattered incessantly, and broke out into constant cheers. I should think that fireworks constitute the cheapest and most popular form of amusement. Everyone of us feels like children; pyrotechnics touch a primitive and universal chord in all of us. It levels age and universalises mirth. There was a display of the bust of Mr. Tata, twinkling in myriad lights and sparkling with myriad effects. Keenan and myself pushed through the crowd right up to the spot where the display was conducted. The spectacle of the illumined Founder and the sight of the General Manager standing at the foot of it, were the signal for a vociferous shout from thousands of throats of Jamshedji-Tata-ki-Jai. The shout was taken up again and again, it echoed and re-echoed. As we returned to our car, afugitive cheer was raised for Homi-ki-jai. The hisses that followed brought home the heartening thought that the Homi spirit was dead, coffined and buried.

This brings me to the evening function at Keenan's bungalow. It was a function which, in the words of Abdul Gani, was attended "by one and all, both high and low, Indian and non-Indian, representatives of both labour and capital to be enjoyed by all." Of this cosmopolitan crowd, I have made special mention of Abdul Gani; for, he typifies the nature and measure of achievement in human terms in the Steel City. He was, before he joined the Tatas, a labourer getting 2 annas 3 pies per diem in a railway workshop. Over twenty years ago, he was taken by the Tatas on a salary of Re. 1-4 per day. His present salary is Rs. 250. He gets a production bonus. He gets an annual bonus. He has his periodical leave. He has built a big house in Samastipore, his native place. His three sons are educated in the free school provided by the Steel Company. He has hopes that they will be taken in the apprentice class and start on a higher rung in the ladder than he himself did. What has happened to Abdul Gani is what has happened and is happening to hundreds of others in Jamshedpur. I had a long talk with the many Abdul Ganis who proudly partook of the eats and drinks plentifully provided by the hospitable host. Abdul Gani has himself sent to me a translation of our conversation through the Metal Workers Union of which he is the Vice-President. It is amazing how he has remembered our Urdu talk in such perfect detail and has had it rendered into English so accurately. I make no apology for extracting the following lengthy passage from Abdul Gani's letter, as it is something which enables us to understand Jamshedpur and what it has done for Indian labour:

> "Mr. Keenan, in introducing me to Mr. Rangaswami, Managing Editor, *Indian Finance*, told him that I was one of the strike leaders of olden times. I stated that the treatment of the then Management was not fair to the labour and hence there were troubles and we had to join such disputes for securing justice. I had to explain further that in those days, the industry being new, both the officers of the management and workers were new. The officers had no practical knowledge of dealing with the labour and many mistakes were made and injustices meted out. If any labour leader tried to bring to the notice of the management the position of labour, consideration was not always given to their endeavour and misunderstandings arose.
>
> I was again asked as to the present position for which I replied that the treatment being received by labour at present at the hands of the present officers is very cordial and good and I instanced that one of the benefits secured by the present General Manager to the labour is a recent granting of bonus from the profits earned by the Company which created a very healthy atmosphere among the workers and now everybody feels that he has got some share in the profits of the Company and so with greater heart exerts to the prosperity and record production and the present labour organisation recognised and the representations are favourably considered.
>
> To a question as to why I am peaceful in these days, I replied that I have grown up in age *i.e.*, above 40 years and now I understand the sense of responsibility considering the fact that the losses and gains of

the Company as my own personal concerns and hence I take any action with greater responsibility which appears to you as peaceful.

I was questioned by the Managing Editor what was my pay then and what it is at present. I replied that I was getting Rs. 1-8 and now I am getting Rs. 250 and my service is about 24 years. I was questioned whether the production bonus is being paid to me and I said some get and some do not get but one and all get the General production bonus which comes to a maximum of Rs. 11 per month.

I was questioned why we are following any and every labour leader to which I replied that this country is backward industrially and politically and labour is far behind in education and hence do not possess the capability of knowing right from wrong I have also complained that even the press has not helped us to ventilate our views and give us correct lead but they always twist matters acording to their own convenience. However, now we have established proper organisation, the Metal Workers' Union under the leadership of Mr. V. V. Giri, who is now an M.L.A., recognised by the Board of Directors, to educate the workers in a right way. We hope we will succeed in attaining our object if we get this continued co-operation from the management.

On being questioned as to why I did not build my own house here yet, I told him that I will certainly build one very early but I sincerely felt that this industry and country will advance to a greater extent if the present General Manager Mr. Keenan also builds his own house and settled here permanently so that this industry and other industries in India can be best served by him and his ideals."

Abdul Gani, in the matter of worldly prospects, is interesting enough as a sample of what Jamshedpur is doing to its employees. But he is far more intriguing as a sample of what Jamshedpur does to the mental outlook and calibre of its population. At the Keenans' 'At Home', Gani, securing permission to speak for five minutes, held forth for twenty; and a finer performance in Urdu I had not listened to He has had but little education; but, from the point of view of the art and science of oratory, Mark Anthony could be proud of the speech which Gani delivered. There was humour, pleasant chaffing, gripping episode, pause, emphasis, modulation of voice, and, let me add, due greasing of the officials in whose hands lie his promotion prospects. If Jamshedpur could make a finished orator of an Abdul Gani, its cultural influences must be deemed remarkable indeed. And as Gani concluded his peroration with a sincere eulogy of Mr. Keenan, the words of the Psalm came to my mind: "I will declare thy name unto my brethren; in the midst of the congregation will I praise thee."

The after-dinner carnival in Joe's bungalow was a dream of light and colour, a revel of music, a carouse of choice and delicious wines, a riot of rythm and dance. But Joe was a disappointed man ; the end was too tame for him. The ambulances, which, he announced, were to be ready by 6 a.m., were not put to any use. I myself sneaked out at the bewitching hour of midnight lest I might need the ambulance. I suppose, many others, too did it. But everyone enjoyed himself or herself thoroughly. It was absolutely perfect fun and frolic, a frenzy merriment and jollity. Both the host and the guests entered into the spirit (and spirits) of the supper party with all the greater vim and zest as Joe is shortly going on a six months' holiday.

As I go to press, I have received a copy of the 1934 account of the Industrial Investment Trust, reference to which I have made on earlier occasions. Of the nine directors on its board, eight are belted knights. Quite impressive! Of the Rs. 1 crore issued, Rs. 41¼ lakhs has been paid up-to-date, while the investments came to Rs. 54½ lakhs—quite a considerable sum to make a comprehensive selection of securities. The profit in the year was Rs. 1.95 lakhs; and after sundry adjustmentes and after providing Rs. 70,000 for reserve, Rs. 77,957 is the balance which is carried forward. Quite an impressive record for the first year! The investments are well-diversified; and the report gives exhaustive particulars. The following table shows classification according to rupee sterling securities.

	per cent.
Rupee Securities	79.52
Sterling Securities	20.48

The following is a classification according to the denomination of the securities:

	per cent.
Government Securities, Debentures and Guaranteed Stocks and shares ...	37.13
Preference Shares and Stock ...	14.23
Ordinary Shares and Stock	48.64

This appears quite a well-poised protfolio. The 1935 accounts should show the full earnings of the securities; and the dividend distribution for the year must be quite satisfactory. My best congratulations to Sir Kikabhai Premchand on his pioneer company's brave showing!

OLYMPUS

(FROM OUR CORRESPONDENT)

New Delhi, March 5.

I am writing this after hearing the first day of the "general discussion" on the Budget. More speakers will, doubtless, participate in the debate tomorrow. But all that could be said on the merits, has been said already. And I am confirmed in my opinion that the present assembly is poorer than its predecessor in its equipment of financial and economic knowledge and judgment in these matters. This was hardly any point which Sir James Grigg should feel called upon to answer specifically ; and the Finance Member took few notes during the speeches of the opposition members.

* * *

The Finance Member is, in this matter, quite unlike his predecessors. They all took copious notes and answered the debate at length. Sir James will not do so. He thinks that his speech contains the answer to all that has been said by his critics ; and he may leave it at that.

* * *

The only matter which could have drawn him out related to the ways and means programme, and these no one touched, with the result that Sir James will be called upon only to repeat what he has already said in anticipation of the criticism. Moveover the Finance Member is a man of few words.

* * *

I am told that the speech is entirely the Finance Member's own draft. He had worked with many Chancellors of Exchequer in England. Apparently, Lord Snowdon's style appealed to him most. His style is certainly that of the first Labour Chancellor. His manners, too, are those of a socialist in action. He made no fuss. His predecessors used to come in morning coat and arrive just a minute before the due hour and then enter amidst cheers. Sir James Grigg wore his ordinary-day dress and walked in early enough to avoid these cheers.

* * *

But before he began, he had to face an embarrassing situation when Dr. Ziauddin Ahmed protested against the distribution of the speech to the Press. Sir James did not know what was the point of the protest. His Department had done no more than what was customary. The Press Gallery is invisible and no Member can make reference to it and the speech was being handed over, as before, just at 5 p.m. when it was handed over to the press all over India. I hope this unwanted protest would not lead to any change is the time-established practice.

* * *

The Finance Member went through the ordeal well, and though his voice was sustained throughout, it was apparent that he is not made for long harangues. And the congratulations that poured over from all quarters after the speech was delivered gave Sir James a feeling of delight that he had done his job creditably.

* * *

I do not think Sir James has had any worry with regard to his budget statement, except the feverish excitement which speculators had created in Bombay. He knows from the experience of his predecessors that Bombay speculators adopt awkward tactics ; and he would not be averse to hitting them, but no Finance Member can fight the circumstances of India which require decisions being taken at least a week in advance to permit the speech reaching all corners of India, by mail, for press purposes.

* * *

Perhaps, Sir James will think of some method to stop gambling in the markets on the prospects of an impending budget. It is a very difficult matter, but the position becomes intolerable when parties concerned adopt objectionable tactics to do the Government in the eye and cheat the unwary.

* * *

So far as the financial tale told by him is concerned, my impression is that the battle will rage round the question of revenue tariffs. The lists have already been set. The Executive Committee of the Federation of Indian Chambers of Commerce, which met here yesterday, he voiced its protest against this move and the European Group, speaking for European commerce, has insisted on such a revision. Sir James Grigg is an enthusiast for this end. Which means that we should be ready for some real warfare in the future on this question of fundamental importance.

* * *

Sir James Grigg is, perhaps, suffering from one difficulty. Of the Finance Members of the past fifteen years he is helped least by expert advice. I do not think the Finance Department has good enough officials to help him ; some of the men about him are mediseres and can hardly rise to a big occasion. Unless the Finance Member looks round and strengthens his staff he may find his task more difficult than he realizes to-day. Undoubtedly, he is himself well equipped for making sound and quick decisions ; but he needs the help of those who can elaborate the various issues, and that help is not there in a measure that his predecessors had. The mere appointment of a permanent Financial Secretary will not solve the problem.

* * *

So far as the Assembly fortunes of the budget are concerned, I doubt if the Finance Bill will be thrown out. The reason is that the Opposition realizes that such a course would only provoke Government to restore the original bill and get over any changes which the Assembly may make. Thus, as things are now, there is no prospect of the salt duty being affected and the income tax level may be raised to Rs. 2,000, while the surcharge on income tax will be reduced ; but that on super-tax may be postponed. And I don't think the Finance Member will go against such a vote of the House, if it is carried.

* * *

An interesting function took place last night when the European Group, as is customary with them, gave a farewell dinner to the two outgoing Members of the Viceroys Executive Council. The fact that they are Indians did not make a difference for the Congress Party, who keep away from functions in honour of officials but meet them gladly on non-official functions. One missed Sir Fazli Hussain, whose speech would have been really befitting the occasion. But Sir Joseph Bhore more than made up for it. It needed some courage to tell that audience, and especially when the hosts were Europeans, that the forebears of Europeans came to India "to shake the pagoda tree," and, further, that there were still in the service, men who thought they were agents of the British Government. Though he significantly added that the majority of Europeans did not belong to these classes. it speaks a lot for the courage of the Commerce Member to have drawn that aspect of the picture along with the other more pleasing to the European ear.

TANNERS TANNED!

(FROM OUR CORRESPONDENT)

Madras, March 5.

I have often hinted in these columns that the interests of Madras are weighing less and less in the counsels of the Central Government. This was the complaint of Bengal in former days, and now, she is the pet of the powers that be; and it is the lot of Madras to lose ground more and more. Sir James Grigg's budget, which is regarded as generally featureless, and, on the whole, satisfactory has, at the same time, a particularly unsatisfactory feature from the standpoint of this Province. The Central Government have, indeed, gone far out of their way to hit one of our staple industries, namely, tanning. Last year it was a case of reducing the export duty on hides; and now the duty on raw skins has also been done away with.

We had, indeed, not much reason to expect that the Central Government would keep a soft corner for Madras. They have shown a callous indifference to the sufferings of the agricultural classes and particularly the growers of rice. Even as against a colony of a rival power like France, the Government of India have refused to take any action to prevent that flow of the imports of rice from that colony. Various reasons have been adduced for this inaction, reasons which have been exposed from time to time in these columns. But, even if these reasons are plausible there has been no gesture from the Central Government of goodwill to the growers of rice in the South. It is to be wondered whether the recent motion carried by the Council of State at the instance of Mr. G. Narayanaswami Chetti will ensure some belated act of justice to our people. But the reply of Mr. Stewart, the Commerce Secretary, leaves no room for hope; for he has dismissed the question as a purely local one despite the fact that the imposition of an import duty, which is clearly called for in this case, is a matter for the central, and not provincial, government.

To return to the question of the export duty on skins, there can be no doubt that the removal of the export duty will come as a great hardship to the tanning industry. From the moment of his appointment as Finance Member to the Government of India, Sir James Grigg has been advertising his devotion to the cult of free trade; and rumour has it that he even said on one occasion that he counts himself as one of the two free traders still left in Britain, and, perhaps, the whole world, the other being Lord Snowden. While Sir James is certainly welcome to hold his own opinion on fiscal policy, he is certainly not entitled to apply them to the fiscal system in India in such haste. There is no manner of popular sanction for the reversal of our fiscal policy; and if this is a sample of the changes that Sir James would effect during his regime, our legislators cannot be too vigilant in watching this enthusiast for free trade.

The reasons, which Sir James has adduced in support of the removal of the export duty on raw skins, have been examined by Mr. Jamal Mahomed, who is the most prominent representative of the hides and skins trade, and who is also the President of the Federation of the Indian Chambers of Commerce. In a statement to the press Mr. Jamal Mahomed has refuted Sir James' contention that the export duty on raw skins has interfered with the exports of this commodity and that, as the expansion of our foreign trade is now of the greatest importance, it is advisable to abolish this duty:

> "The Finance Member gives some figures in support of his proposal. To say the least, they are misleading. He says the export of raw skins for eight months ending with November fell from 13,133 tons in 1933 to 8,938 tons in 1934 and seems to suggest that this is due to the export duty. But the figure for the corresponding eight months in 1932 was only 7,879 tons. That is to say, the export increased from 7,879 tons in 1932 to 13,133 tons in 1933. This increase took place while the duty existed and in spite of the duty. This will show that it is useless to blame the duty for the fluctuations in the trade which are mainly due to world causes, demand and supply at a particular time; and such causes cannot be remedied by the sacrifice of this poor duty. Moreover, it is funny to accuse this small 5 per cent. duty of seriously affecting the trade while the latter is putting up with a fall of more than 50 per cent. in prices.

The points which have been advanced by Mr. Jamal Mohamed are, indeed, irrefutable. There is, within a small range, but the loosest connection between the volume of exports and changes in duties. And if Sir James prides himself on his contribution to free trade and the recovery of international trade, all that we can say is he lacks a sense of proportion. It is up to the Madras Members of the Legislative Assembly to get a large majority against this proposal in the Budget. This should not be difficult as even the European group cannot be solidly in favour of the abolition of the export duty. There are European proprietors of tanneries in India; and I find that only the other day Mr. Gavin Jones protested against the treatment that is being afforded to tanners.

The success of the Pykara and Mettur projects has induced the Travancore Durbar to exploit the Hydro-electric possibilities of the State. It is only recently that a committee enquiring into the state of cooperation had also occasion to observe that Travancore was unduly dependent on agriculture for her prosperity and that, there could be no improvement in the standard of living unless the Government took steps to develop industry, for which the potentialities in the State were very considerable. The Government have, indeed been giving this matter their best attention for a long time; and one of the notable results is the inauguration of a Hydro-electric project at Pallivasal. A preliminary survey of the Hydro-electric possibilities in the State were first carried out in 1919 by Mr. J. F. Jacob the then Chief Engineer of the Public Works Department. On the basis of his recommendations an estimate of Rs. 70.8 lakhs was sanctioned for the present project in February, 1933. The execution of the work was entrusted in the following May to a specially created Electricity Department of the State. It might be of interest to give here the important facts about the present project. The total head available by the State where the power house is to be located is 1,990 feet. It is proposed that water will be diverted from the existing Government weir at Munnar at a level of 4750 feet above sea level and taken through a tunnel cut through the mountains approximately 10,130 feet in length and led to a forebay where the level is 4,758 feet. From this forebay water will be led down through two penstock pipes each 7,447 feet in length to the power house where the level is 2,760 feet. Each penstock is designed for the discharge of 36 cusecs at 109 feet loss of head so that the net head available at the power house will be approximately, 1,880 feet. The minimum dry weather flow of the river is about 64 cusecs. The total power that can be generated from this quantity of water without the aid of any storage is 12,000 b.h.p. continuous. When the demand warrants it, the dry weather flow will be increased by the provision of suitable storage in the Lockhart and Kundale valleys and the capacity of the station would ultimately increase to 30,000 k.w. or roughly 40,000 b.h.p. It must be mentioned, however, that the construction of these storages is not included in the present programme of work. The two machines in the power house, for which the foundation stone has been laid by His Highness, will generate at 11,000 volts. The 66,000 volt line from Pallivasal will go across the hills to Kothamangalam 31 miles from Pallivasal and will branch off

LARGEST PRESSED STEEL TANK IN THE WORLD

3½ MILLION GALLON RESERVOIR IN THE HIMALAYAS FOR MURREE

On a site so inaccessible that aerial-ropeway and bullocks provided the only possible forms of transport —where snow for a quarter of the year prevented all possible progress : under such conditions this immense steel tank was completed in under six months, a fitting commentary on the efficiency and resources of the Braithwaite organisation.

BRAITHWAITE & CO.
(INDIA), LTD.

South 1112

Clive Works, Calcutta. **Mulund Works, Bombay.**

THE GATEWAY OF INDIA

(FROM OUR CORRESPONDENT)

Bombay, Thursday, March 7.

I should begin with a topic of all-India import this week, namely the Central Budget. It is almost a truism that a Budget cannot please everybody. There are those who anticipated a reduction in the duty on British Textiles and others who were waiting for an excise levy on cement. There were also the vast majority of service-holders whose hard-earnt thousand or twelve hundred rupees have come under the priming knife of the income-tax authorities. In all these respects, the Central Budget has been a disappointment. But a Budget to some extent is circumscribed by previous commitments and pledges, and it is hoped that Sir James, unhampered by the legacy of predecessors, will yet present a more popular Budget in the Assembly.

It has become the vogue to affect pessimism regarding the future. But despite the setback in securities, owing to the dullness of the London Market, Bombay Textile Shares have persistently recorded a rise. The leading textile shares in Bombay enjoyed an exceptionally good year in 1934. Bombay Dyeings which was at Rs. 720 in June, 1934 are now at about Rs. 960. Central Indias soared from Rs. 195 to Rs. 325. Kohinoors and New Greats have appreciated by about 100 per cent. To what is this appreciation due and to what extent does it reflect an actual recovery in the Textile Industry?

The year 1934 has been full of events which have an important bearing on the Textile Industry. The Indo-Japanese pact restricting Japanese imports to 40 crores of yards at a tariff of 50 per cent. was the first event of the year. The Mody-Lees Pact assured that Lancashire would not press a reduction of duty beyond the removal of the actual surcharges. By the middle of the year the industry was in the grip of a labour strike, but the eventual settlement proved to be a bull point for the industry. The purchase of some of the mills of the Currimbhoy group by Bombay and Calcutta merchants, and their eventual working also acted as a stimulus to the .textile industry.

It would thus appear that the Bombay textile Industry to-day is on a fairly sound foundation. It would be too optimistic to state that the profit-earning capacity of the Bombay mills has improved, but it may be safely stated that India can now effectively counteract foreign competition in textiles, in spite of the devaluated yen. In fact there are apprehensions of Indian production over-reaching demand and a movement is afoot to check double shift working in the mills. It is almost a truism that too heady an improvement is really a curse and it is hoped that Bombay will not err on the side of over-enthusiasm.

Turning to the activities of the Provincial Council, the Tobacco Duty (District) Bill was passed into law by the Bombay Legislative Council on Friday. Mr. G. L. Winterbotham of the Bombay Chamber of Commere moved an amendment seeking to have the tobacco duty levied on the turnover basis as aegainst the population basis suggested by Government, and it was carried with the casting vote of the President. According to the calculation of Mr. Cooper the Finance Member, there are nearly 3,500 hawkers, 6,500 whole-salers, 90,000 retailers, and 2,200 temporary licences and the measure is thus of wide application and the narrow margin of support proves that it is hardly popular.

Sir Purushottamdas Thakurdas has addressed a letter to the Bombay Government on the matter of licensing of Gins and Presses on which the Government addressed a letter to the East India Cotton Association in October. The question of malpractices in the marketting of cotton has been before the Cotton Industry since 1924. In his letter to the Government Sir Purushotteamdas has defined the various abuses as follows:—mixing of different varieties of cotton, false packing, watering and adulteration. False packing in the opinion of the President of the East India Cotton Association, is not a popular abuse; adulteration of cotton with foreign materials also is not a wide-spread evil. The two malpractices that call for legislation, therefore, are the mixing of different varieties of cotton and the watering of cotton. While it is accepted that legislation is necessary in respect of these, it is also contended that hasty legislation might defeat the object. Sir Purushottamdas suggests that the refusal of railway facilities for the transport of short-staple cotton to long-staple areas might effect an improvement. These natural preventive measures are in the opinion of the Board, more salutory than actual legislation.

It should also be remembered that the co-operation of Indian States many of which are large producers of cotton are necessary for an effective prevention of these malpractices. The question has now assumed such proportions that an immediate preventive measure has become necessary. Governmental action along the lines suggested by Sir Purushottamdas should go a long way towards checking these abuses.

The report of the Chairman of the Bombay Port Trust should encourage the optimists who hold that the Port of Bombay has a bright future. In the opinion of Mr. Sharpe, the trade outlook of the year 1935-36 is more hopeful than at any time during the past five years. "The rehabilitation of trade must necessarily be a lengthy process, but order is gradually emerging from chaos and the coming financial year may reasonably be viewed with greater optimism that its predecessor." It is true that the measure adopted by the Port Trust to prevent the diversion of trade have adversely affected the Port Trust Budget but these measures are a positive gain on the right side. With all her pristine glory as a port retrieved, the accounts of the Bombay Port Trust should make hopeful reading to all and sundry.

(*Continued from page 813*)

from there one set of line going to Alwaye 17 miles away and the other to Pallam 40 miles from Kothamangalam. The transmission lines throughout consist of two independent circuits carried on galvanised steel towers spaced approximately 1,000 feet apart in the hills station and 750 feet in the plains. There can be no doubt that the completion of this project will mean a long step forward in the industrialisation of Travancore. For the initial stages, power will be supplied to only the industries existing which are now using more expensive forms of power. But it is natural that the ambition of the authorities is that electric power should be available for new industries either on a cottage of on a large scale type and that even the agriculturists should be taught to avail themselves of these facilities, and substitute electric power for the more primitive methods now in use. The foremost idea in the minds of the authorities is the establishment of a large-scale paper mill for which all the necessary raw material is readily available in the State. The provision of power has been a difficult problem ; and with the Hydro-electric project in actual working, the State itself should be able to expand its commercial activities. It will be remembered that only recently the authorities decided on the establishment of a rubber factory as a partial solution of the problem of unemployment. With the rich natural resources of the State, other enterprises are by no means difficult to organise ; and the time may come when Travancore will rank with Mysore as one of the industrially advanced states of the future Federation.

NO SOLIDARITY IN GOLD BLOC ?

POSSIBLE DEFECTIONS OF SATELLITES

By DR. PAUL EINZIG

Special for *INDIAN FINANCE*

The settlement of the "gold clause" affair provided a new opportunity for a minor stabilisation offensive. It began in Paris where the Press, with a remarkable unanimity pointed out that the decision of the Supreme Court cleared the way for the United States Administration to take a decisive step and bring monetary uncertainties to an end. Their logic was somewhat questionable, since the ruling of the Supreme Court confirmed the principle that the Administration and Congress are entitled to change the value of the currency without being penalised by having to pay holders of Government bonds in gold dollars. Had the Supreme Court upheld the gold clause, it might have been arguable that its attitude should discourage the Administration from entertaining any thoughts of an additional devaluation of the dollar. Even then, new legislation and, if necessary, a change of the constitution would have secured freedom of action in the sphere of monetary policy. As it was, the Administration has now less reason than before to relinquish its right to devalue the dollar to 50 cents.

The wish of the French Press to see the stabilisation of the dollar soon found an echo in the United States. Ex-President Hoover broke his silence in order to exhort the Administration to stabilise the dollar at once for the sake of restoring prosperity. He seemed to have forgotten that under his regime the stability of the dollar did not prevent the development of the worst crisis the United States has ever witnessed. His statement elicited an answer from Morganthau, the Secretary of the United States Treasury, who said that he was perfectly satisfied with the way the American monetary policy has worked in the past year, and can see no reason to change it. "The Treasury is still on a twentyfour-hour basis as regards monetary matters" he concluded. This statement should rule out any hopes, or suspicions, whichever may be the case, of an impending stabilisation of the dollar. The American authorities appear to be satisfied with the present state of affairs and are certainly in no hurry to burn their boats by replacing the present provisional stabilisation with definite stabilisation. Indeed, the present state of affairs combines the advantages of stability with those of a freedom of action. For the past twelve months, the dollar has been as stable as the gold currencies. At the same time, the United States authorities are in a position to change its value at a moment's notice, if that suits their purpose.

The partisans of definite stabilisation argue that the feeling of uncertainty caused by the possibility of changes in the value of the dollar is paralysing business. To some extent they are right, since the fears of an increase in the gold value of the dollar must have discouraged producers and merchants from increasing their stocks. Absurd as the idea was that President Roosevelt would undo the little good work he has succeeded in doing by raising the value of the dollar, many people firmly believed in the possibility and even probability of such a move. The gold clause action increased considerably the number of those who believed in the possibility of a revaluation of the dollar in an upward direction. The firm attitude taken up by the Administration against the rise of the dollar during the gold clause scare went, however, a long way towards reassuring the public that no such thoughts are entertained at Washington. The desision of the Supreme Court further reduced the likelihood of such a suicidal policy. It is now widely realised even in quarters decidedly unfriendly towards President Roosevelt that trade would suffer considerably if the value of the dollar were to be raised. Nobody can accuse Wall Street of being too partial towards President Roosevelt; and yet there was cheering and rejoicing when the decision of the Supreme Court was announced on February 18.

With the danger of an increase in the value of the dollar removed, the only uncertainty in the monetary sphere is the possibility of a further reduction in the gold value. That uncertainty is most decidedly a favourable point for trade. It is absurd to suggest that producers are afraid of higher prices or that consumers abstain from buying, because there is a possibility that later they may have to pay higher prices for the commodities. There is, indeed, no reason why the United States Administration should be in a great hurry to remove the possibility of a further depreciation of the dollar.

Nor is the British Government in any great hurry to give up the freedom of the pound. The complete failure of M. Flandin's efforts to come to an agreement for stabilisation leaves no doubt that the British monetary policy is not likely to undergo any fundamental change for a long time to come. Indeed, the British authorities have good reason not to commit themselves to stabilisation at the present moment. The undertone of sterling has been decidedly weak for some time past; and this is certainly not the time to think of stabilisation. Nobody knows how far the present downward movement of sterling will recede, but in continental markets sterling is already being talked down to 70 francs. There seems to be a persistent adverse pressure, and the Exchange Equalisation Account has to support sterling to moderate its decline. If sterling is weak at the time of the year when it is usually firm, its prospects during the autumn pressure are none too favourable. During the first quarter of the year, there is usually a buying pressure on sterling which enables the authorities to increase their gold stock. Since the beginning of this year, the Exchange Equalisation Account has lost gold instead of gaining; and it is difficult to see how it will be able to resist the autumn pressure. In such circumstances, it would be decidedly untimely to think of stabilisation.

A recent statement made by Dr. Coljin, the Dutch Prime Minister, concerning stabilisation created a considerable stir within and outside the Gold Bloc. In answer to questions in the Upper Chamber he declared that Holland, like the other members of the Gold Bloc, has complete freedom of action, and that he does not know whether the Gold Bloc will remain together. He also hinted at informal exchanges of views of stabilisation, which are going on, and about which the Dutch Government is being kept informed. His remarks are regarded as an indication that the idea of a devaluation of the gold currencies is being considered and is subject to exchange of views between the countries concerned. Indeed, it is highly probable that, once the countries of the Gold Bloc realise that there is no hope either for an early stabilisation of sterling and dollar or for a substantial rise in world prices, they will have to make up their minds to adjust their parities in a downward direction. It remains to be seen whether they succeed in coming to terms about concerted action or whether each member of the Gold Bloc will act independently. Meanwhile, the lira is allowed to depreciate very slowly, but persistently in relation to the franc. Its discount now amounts to 4 per cent. so that it can hardly be said to be still on a gold basis. Should the

CUT IN BRITISH INCOME-TAX ?

BULL POINT FOR GILTEDGE

FALLING POUND & STABILIZATION

By FRANCIS WILLIAMS,
City Editor, The Daily Herald, London

By Air Mail

Special for *INDIAN FINANCE*

The Federation of British Industries has this week paid its usual annual visit to the Chancellor of the Exchequer to urge a further reduction of income tax in the Budget.

The Chancellor was, again as usual, non-commital; but big industrialists and City people generally seemed hopeful that there will be a further reduction on two grounds, one political and one economic.

If the Government is contemplating a general election in the Autumn—and, despite the inevitable denials, the belief persists that that is its present intention—a further reduction in income tax would be excellent pre-election policy for the Government, which is at the moment rather unpopular with many trading interests, and which by such a reduction might hope to rally them to its support.

Secondly, and from the investment point of view, probably even more important is the possible effect of a reduction in income tax upon the Government's cheap money policy.

As previously pointed out here, the Government is pinning all its faith to cheap money but has been forced to recognise up to date that the cheap money policy has not had as many results as hoped.

This absence of results is due, in part, to the refusal of the big institutional investors such as the insurance companies and investment trusts to regard the present low interest rates as permanent.

They are holding off investment in the belief that before long a rise in yields may be forced. Many private investors, who have not yet adapted themselves to low yields, are also holding off investments, except in so far as there is a possibility of capital appreciation. They are, in other words, buying for capital appreciation rather than yields. This is dangerous in that, if it continues, it may well result in a general speculative development which will be most damaging to sound industrial recovery.

The Treasury takes the view, I believe, that a reduction in income tax by increasing the net yield on investments without any increase in actual rates would stimulate investment and, therefore, make the cheap money policy more effective.

For these two reasons it seems very likely that the Chancellor will, if at all possible, reduce income tax; and investors might well bear this in mind when buying fixed-interest securities.

There have been no developments of very particular significance in the financial situation otherwise.

Board of Trade figures of Britain's international balance of payments last year now issued show a deficit of £1,000,000; but the general view is that this is somewhat optimistic.

The deficit has only been brought down to that figure by a substantial writing up in the Board of Trade estimates of receipts from foreign investments; and on revision these figures may not be so good. Certainly, the continued decline in the £1 suggests, that the real deficit on international balance is greater than the Board of Trade figures suggest.

This decline in the £1, to which I drew attention last week, seems likely to continue as, apart from economic factors, which are forcing a fall, heavy withdrawals of Continental funds deposited in London persist.

Fortunately, the exchange equalisation account authorities that is the Bank of England—are not now attempting to check the decline.

If it is allowed to continue, it may eventually bring general international currency stabilisation nearer by removing the disparity between the £1 and the dollar, which has been one of the obstacles to stabilisation.

It will, however, of course, do nothing to remove the disparity between the franc and the dollar; but if Britain were prepared to stabilise, there is every likelihood that the French Government would agree to a currency policy even including some small devaluation of the £1 to make stabilisation effective.

While less has been heard about pepper this week, the official enquiries resulting from the liquidation of James & Shakespeare and other firms concerned may be expected to produce some interesting revelations very shortly.

The scope of the enquiry is wide enough to divulge the names of all the principals in the pool, if it is pressed with vigour, and I have every belief that in consequence of questions raised in Parliament by Members of all parties the enquiry will be pretty searching.

We may, therefore, expect some excitement here in the future.

(*Continued from page 816*)

Abyssinian conflict lead to a colonial war, the selling pressure on the lira would increase considerably, and Signor Mussolini might have to decide to abandon the Gold Bloc. In any case, we may witness this year some defections on the part of statellites of the Gold Bloc, such as Spain, Roumania, etc.

The international monetary outlook is thus far from being settled. Many things will happen before the British and American Governments consider that the time has arrived for them to link their currencies to gold. In any case, their decision will have to be preceded by the devaluation of the gold currencies. It is only when we know how we stand that we are ever likely to fix a definite rate of stabilisation for sterling. We do not want to expose ourselves to the recurrence of what happened after 1925 when several countries grossly undervalued their currencies in relation to sterling. It may be argued that since we wait for the Gold Bloc to take the first step and they wait for us to do the same, at this rate we may be waiting for each other indefinitely. In reality, however, one of the parties is bound to get tired of waiting; and it is not difficult to foresee which this party will be. Both Great Britain and the United States can well afford to wait. Neither country is in a hurry to stabilise. On the other hand, it is to the interest of the countries of the Gold Bloc to re-stabilise their currencies as soon as possible. The longer they wait, the greater the discomfort and inconvenience they have to put up with through the overvaluation of their currencies. Evidently, in this game, it is the countries with depreciated currencies that hold all the trumps.

OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

THE INDIA DEBATE

The debate on the India Bill should by rights be conceded the pride of place in this week's report. But the widespread feeling that it is an elaborate mockery of constitution-making, robs it of much of its glory. It is said to be, to repeat a time-worn simile, the famous play without the Prince of Denmark in it. One can but hope that it will not develop into an equally stark and poignant tragedy. In one sense, it is a blessing in disguise that the Churchill group have come out into the open with their reactionary ideas about India. The thin camouflage of professions for India's welfare behind which British diplomacy has concealed its operations, has never deluded the intelligentsia in India. And now that a section of British politicians has discarded even this hollow pretence, it becomes a clearer and a better-defined issue. Unfortunately, there will always be a class of people in India to whom the loaves and fishes of office will be a tolerable substitute for responsible Government. If such there be, to quote the famous oration of Brutus after the assasination of Caesar at the Capitol, him the proposed constitution has not offended ; for under the new regime Indians will undoubtedly be given important and responsible posts. But there will always remian a yawning gulf between Indianisation of the services and the grant of responsible Government to India.

The publication this week of the instruments of instruction to the Governor-General and the Governors helps to clarify the situation. Nero, history tells us, fiddled while Rome burnt. The heady speed of constitution-making, while India is chafing under a sense of injustice is the modern counterpart of that Roman complacency.

Budget Prospects

The hard-headed Britisher, however, is not concerned so much with the fate of an Eastern Empire as with the immediate budget prospects at home. The handsome surplus of last year has, in a sense, spoilt the British taxpayer ; and it is not unlikely that the country will have a rude awakening. It is true that the Chancellor of the Exchequer was very conservative in his estimates in April last. But the country was hoping against hope that another surplus budget would usher in another set of reliefs. The following two tables from this week's *Economist* show the divergence between estimates and realities both on the expenditure and revenue sides of the budget. It will be seen that, while revenue may exceed expectations, expenditure also may outstrip provisions ; particularly the supply services may provide the surprise on the expenditure side. The plethora of supplementary estimates indicates that the Chancellor was not conservative on the side of revenue alone. And from present indications the rosiest view one can take of the budget is that it will balance.

Revenue

(£ Millions)

Income Tax and Surtax ...	182.4	14.0	17.6
Customs and Excise ...	68.4	5.3	4.8
Estate Duties ...	16.5	1.3	1.4
Other taxes	16.2	1.2	0.8
Non-tax revenue ...	10.9	0.8	1.0
Total revenue ...	293.2	22.6	25.6

Expenditure

(£ Millions)

Interest and Management of National Debt ...	43.5	3.4	2.9
Other Consolidated Fund services ...	3.3	0.3	0.2
Supply services ...	135.1	10.4	11.0
Total Expenditure ...	181.9	14.1	14.1

The biggest item in the supplementary estimates is one of £2,146,300 for the cattle fund. "The Cattle Industry (Emergency Provisions) Act provided that advances might be made to the Cattle fund from the consolidated fund, but must be repaid before the end of the financial year. This estimate covers a grant to the fund sufficient to enable it to repay its loans. The advances made to date amount to £1,750,000 and the estimate is expected to cover the expenditure up to the end of March."

Months ago, I indulged in the cheap witticism that the Government were seeking the cattle track to the hearts of the constituency. That they have exploited the possibility with a vengeance is apparent from the figures available. A subsidy of £1,050,000 for the three months, April to June has been passed by the House. It is still uncertain whether the policy of the United Kingdom in regard to beef, the cardinal requirement of the taxpayer, is one of tariffs or quotas. Mr. Elliot's elucidation of the matter that the Government's intentions are "to encourage the maximum supply of produce to consumers in our market at the lowest prices consistent with a reasonable remuneration to the home produce" is hardly lucid. The fact remains, however, that the poorer classes in Great Britain consume cheaper imported meat to the exclusion of the costlier home product. The attitude of the Government towards beef production, therefore, though patriotic in the sense that the Britisher is prone to interpret prosperity in terms of cattle meat, is hardly likely to achieve the relief it is sought to be afforded to the suppliers of this national commodity.

Turning to the more intriguing situation in the international sphere, it is gratifying to record at least one bull's eye scored by the universally—accepted incompetent competitor—the League of Nations. The way the League of Nations have tackled the question of private traffic in arms leads one to hope that the incompetence of the League is more circumstantial than otherwise. It is an open

secret that the indiscriminate production and supply of arms is largely responsible for the state of incipient belligerence in the West. "Control the arms and the armaments will control themselves" is a fairly logical proposition. The recent outbreak of hostilities in South America has proved the efficacy of controlled supply of armaments as a means of ensuring peace. Since pacifist motives have hardly proved to be effective, the importance of these artificial methods of preventing an outbreak of belligerence cannot be ignored. A war-battered world wants peace at all costs whether by a control of armaments or by a natural reluctance to a recourse to arms, which the last war proved to be such a costly settlement.

U. S. A.

END OF THE SUSPENSE

America and, with her, the whole world heave a sigh of relief that the uncertainty of the Supreme Court decision on the Gold Clause case, which had been hanging over them like a cloud for nearly a month and a half, has at last been dispelled. The practical upshot of the litigation instituted by certain holders of the gold bonds was known all the world over, soon after the formal announcement of the verdict by the Supreme Court. But the news reports cannot, in the nature of things, make the position of the majority quite clear. It should seem a mystery that while the Court has denied Congress the right to abrogate the Gold Clause in federal bonds, it has also denied to the individual holders thereof any right to redress. In this the Supreme Court decision has followed the lines indicated in these columns in the issue of February 16. After examining the possibilities that the supreme court might not consent to interpret the "general welfare" clause as conferring on Congress the right to repudiate contracts to which the federal government is a party, it was pointed out that

> It is also possible that the judges are not considering a uniform decision in all the cases. That is to say, they might well make a distinction between the Gold Clause in contracts between private parties and the Gold Clause in bonds to which the Government of the United States is a party. They might hold the view that, while the Federal Government have the power to legislate on what should be considered legal tender of the country, they will not be entitled to change the terms of a contract to which they themselves are a party.

In this view, the question of the Gold Clause in regard to private contracts is far from being a complicated legal issue. The Legislature of any country should have the power to alter the legal tender and contracts for payment of money can only be in terms of the legal tender. For individuals to contract among themselves for payment in other than legal tender is to exceed the limits of the law, and they cannot therefore invoke the aid of the law for the enforcement of such contract. In America Congress has power under the constitution to coin money and regulate the value thereof. And the Court, therefore, held that 'in the light of abundant experience Congress was entitled to choose a uniform monetary system and to reject a dual system with respect to all obligations within the range of exercise of its constitutional authority.' The gold clauses clearly 'interfere with the exertion of the power granted to congress.' To uphold them would be to maintain that 'private parties' . . may make and enforce contracts which limit that authority."

It is only in the case of the contracts, to which the Federal Government is a party, that nice questions of constitutional law clearly arise. *Prima facie* the repudiation of the gold clause in this case is a unilateral alteration of the terms of the contract. Only by reasoning that the State is in the last resort the representative of individual citizens can the unjustifiable character of such repudiation be denied. Examining the question on a strictly legal basis, the Fourteenth Amendment to the Constitution, which was adopted after the Civil War, contains a section which provides that "the validity of the public debt of the United States, authorised by law, shall not be questioned." It is on the basis of this section that the Court held that Congress exceeded its powers in abrogating the gold clause in federal bonds. On this question, the judges are unanimous.

The cleavage occurs on the award to the aggrieved parties. The majority, who have dismissed the cases, have reasoned on the following lines. The only court, in which the Government can be sued without its consent, is the Court of Claims. But the Court cannot entertain any suit, unless it can be proved that an individual has sustained damage on account of an action of the Government. The Supreme Court, therefore, felt called upon to examine the question whether the individual bondholder has suffered, as a result of the unconstitutional action of Congress, damage which would entitle him to go to the Court of Claims. The Supreme Court held that "in view of the adjustment of the internal economy to the single measure of value as established by legislation of Congress and the universal availability and use throughout the country of legal tender currency in meeting all engagements, payment to the plaintiff of the amount which he demands would appear to constitute not a recoupment of loss in any proper sense, but an unjustified enrichment." The majority of the judges argue that the damage sustained by bond holders through the Government's abrogation cannot be measured by the extent of the devaluation of the dollar, as gold is no longer freely available, but only by reference to changes in the internal economy of the country since the date of the breach of the contract.

The reasoning outlined above should disturb the complacent assumption, which many have made, that the Supreme Court's decision is a mere legal quibble devised by judges who are nervous of crossing the path of the mighty Roosevelt. It must be remembered that the Court has to decide not only the power of Congress to abrogate the gold clause but also the claims of the bondholder. These are two

different, though allied, questions. People generally assume that, if it is found that Congress has no power to abrogate the gold clause, it is equal to a finding that the bondholder must get the equivalent value in devalued dollars. That Congress has exceeded its power, the Supreme Court has no doubt. But to determine the rights of the bondholder, it is necessary to recognise that the bond is a contract and the principles of the law of contract should apply. In case of breach of contract, the aggrieved party is entitled to damages. But only if damage has been sustained as a direct result of the breach of contract; and the damages have to be assessed and awarded by the court. The court may well take the view that no damage has been sustained or that damages are not assessable or are insignificant. In this case, the majority of judges contend that no damage is sustained, inasmuch as the bondholder gains in respect of his own obligations what he loses in respect of his rights under the bond. One may agree or disagree with the court. But it is not a legal quibble to say that bondholders have not sustained damage inasmuch as all values are adjusted to the new currency. The bondholder might say that his damage would be obvious, if it is supposed thit he is not going to use the proceeds of his bonds for any specific purpose. But that would merely be a claim to fulfilment of contract and not a claim for damages.

The one important question, apart from the merits and technicalities of the case, is whether or not the judgment has any political tinge. It would be nothing short of a major catastrophe if the impression should gain ground, either in America or abroad, that the decision was not made on the merits of the case. Happily, there is no room for such suspicion. Of the nine judges constituting the Supreme Court, only one is a Democrat. All the others have been appointed in the pre-Roosevelt regime; and there can be no manner of suggestion that the judges showed deference to political considerations.

The dissenting minority, however, are in great indignation. They feel that their colleagues have betrayed the Constitution. And their feelings are so worked up that they have used the words "shame" and "humiliation." It is well that there is such passionate concern for the constitution; it is, in fact, the bulwark of national liberty. But when the minority point out that the dollar might be 30 cents. tomorrow and 10 cents the day after, their arguments do not gain in strength. The controversy over the Supreme Court decision may continue for sometime; but it is well that the case has ceased to have interest for the markets.

FRANCE

PROGRESS OF THE NEW DEAL

In spite of M. Flandin's New Deal, economic recovery in France is not making any headway. Unemployment has reached the half-million figure. The number of industrial ententes formed is also not very appreciable. The enthusiasm, which was evident when the New policy was announced, has also ebbed away; and the attitude of business circles is now marked by a note of caution. While on the question of unemployment, M. Flandin had occasion to explain fully to the Chamber how the New Deal would tackle this problem. As has already been explained in these columns, he has rejected the anamolies on the ground that conditions in France are not suitable. The system of doles is in force only to a limited extent, though the cost on this count to the State Exchequer comes to nearly 160 million f. a month. Large public works schemes would not be sponsored on a liberal scale, in view of the unsatisfactory budgetary position; nor is the total internal debt of the country so small as to warrant a further rise. There have been some attempts at reducing the working hours, extension of the school-leaving age, prohibition of simultaneous employment in a public and private capacity, suspension of overtime and similar other measures; but the results achieved are not satisfactory. The Government's solution is, briefly, lower taxation with a view to restore confidence; thus bringing about automatic relief to the unemployed and general relief to the tax-payer. Whatever the method, the only instrument is cheap money and easy credit.

Unfortunately however, the problem of the New Deal is not making such satisfactory advance as was at first anticipated. The pivot of the New Deal is the raising of the National Defence Bonds and the Treasury Bills to the status of rediscountability with the Bank of France. The banks should come to hold these bills as securities and the people should have no difficulty in obtaining ready money for these bills and bonds. M. Moret has been removed from the Bank of France to ensure the co-operation of the institution; but the spirit of orthodox policy that he represented still stayed. The regents of the Bank of France are reported to be opposing the new departure in the bank policy insisted on by the Prime Minister. This was evident from the speech of M. Flandin in the Chamber during a debate. Referring to the technical application of the monetary policy, he alluded to the opposition of the "big interests" and "certain oligarchies which dare not fight openly but conspire to create difficulties." Only a day before, an official communication has been issued about the proceedings of the Council of Regents of the Bank. This in itself is most unusual and the proceedings are generally made known to the public. It is, therefore, commented that the *communique* on the occasion is intended to make it clear that M. Tannery is with the Government and that opposition from some of the Regents has been encountered.

To return to essentials, the opposition of the Bank is based, in the first place, on the disagreement with the Government view that credit can be improved, long-term money cheapened, and hoarded capital coaxed into activity by mere discounting of Treasury Bills. They would prefer the National Budget to be really balanced by resort to fresh economies. They also believe that, if the Bank of France co-operates with the Government by granting new facilities for short-term advances against Treasuries or rediscounting freely, the Government will ultimately become heavily indebted to the bank. Carrying the argument a step further, they would wish that M. Flandin should be first made responsible before the public for the Bank's new policy; before the idea of assisting the Government in the way now proposed is entertained.

The case has been well put and defined. M. Flandin will now have before him the alternative of demanding fresh legislation compelling or authorising the Bank of France to co-operate with the Government, or of adopting some other means of improving the credit position of the country and cheapening money. The question of effecting internal economies is very old and the policy of deflation which has been followed by the country all these months has failed to achieve any satisfactory results. "No more deflation and no more economies" is the cry of the day. After announcing the New policy and after having issued additional Treasury Bills, it is hardly likely that M. Flandin will hesitate to apply for the necessary powers to compel the Bank of France, if need be, in the matter of granting credits.

Air Mail Week.

This position appears to have been appreciated at last by the Bank regents, as at the close of writing, a report announces the conclusion of the Bank of France Loan Agreement. The Council of the Bank of France, it is said, has agreed to grant loans (minimum 5 days and maximum 30 days) against Treasury and National Defence Bonds up to 100 per cent. of their nominal value. The rate has been 2½ per cent. which is ⅛ per cent. above the discount rate and ¼ per cent. above the 90 day Treasury Bill rate. Apart from this concession of 7 days' advance on treasury bills and bank bills at a rate well under the rate for loans on securities, there has not been any announcement on the question of rediscountability of the Treasury Bills: but it is understood that the Bank would agree to offer holders of Treasury Bills, up to the limit of its liquid assets, the same facilities which the *Caisse des Depots* is offering to the holders of National Defence Bonds in the form of operations.

ARGENTINA

BANKING AND MONETARY REFORM

Far-reaching changes in the monetary system are involved in the legislative measures that are now before the Government of the Argentine Republic. Based on the recommendations of the Niemeyer Commission which has been at work examining the prevailing currency system with a view to making it less complicated and more easily workable, the new legislation aims at a complete change not only in the machinery but also in the essentials. To take the foreign exchange position of Argentina, it is anything but complicated. There are three distinct markets for the Argentine foreign exchange. The basic quotation of the official exchange rate (fixed at $15 to the £) is maintained roundabout this level and is utilised chiefly for buying the export bills on London. There is side by side, the average rate at which foreign exchange is allotted to the importers to enable them to import goods. This rate has been hovering round $17 to the £. There is also the free market where the prevailing rate is near about $19 with three different values prevailing. The Exchange Control Commission have always in the past entered the market and the profits made out of the difference in the buying and the selling rates have been kept on Exchange Profit Account to be utilised by the Government as a subsidy to Argentine cereals. Lately, due to the recovery in prices, the subsidy has not been found to be essential and the amount accumulated in the Exchange Profit Account has been transferred to the Foreign Currency Fund which in essentials, is not dissimilar to what the Exchange Equalisation Fund is in England. There is also a lack of uniformity in the supply of internal credit, as, Argentina being an agricultural country, exports are unstable and as she also raises foreign loans which have to be remitted home. The working of the Conversion Office as a separate unit for purposes of note issue and the absence of a Central Bank are additional factors of instability in the supply of credit.

It is to look into these wants in the internal and the external currency and banking system of the country that the Neimeyer Commission was appointed; and the recommendations made and the legislative enactments now proposed mark a distinct step forward in the economic history of the Republic. A new Central Bank is to be established into which will coalesce the existing institution of the Conversion Office, the Rediscount Committee and also a part of the functions now done by the Banco de la Nacion. The authorised capital of $30 millions is divided into three parts of 10 million dollars each—one part for the State, the other to all the commercial banks and the third to any banks which may subsequently be established in Argentina with the required minimum capital of one million dollars. Theoretically, therefore, the Banking community will have a greater voice in the regulation of the affairs of the Bank than the State and is thus a mixture of the principles of State and private ownership. Open market operations by the central bank are limited to the new consolidated bonds of the National Treasury and such other securities which the Bank may acquire. The commercial banks are bound to hold with the central bank a minimum amount of cash equivalent to 16 per cent. of their sight deposits and 8 per cent. of other deposits. The entire currency will be taken over by the Bank and the new currency will consist of paper directly based on gold instead of the dual system of gold and paper pesos new prevailing. The reserve ratio of gold is fixed at 25 per cent. of the sight liabilities and notes in circulation. Gold coin is not to pass into circulation and gold standard, in its entirely, is not to be. Entrusted with a mixture of gold standard and a gold exchange standard, the Central Bank will sell or buy in bars of 400 ounces. The Central Bank will have the additional duty of managing official exchange operations.

GERMANY

THE NEW STANDSTILL AGREEMENT

The fifth Standstill Agreement has now been concluded between the Creditor and Debtor committees. The New Agreement will be in force for a further period of one year up to February 29, 1936. The chief features of the New Agreement may briefly be summarised. First and foremost is the reduction in the global and maximum interest rate by 5 per cent., applicable to certain types of credit. In the case of cash advances to banks, the reduction is limited to ¼ per cent. Acceptance commissions will be unchanged exept in the case of credits to commercial and industrial firms where the maximum is reduced from 3 per cent. to 2 per cent per annum. This is one of the most important concessions that Germany has secured from the creditors. The saving to be effected by the cut in interest rate may not be appreciable but it must be noted that the discrepancy in interest rates paid and the current rates has been a main grievance; and Dr. Schacht had, on more than one occasion, pleaded for a reduction in the interest. The concession now granted is therefore a recognition of the debtors' claim to more equitable treatment.

The concession to the creditors consists in that they will now be able to cancel any or part of any, credit lines unavailed of for the last two years upto 50 per cent. of the amount of the line now unused. While the resumption of the Gold Diskontbank payments is not yet practicable, accumulated instalments of guaranteed lines may be satisfied by cancelling unavailed of portions and creditors who release Gold-diskontbank guarantees may cancel a corresponding unavailed of portion of other lines. The theoretical amount of the standstill credits will thus be liquidated to the extent of the unused lines that can now be cancelled.

More than the concession and counter-concessions, the agreement shows signs of more intimate understanding of the German economic position by creditors. There has not been the usual criticism about the good intentions of Germany as on previous occasions. The new agreement has been concluded more as a matter of course without much ado and this is a sure sign of the changed attitude of the creditors.

JUTE AND JUTE GOODS

JUTE

Calcutta, March 7.

The uncertain prospects of the restriction scheme are restraining the market. Some reports state that the scheme will not be as successful as predicted. Both sowing and ploughing are behind last year, though it is not certain whether this is due to restriction propaganda or belated rain.

The market has not yet recovered the confidence it had before the recent happenings in Bombay and London commodity markets.

Mills have shown very little interest in buying and only small transactions are reported. Tussa X L R was done in small quantity at Rs. 4-10 for Marwari packing. Marwari jat X L R were done at Rs. 4-12 to Rs. 4-14, while picked marks were done at Rs. 4-14 and Rs. 5 in small lots. Sellers are keen for business but will not reduce prices as it is impossible to replace anything sold.

The Board of Control of the reformed Jute Futures have decided to fix a price for the fortnightly marginal payments at a premium of annas 8 per bale per month for outstanding transactions for June delivery.

JUTE MANUFACTURES

Calcutta, March 7.

Dullness was the prevailing tone of the market. A short-lived movement in prices caused by covering business at the end of February soon relapsed into general inactivity. Prices are unchanged; 8 oz. 40 inches hessians fluctuating between Rs. 9-4 and Rs. 9-6 for ready; 10 oz. 40 inches for ready shipment was sold at Rs. 11-12 basis.

In the heavy goods section prices were well maintained. There was no selling pressure from mills which are well placed. With a poor overseas demand local operators are cautions.

Pucca bales prices have been a shade better than those of the week previous. Sellers were asking Rs. 30-8 per bale for ready shipment Firsts, but eased off when hessians became quiet after the settlement at the end of the month. Prices are about Rs. 30 to 30-4 for ready Firsts in spite of a downward tendency in the *Putka* market.

The table below shows the stocks of the Calcutta jute mills including Adamjee, Agarpara, Gagalbhai and Shree Hanuman at the end of February compared with the same date in the past two years.

COTTON AND COTTON GOODS

COTTON.

Calcutta, March 7.

No activity was noticeable in the local market last week. Mills continue to restrict buying to the minimum and other buyers are for the time being non-existent.

Reports from Bombay state that short covering was a feature over the week-end. With nothing to maintain the rising trend, it attracted a shoal of realising operations. In view of the indifferent American advices bullish inclinations may have fructified but for the distinctly easy tendency of sterling.

Trading in the Broach-April-May contract commenced at the beginning of the week at Rs. 248-4. The rate soon touched Rs. 248-8, but the improvement did not advance further as bulls showed no enterprise, liquidating their holdings.

On March 4, delivery orders were issued of 2,050 bales for Bengal March contract, the total amounting to 11,900 bales. For the Oomra March contract orders were issued for the first time for the delivery of 350 bales.

The Liverpool May rate opened at 6.02 and after improving to 6.04 reverted to the opening level.

COTTON PIECEGOODS

Calcutta, March 7.

The uncertainty about duty that held the market passed away with the publication of the Budget, restoring to it a certain amount of firmness which is likely to be sustained by the approach of the Holi Festival and the continuance of the marriage season. A fairish demand for light white goods matured at the week end. Other standard styles received attention and the turn-over recovered its previous week's volume.

The figures below show comparative imports of piece-goods into Calcutta, Bombay and Karachi in January, 1935.

GREY

	Calcutta.	Bombay.	Karachi.

BULLION

GOLD

Calcutta, March 7.

A stupendous rise in gold prices was the feature of last week's market operations. It was due to heavy withdrawal of funds by the Continent from London and the resultant fall in the sterling-franc rate. The failure of British control to check the depreciation in sterling unsettled the market and there were rumours that it was a move to force the gold bloc to abandon the gold standard. Over the week end sterling became steadier through the covering operations of Continental interests.

Ready gold in London was carried up to £7-8-0 on March 4, receding to £7-7-10½ the following day.

The Bombay rate for final settlement moved up to Rs. 36-9-9, then dropped to Rs. 36-9-3.

LONDON—Air Mail Week.

The Bank of England gold reserve against notes amounted to £192,434,126 on the 13th February showing no change as compared with the previous Wednesday.

During the week the Bank announced the purchase of £64,414 in bar gold.

The decision of the United States Supreme Court with regard to the Gold Clause was made known on February 18th. By a majority of 5 to 4 the Court upheld the right of Congress to abrogate the Gold Clause in private Bonds, but considered the action unconstitutional in the case of Government Bonds although it decided that owners of the latter had no redress against the Government unless loss or damage could be proved; such loss or damage was held not proved in those cases under consideration.

This decision removes from the Gold Market a factor which has been very prominent the last few weeks, namely the buying on account of the American Exchange Equalisation Fund which had as its object the ironing out of any undue appreciation of the U. S. dollar as compared with the other gold currencies caused by apprehension as to the result of the Supreme Court's judgment. Consequently, the volume of business in the market has contracted sharply as, apart from the usual small enquiry on private account, the chief demand appears to come from those quarters which, tempted by high premiumss, have recently sold and are now desirous of replenishing stocks at prices nearer to the exchange parities.

The total amount changing hands at the Fixing during the week approximated £1,350,000.

We quote the following passage from a recent report by the Union Corporation, Limited:—

"For the third year in succession all records for the world's gold production have been broken. Since 1931 the output has increased by 22 per cent., of which increase more than half has been due to Russia. While official statistics are still lacking, the Soviet Government has released certain information to the Press which indicates that gold production for 1934 was 50 per cent. greater than in the previous year. If this is so Russia now takes the second place from Canada.

"A noteworthy feature of 1934 is the continued fall in British Empire production for which South Africa is mainly responsible. Although both the tonnage milled and output in terms of value create new records for the Union, new production from new mines and increased plants has been too small to off-set a further reduction in the grade of ore mined which has been possible as a result of the increased gold premium. The fall of half a million fine ounces in the Union's output has been greater than the aggregate increase for other British possessions with the result that the Empire's proportion has fallen to 59.3 per cent. The only other Empire country which shows a decline is India, with the lowest figure of the century. Canada has maintained her 1933 output.

"In foreign countries gold production during 1934 shows an increase in almost every case. Chile has increased her output by 48 per cent., the United States by 27 per cent., the Philippines by 17 per cent. and Colombia by 18 per cent."

The following represents the Empire's visible stock of gold:—

SILVER

Calcutta, March 7.

Influenced by foreign advices of the possibility of the American Administration adopting inflationary measures, the market in Bombay witnessed excessive buying at the week-end, which later turned to exciting fluctuations on alternate rounds of buying and selling.

Over the week-end trading for the first settlement commenced at Rs. 72-9, improving to Rs. 72-4 on panicky buying by option dealers actuated by bullish advices from Shanghai: and as there were few sellers the rate shot up to Rs. 73-4. At this high level buying ceased and outside speculators came in as sellers.

With the reduction of 2 annas import duty, the general sentiment is optimistic and a gradual increase in price is anticipated.

London Air Mail week:

Demand from China and the Indian Bazaars was apparent at the outset of the week ending Feb. 20 and with a fair amount of general speculative buying also, prices moved upward by successive rises until quotations of 24.15/16d. for cash and 25.1/16d. for forward were registered on the 16th February. Hesitancy on account of the Gold Clause decision expected on 18th led to a slight setback of 1/8d. on that day but, with that factor disposed of, general demand has been in evidence and in spite of profit taking resales, prices rose 3/16d. on 19th and 1/8d. on 20th to 25.1/8d. for cash and 25.1/4d. for forward delivery.

America has been a buyer, and the undertone remains consistently steady. Whilst further profit taking resales may cause temporary reaction the tendency is still upwards.

The following were the United Kingdom Imports and Exports of silver registered from mid-day on the 11th Feb. to mid-day on the 18th Feb.

Imports	£
Canada	25,409
Soviet Union	57,730

SUGAR

Calcutta, March 7.

The Java sugar market remained quiet and prices fluctuated within narrow limits. During last week the *s.s. Silvermaple* arrived with a cargo of 22,000 bags and some importers endeavoured to sell out at reduced rates before arrival of these stocks. The lack of buying support from consuming centres has made it difficult for stock holders to effect sales except at much reduced rates. No interest was displayed in forward positions and no activity in this direction is likely until Java's selling policy is known as a result of the Budget announcement.

With regard to Indian sugar, the local market remained very quiet with demand from consuming centres extremely poor due to heavy stocks in dealers' hands. Now that it is known that there is no change in either Import or Excise duty prices are likely to drop slightly for ready deliveries. On the other hand stocks are reported at only 26,000 bags and with this low stock position demand should set in again shortly.

A Semarang report dated February 12, stated :—

The buying boom for export burst, but there is a fairly good market for the local and island and the Straits trade, influenced to a large extent by the prospects of advanced prices. The position at the moment is that most shippers and dealers are well stocked, and the trade demand is again sagging back to a hand to mouth stage, with the margins available on sales rather disappointing. It is now disclosed that the large Indian buying was confined to the Bombay centre and various reasons have been put forward which influenced the heavy speculation in that market. The other Indian markets did not follow and hear of no business of importance in thseo other markets. The Bombay market was started by the poor results of the cane crop in the United Provinces area, and the action of the millers. Most millers withdrew as sellers for the forward positions, and some actually purchased their standing sales for forward deliveries. It was also reported that millers had difficulty in securing cane as the farmers in some quarters preferred to make *Gur* for which a good price was ruling, than to sell the cane to the mills. Other reports refer o the bullish predictions of Astologers for the future of the sugar price, which in such a sensitive market have considerable influence.

The operations of resellers or profit-takers in India have stopped any new business with that market in the interim. The China markets have also been reluctant to pay higher prices, and we hear of no business in that market since the Chinese New Year. Enquiries were to hand but price ideas were out of line.

The total sales by the NIVAS in the interim were about 41,000 tons, *viz.* :

Jan. 29/31st	25,218 tons	about 6,000 tons WHITES for China about 9,200 tons BROWNS for Japan about 10,000 tons WHITES and BROWNS for local and Island trading.
Feb. 3/9th	15,870 tons	7,600 tons BROWNS for New Zealand balance all for local, and export to Islands and Straits.

British India.—On the Java shippers advancing prices to around 6 per cwt. Cif. resellers of earlier purchases came out at lower rates, and business reported from Bombay in Whites down to 5/5½ C. & F. for March to June and down to 5/7½ C. & F. for July to September shipments. These lower rates tempted rebuying by Java, and the market was reported steadier, with sellers quoting for Whites July/Sept. shipment at 5/9¼ Cif. For the prompt shipments the demand disappeared entirely, but holders show no move, no doubt waiting the anticipated prospects as to change of import duties in India which encouraged these earlier purchases.

Nothing new in this regard has been received recently, and also regarding the crop troubles.

Java prices remain unchanged at around 6/- per cwt. for Whites, shipments probably up to and including September. Sellers are not quoting for the further forward positions.

Stocks on the 9th February were advised as:

Calcutta	...	...
Madras	...	1,000 tons
Rangoon	...	200 ,,
Bombay	...	3,500 ,,
Karachi	...	1,300 ,,
Bhavanagar	...	5,000 ,,
Bedibunder	...	3,000 ,,

London.—The predictions for a better market have so far not been materialised, and Terminal Raws have changed little in the interim, closing buyers prices being about 1d. per cwt. lower all round. RAWS Cif U. K. were reported sold on the 6th February at 4/2¾ Cif. Later sellers held for 4/3 but there appears little buying interest in evidence recently. F. O. B. quotations remain about unchanged, but business could be done at a decline.

Buyers' prices on London Terminal Raws on the 9th February were :—

March	May	August	December
4/2¾	4/4	4/6¼	4/8

New York.—Sales of Raws reported were:

Jan.	29th	3,000 tons	Cubans,	1.78	Feb. shipment.
	30th	4,000 ,,	Porto Rcios	1.76	do.
Feb.	1st	4,000 ,,	do.	1.80	do.
	4th	10,000 ,,	do.	1.82	do.
	5th	15,000 ,,	Cubans	1.85	do.

Raw Futures have firmed up since the end of January and that market has gained from 7 to 10 points in the interim.

No special features are advised, and the rush to make sales during the earlier months of this year has not eventuated as was anticipated in some quarters.

Closing Raw Futures prices (old contract) on the 9th February were :—

March	May	July	September	December
1.94	1.98	2.04	2.08	2.15

Manila.—Report of the 15th January states that the 1935 quota for Philippines to U. S. A. is 885,096 long tons; and in that report it is estimated that only 469,064 tons will be available for shipment made up as follows :—

1935 quota ...		885,096	tons
Excess entered 1934 ...	65,139		
In U. S. Customs Custody on 31st Dec., 1934 ...	350,893	416,032	tons
Leaving available for 1935 ...		469,064	tons

Considerable pressure is being brought on the local Sugar Administration to issue special export permits for part of the sugar already milled. The storage capacity of some of the Centrals is becoming exhausted owing to their inability to ship, and they wish to avoid the extra expense of having to remove their sugar elsewhere. Holders ideas of price are still too high and no transactions have been reported. Centrifugals quoted P. 6.00 per picul ex godown.

Exchange.—Sterling has changed little in the interim, and Banks buying on London quoted at F.7.21 per £ for delivery February to September (a flat rate).

Java Sugar Exports for January 1935 were distributed as follows in Tons of 1000 kilos :—

	Tons	Tons	Last year Tons
Holland	95		
England & f. o.	18,483		
Germany	10

TEA

Calcutta, March 7, 1935.

At the Calcutta Tea Sales No. 35 on March 6, the export selection was a poor one consisting largely of "end of the season" types.

There was a good demand, especially for leaf grades, which advanced three pies per lb. Other sorts were firm.

A strong market prevailed for internal consumption, with a keen enquiry for leaf grades which advanced from 3 to 6 pies, while other kinds, except B.O.P.'s, were firm. B.O.P.'s in the absence of enquiry were lower.

Dust sold well at generally lower rates.

The following are the full particulars of Sale No. 35 :—

Tea with Export Rights.	1935	1934
Offered	6,029	2,570
Sold	5,992	2,330
Average	0-6-11	0-10-10

Tea for Internal Consumption.

	Leaf		Dust	
	1935	1934	1935	1934

Sold	9,159	3,540	5,927	3,042
Average	0-4-11	0-4-11	0-5-2	0-6-3

The following are the quotations:—

Tea with Export Rights.	19th Feb. 1935	20th Feb. 1934
Common Broken Pekoe Souchong ...	6 9	11 0
Common Broken Pekoe	7 0	11 0 to 11 3
Common Pekoe ...	7 3 to 7 6	10 9 to 11 0
Tea for Internal Consumption.		
Common Broken Pekoe Souchong ...	4 9 to 5 0	4 6 to 4 9
Common Broken Pekoe ...	5 3	4 9 to 5 0
Common Pekoe ...	6 0 to 6 3	5 6

Ceylon

At the London auctions on March 5, 19,100 packages of Ceylon tea were submitted for sale.

There was a good demand for the offerings, and good class shipping teas were a strong market.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 10d., to-day's auction 10½d. lb.; Common Broken Pekoe last auction 10½d., to-day's auction 10½d. lb.; Common Orange Pekoe last auction 10¾d., to-day's auction 10½d. lb.; Common Broken Orange Pekoe last auction 10¾d., to-day's auction 10¾d. lb.

The following were the value prices:—

Clean Common Pekoe last auction 10½d. to-day's auction 10½d. lb.; Clean Common Broken Pekoe last auction 10½d., to-day's auction 10⅝d. lb.; Clean Common Orange Pekoe last auction 10⅞d., to-day's auction 10⅞d. lb.; Clean Common Broken Orange Pekoe last auction 11d., to-day's auction 11¼d. lb.

Tea Exports

The following figures of tea exports taken from the Calcutta Customs daily entries and received periodically from Chittagong are issued by the Indian Tea Association:—

MISCELLANEOUS

WHEAT

Calcutta, March 7.

Wheat continues to follow a downward grade, prices last week dropping lower. Punjab crop stocks are sufficient to cover present requirements and the trade is not likely to engage in any activity until the new crop is on the market and the stock position clearer.

Karachi reports that the wheat market over the week-end was steady with small fluctuations, followed by a bearish sentiment and prices gave way by 12 to 14 annas per candy, July wheat being quoted at Rs. 21-9-6, the lowest since October last. The weakness was induced principally by March liquidation and favourable weather reports.

Trading was small, consisting of speculative liquidation of March contracts. On the spot market demand was confined to local mills which purchased about 10,000 bags. Arrivals at Karachi from up-country averaged 1,500 bags, a day: last week's exports having totalled 9,345 bags, of which 6,420 bags were for Bombay and 2,925 bags for Calcutta.

INDIAN TEA LICENSING COMMITTEE.

Regisration of Quota Transfers, 1934-35.

Producers of tea are hereby notified that the latest date for registration of transfers of export quota rights in respect of the year 1934-35 is Wednesday, the 20th March, 1935. Quota transfers will not be registered unless the necessary transfer forms are received by the Joint Controller concerned, from both parties to the transfer, by 5 p.m. on that date.

A. C. DANIEL,
Secretary.

INDIAN TEA LICENSING COMMITTEE.

Notification to Shippers of Tea 1934-35.

Shippers of tea are hereby notified that the latest date for applying for an ordinary export licence in respect of the year 1934-35 is Wednesday, the 20th March, 1935. Export licences applied for will not be issued by the Joint Controller concerned unless the requisite details called for on the licence form, or application form in the case of sold tea, are supplied at the time of application and must be received in the Office of the Joint Controller concerned by 5 p.m. on the above date.

A. C. DANIEL,
Secretary.

INDIAN TEA LICENSING COMMITTEE.

Special Export Licences.

Shippers of tea are hereby notified that special expost licences available for the shipment of teas unshipped at the 1st March, 1935 (shipment of which may be effected up to and including the 30th June, 1935), will be issued in exchange for ordinary export licences on application to the Joint Controller concerned and before the expiry of the first 14 days of the following year, i.e., not later than on the 14th April, 1935.

A. C. DANIEL,
Secretary.

Indian Finance

Investor's Supplement

Vol. XV. No. 12 SATURDAY, MARCH 9, 1935 Price Re. 1

YOUR INCOME FROM 52 GREAT BRITISH INDUSTRIAL COMPANIES

Do you know that by investing about £22 upwards in the THIRD and FOURTH BRITISH FIXED TRUSTS you can become part-owner of 52 GREAT COMPANIES and thus safeguard your capital by spreading it over the leading branches of British Industry?

The 52 Companies are divided into two groups or "Units"—28 in a "THIRD BRITISH" Trust Unit and 24 in a "FOURTH BRITISH" Trust Unit.

THE BRITISH FIXED TRUST Sub-Units provide investors abroad with :

(1) A SOUND LONG-TERM INVESTMENT in the form of a Bearer Certificate.

(2) REGULAR QUARTERLY DIVIDENDS collected and distributed by the Trustee.

(3) EXACT KNOWLEDGE of what they hold and its day-to-day value.

(4) A MARKETABLE SECURITY.—All the shares are quoted on the London Stock Exchange.

(5) PROSPECTS of capital appreciation and increased dividends as trade revives.

(6) SERVICES of : (a) The Trustee—LLOYDS BANK LIMITED
(b) Auditors—PRICE, WATERHOUSE & Company
(c) MANAGERS with limited powers.

Ten Sub-Unit Certificates and upwards (costing around £11) may be purchased in either of the Trusts. The buying and selling prices of the Sub-Units are based on the current market prices of the constituent shares. You may sell your holding at any time you may wish to do so. British subjects not resident in the United Kingdom holding British Fixed Trust Sub-Units are entitled to claim repayment of British Income Tax under certain conditions, particulars of which are given in the booklet.

Coupons may be presented for encashment at the current rate of exchange at the undermentioned Branches of Lloyds Bank Limited.

Write for explanatory booklet and daily quotations to LLOYDS BANK LIMITED at: Bombay, Calcutta, Karachi, Rangoon, Amritsar, Delhi, New Delhi, Lahore, Rawalpindi, Simla, Srinagar (Kashmir),

to the undermentioned Brokers:

Huson Tod & Co., Chartered Bank Bldgs., P.O. Box 122, Madras; Lewis & Jones, Bank of Baroda Bldgs., Apollo St., Fort, Bombay; Place Siddons & Gough, 32 Dalhousie Sq., Calcutta; Mahony & Co., Grahams Bldgs., 80 Strand Rd., Rangoon.

through whom orders may be sent

To S. D. ENGINEER & SON, 32 Imperial Chambers, Ballard Estate, Bombay; or to the Managers of the Trusts:

MUNICIPAL & GENERAL

SECURITIES CO. LTD.

9E, CLOAK LANE, CANNON ST., LONDON, E.C.4, ENGLAND

(Cables : Munigenco London)

"THIRD BRITISH" UNIT (1 Unit = 4000 Sub-Units)

- Austin Motor Co.
- Bolsover Colliery Co.
- British Oil & Cake Mills.
- Burma Corporation.
- Daily Mirror Newspapers.
- John Dickinson & Co.
- Dunlop Rubber Co.
- Ever Ready (Gt. Britain).
- Fairey Aviation Co.
- Imperial Chemicals.
- Imp. Continental Gas Assoc.
- London Brick Co. & Forders.

RESERVE BANK OF INDIA

Incorporated under the Reserve Bank of India Act (II of 1934)

CAPITAL Rs. 5,00,00,000

Divided into 5,00,000 shares of Rs. 100 each.

ISSUED AT Rs. 100 PER SHARE

under the terms and conditions of the Prospectus.

Under Section 47 of the Act the cumulative dividend on the shares has been fixed by the Governor-General-in-Council at $3\frac{1}{2}$ PER CENT. PER ANNUM.

Applications for shares will be received from the 22nd MARCH, 1935 to the 25th MARCH, 1935.

Applications should be made on the Prescribed Printed Form and must be accompanied by the full purchase price of the Shares applied for.

Applications will be received at any Local Head Office or branch of the Imperial Bank of India, at a Government Treasury or at any Head Post Office in India.

Copies of the Prospectus (with application form attached) can be had at any of these offices.

Indian Finance

Investors' Supplement

BELATED EXPANSION: BUT WE NEED MORE

The markets in India and in London have had a good shake-out. In all sections, prices have tumbled down. At the time of writing, fears are still prevalent that prices may go still lower.

A slight rally towards the finish is noticeable. But it is not the rally of reviving confidence.

On the other hand, the sense of panic has not left. There are quite a few people who think that a still more catastrophic fall is yet in prospect.

On Thursday of last week, the budget of the Government of India was announced. *Indian Finance* took the view that the budget was definitely and substantially favourable to giltedge. Our Budget Supplement issued on Friday urged a bullish view of government securities and, under the influence of giltedge, of shares of sound and proved industrial concerns.

HOPEFUL FORECAST

AMERICAN CONSUMPTION OF HESSIAN

(Special Cable)

From an Occasional Correspondent

New York:
March 6.

We estimate February Consumption of burlap at 44 million yards.

March, April, and May—an average of 45 million yards.

General business likely to be good over next three months.

Bombay operators, however, interpreted the budget as a bear point. While Calcutta was buying on Friday, Bombay was selling.

As we will show later, the Western Capital's reading of the budget was entirely wrong. But its operations based on such a view received strong and powerful support from the week-end developments in London.

The sterling-franc rate was rapidly going lower and lower. The Continent was selling pounds; and sterling depreciated especially in terms of gold currencies.

The British Control stood by and did nothing to arrest the decline. What was the meaning of this quiescence? Did this portend lack of any more resources in the Exchange Equalisation Fund? Or did it imply an attempt on the part of the British authorities to bring matters to a head in the gold bloc countries?

Be this as it may, Continental circles were persuaded that sterling was bound to depreciate rapidly; and that selling of sterling would be a profitable transaction.

From 74 francs to the pound a fortnight ago, the rate has come down to 70.9.

Continental funds were being withdrawn fast and furious. The flight from the pound has abated but not yet ceased.

This naturally has meant sale of sterling securities held on Continental account. Along with these sales, tired bulls and weak bulls at home started unloading.

There has been a severe crash in prices. 3½ per cent. India sterling loan came down to £94½ from £98. The corresponding rupee scrip suffered a sympathetic retrogression. At one time, 3½ per cent. Rupee Paper touched Rs. 95½. At the end, it is hesitant roundabout Rs. 96.

As the fortune of 3½ per cent. Rupee Paper has been dominating every other market in the past few months, jute shares have collapsed; so have cotton shares; so have jute and hessian. It is a big and heavy landslide over a vast area.

At long last, our authorities seem to have had a twinge of conscience. They gave intimation to the market on Thursday that currency was being expanded by Rs. 3 crores.

You may as well hope to extinguish a jute mill fire by a bucketful of water.

The expansion now effected is a day too late and a trifling too small; and, by itself, it is powerless to undo the harm.

A broker, who has uncanny knowledge of markets though he has, perhaps, never been inside a college, asked us a simple question: "What is the good of this expansion? Will an increase of three crores in the Imperial Bank's cash chest make money more easy in the market?"

ADVERSE INFLUENCES

SELLING OVER?

(Special Cable)

By Mr. R. Gordon Cummings

London:
March 7.

Excepting Kaffirs, markets were dulll on lack of business.

British Defence Estimates show an increase of £21 million. This announcement had a disturbing effect.

Political and Currency uncertainties have also been an adverse influence.

But I believe that selling pressure is over.

Sir George Schuster's expansion of Rs. 3 crores just prior to his departure was a death-bed repentance. To the giltedge and other markets which look like being in their last gasp, Sir James Grigg's expansion may well prove a posthumous proceeding, unless he follows this up with other energetic measures.

Before discussing what these measures are, we shou'd like to show why they will be justified. So far as the giltedge position is concerned, the outstanding fact is that the Government's repayment of loans will exceed the new loans by Rs. 15 crores to Rs. 20 crores. (Read the Explanatory Memorandum of the Financial Secretary and this will be clear).

Worth-While Investments:

INDIA:

FIRE-BRICKS IN INCREASING DEMAND

RELIANCE AND KUMARDHUBI

Below—par shares with assured prospects

By "Watch-dog"

The increased activity of iron and steel companies in India gives a special significance and added value to shares of fire-bricks-making companies.

Burn and Company, who own fire-brick-manufacturing concerns, are, in general terms, profitted by the better prospects for this business; but this is only one of the enterprises of which Burn and Company are owners.

Andrew Yules and Birds are also interested in the business; and, in their case, the fire-brick manufacture is carried on by companies specially formed for this purpose.

Reliance Firebrick and Pottery Company is managed by Andrew Yules; and Kumardhubi Fireclay and Silica Works by Birds. Both these companies are worth the attention of investors who seek to pick up shares which are quoting at prices not higher than par and which, for some special reason or other, have chances of early appreciation in capital value and can be relied on for steady dividend-paying capacity.

At the very start, it must be owned that fire-brick manufacture has, in past years, shown uneven profits. The following two tables showing the gross profits for Reliance and Kumardhubi over a number of years makes out this point in a glaring fashion :—

KUMARDHUBI

Profits in—	Rs.
1924	2,01,797
1925	97,383
1926	1,94,879
1927	1,94,025
1928	1,08,750
1929	2,13,898
1930	3,31,134
1931	63,266
1932	−65,089
1933	1,01,851

RELIANCE

Profits in half-year ended—	Rs.
Feb. 1930	57,865
Aug. ,, ...	48,931
Feb. 1931	13,724
Aug. ,, ...	15,017
Feb. 1932	42,389
Aug. ,, ...	24,777
Feb. 1933	52,454
Aug. ,, ...	44,573
Feb. 1934	27,256
Aug. ,, ...	28,460

Despite the profits disclosed in the first table, Kumardhubi could not pay dividends on ordinary shares in all this period, as there was a big debit balance in 1924 accounts at Rs. 3.03 lakhs. As at 1932 end, even preference shares carried a contingent liability of dividend arrears.

While the past history is somewhat discouraging, the future can be viewed with a large measure of confidence for the simple but ample reason that a prosperous and expanding Steel industry spells prosperity and expansion to fire-brick industry.

In 1933-34, the Tata Steel Works were turning out an average of 45,000 tons of finished products. In 1934-35, the average will be in excess of 55,000 tons per month. The end of 1934 saw records exceeding 60,000 tons. There is an exciting race amongst the various departments as to which can show the lustiest figures. My own idea is that while the out put of pig iron and steel ingots will be, in 1935-36, even higher than the highest record of 1934-35, it may be safely said that the finished products will be on the basis of 720,000 tons per annum. This will be 20 to 25 per cent. in excess of expectations held but eighteen months ago.

Increased tonnage of steel means, surely, increased consumption of fire-bricks. In fact, the fire-brick companies are hardly able to turn out bricks as fast and as many as the Steel Works demand.

Moreover, the Tatas have agreed with the existing fire-brick companies that they themselves will not, for five years, undertake the manufacture of fire-bricks.

Reliance and Kumardhubi are thus assured of a growing and certain market for the next quinquennium. Once they can work at full capacity, production costs come down appreciably; and margin of profits goes up equally strikingly. I look forward to exceptionally cheerful balance-sheets from these companies in the next month.

The companies, despite fluctuating fortunes in the past, have built up their reserves on a most strong foundation. So satisfactory is the position in this regard that, even if they want, there is hardly any asset which admits of further depreciation. The assets stand in the books at ridiculously low figures. The profits in the coming balance-sheets should, in large part, be available for dividend distribution.

Let me, first, analyse the accounts of the Reliance. The Capital is Rs. 6 lakhs in 60,000 shares of Rs. 10 each. Reserves are Rs. 1.60 lakhs.

On the assets side, the block, which cost Rs. 9.90 lakhs, has been depreciated to Rs. 3.30 lakhs. Net liquid asets are Rs. $4\frac{1}{4}$ lakhs.

Profit in the half-year ended August, 31, 1934 was Rs. 23,966. Depreciation was Rs. 10,000; and the dividend was four annas per share and required Rs. 15,000.

It may be predicted that, unless even the Andrew Yule conception of puritan finance is overdone, the accounts to be published next April will recommend a dividend of at least four annas. And I do not see how further increase in dividend in the following balance-sheets can at all be avoided. In 1936, dividend may well be 6 annas per half-year.

On the present basis of profits, the dividend works out to 5 per cent. tax free. A ten rupee share is quoting Rs. $9\frac{1}{4}$. This works out to an yield of 5.4 per cent. If the dividend of six annas per half-year materialises, the yield would be 8 per cent. on current market quotation.

Kumardhubi is a no less attractive proposition. Capital is Rs. 4 lakhs in ordinary shares of Rs. 10 each; and Rs. 2 lakhs in 7 per cent. (tax-free) Cum. preference shares of Rs. 100 each. Reserves are Rs. 52,500.

Assets are as under :

Description.	Gross block.	Book value.
Land ...	94,060	15,000
Machinery ...	9,22,091	1,00,000
Buildings ...	10,60,143	2,65,000
Kilns ...	4,66,652	30,000
Siding ...	16,689	100
Tramway ...	3,026	nil.
Furniture ...	31,428	500
Electric plant ...	20,754	2,900
Live Stock ...	650	nil.
Pipe Line ...	16,578	500
Total ...	25,75,072	4,14,500

I have set out, in the above table, the full details to show how thorough—over-thorough, in fact—has been the depreciation policy pursued in the past. It will be a traversity of all accounting practice if the managing agents try to appropriate, from profits, any more sums for depreciation.

Net liquid assets are Rs. 2¾ lakhs.

Profit in 1933 was Rs. 1.42 lakhs. Wherefrom the debit carried forward from 1932 and amounting to Rs. 54,246 had to be wiped off. Depreciation was Rs. 20,048. After sundry and other adjustments, and after paying preference dividend arrears for 1½ years (which absorbed Rs. 21,000), the carry-forward was Rs. 6,557.

The present position is that the debit item on the assets side has been wiped off. Inclusive of what is due for 1934, the arrears of dividend on preference shares would amount to Rs. 98,000. That is, there is nearly Rs. 50 due on each preference share of Rs. 100.

These shares are now quoting Rs. 100. They are tremendously under valued at this rate. The margin for rise is a full Rs. 50.

But the upper limit to such appreciation is set by the provision that the Company may at any time, with the sanction of a special resolution, pay off the preference shares at Rs. 105. I will not be surprised if, after the clearing-off of the dividend arrears, the Company redeems the preference shares from the surplus liquid assets.

This will greatly strengthen the position of ordinary shares. The ten-rupee share is now quoted Rs. 5. Chances of appreciation depend upon prospects of dividend distribution on ordinary shares.

What are the prospects in this respect?

On the basis of 1933 profits, the amount distributed as dividend was Rs. 21,000. Had there been no debit carried forward from 1932 accounts, the amount available would have been Rs. 75,000.

I am more or less sure that 1934 results should be definitely and substantially better. I believe that the divisible surplus should certainly be sufficient to pay off the Rs. 98,000 due on preference shares.

May-be, there may be some profit left over for a four-annas or six-annas dividend on ordinary shares.

In any case, the 1935 accounts should yield a substantial dividend for ordinary shares. Once the preference dividend arrears are wiped out, and once the preference shares themselves are redeemed—both these vents are likely in the very near future—the profits should be adequate to provide easily a ten per cent. dividend.

At Rs. 5 per share, which is the current quotation, the Kumardhubi is one of the best propositions to pick up.

INVESTMENT BREVITIES

Watch-dog is reminded by a correspondent that indulging in tips is a risky pastime. "Read tip backwards; and it is that *pit* you will find yourself in." Thanks for this tip, dear reader.

The tip is, surely, all the more welcome in troublous times like the present week. Markets have gone West. Prices have fallen precipitately. And even if, lantern in hand, you search, like Diogenes, in broad day light, you may not find a bull. Yet, I would like to discover the bulls and warn them that if they miss the present chance, they may not get another opportunity for picking up scrips so dirt-cheap. Whatever happens to London or in London, current prices of jute shares can never land the buyers with unwanted babies.

The following table shows the drastic fall in the prices of jute shares. Profits which mills are making have not gone down. It is only the mental tone of operators which has run down. Tone yourself up and buy your favourite shares with confidence. Read the table below and let its full significance soak into you :—

	Recent Highest Price Rs.	Present Quotation Rs.
Howrah ...	66—8	62
Kamarhatty ...	695	610
Fort William ...	420	375
Fort Gloster ...	795	675
Lansdowne ...	248	208
Barnagore ...	241	193
Nuddea ...	86	69
Hukumchand ...	17—12	14—8
Birla ...	19	16—4
Gourepore ...	920	765
India ...	610	460
Clive ...	41	35—8
National ...	30	25—8
Delta ...	480	410
Lawrence ...	645	560
Alliance ...	475	410
Anglo-India ...	595	570

* * * *

I understand that the budlee rates paid for Tata Steel Ordinaries and Deferreds worked out to 40 per cent. interest. The technical position is, it cannot be doubted, extremely unsound. A somewhat heavy decline seems inevitable. It should afford a splending opportunity for *bona fide* investors to step in at prices which do not appear inflated. I spent the week-end in Jamshedpur; and I have come back with the feeling that the Indian steel industry has the rosiest future. More of this in a later issue. The present price of Ordinaries is, in no sense, too high; but the market is overbought. Till there is rectification of the position in this regard, drop in price may be expected any time.

* * *

Certainly, 3½ Rupee Paper looks extremely attractive at Rs. 96. The stalwarts who rushed in at Rs. 98 are unduly wary at Rs. 96. When the rise starts, it will be heady. Most people will realise too late that they missed a golden opportunity.

* * *

I understand that there will, shortly, be a small dividend distribution on the ordinaries of British India Corporation (Cawnpore).

* * *

Ths week's expansion of currency by Rs. 3 crores may be taken as a gesture that the Government would do what is posible for easy money, if the crisis becomes graver. This is but cold comfort. It may, however, be taken as an indication that prices may not fall further.

* * *

The following figures of the gross earnings of the Tat Hydro-electric group show expansion in each case :—

	For the month of February, 1934 Rs.	For the month of February, 1935 Rs.
Tata Hydro-Electric Power Supply Co., Ltd. ...	3,42,330	3,46,378
Andhra Valley Power Supply Co., Ltd.	4,57,196	3,97,980
Tata Power Co., Ltd.	4,85,363	6,12,748

* * *

	For Fiscal year upto Feb. 28, 1934 Rs.	For current fiscal year upto Feb. 28, 1935 Rs.
Tata Hydro-Electric Power Supply Co., Ltd. ...	31,43,425	35,11,662
Andhra Valley Power Supply Co., Ltd.	37,23,841	40,02,728
Tata Power Co., Ltd.	39,26,150	45,85,682

Worth-While Investments :

BRITAIN :

HARRODS

By Mr. Gordon Cummings

In addition to its well-known store in the West End of London claimed to be the finest in the world, —this Company, which was incorporated in 1889, carries on a banking business and owns a general stores business in Manchester, together with the entire share capital of Walter Carter, Limited. It also holds 95 p.c. of the share capital of Dickins & Jones, all the 300,194 shares of D. H. Evans, and 54,000 1s. deferred shares of Harrods (Buenos Aires). In 1931 Harrods purchased the stock and goodwill of James Shoolbred and the Haymarket store of the Civil Service Co-operative Society. In 1927 the Company sold its share interest in Swan & Edgar for £1,000,000, representing a clear profit of £321,000.

The authorised capital is £4,000,000 7½ per cent. cumulative preference and £2,215,194 ordinary. Preference and ordinary dividends are paid in March and September, while each issue is transferable in £1 units.

For a number of years up to 1930 profits steadily increased ; but following the commencement of the recent trade depression sharp declines were shown in the past two years, however, profits have been steadily rising and further recovery can be looked for in view of the enterprising management. The following table summarises profits for the last ten years ended 31 January, 1935:—

	Net Profit after Tax, etc,	Pref. Div.	Ordy. % Earned.	Paid	To Reserved
	£	£	£	£	£
1926	683,571	383,571	21.0	16	25,000
1927	696,624	396,624	21.2	18½	25,000
1928	716,751	416,751	22.1	20	25.000
1929	767,656	467,656	21.4	20	25,000
1930	826,688	526,688	24.7	20	50,000
1931	742,482	442,482	20.0	20	25,000
1932	687,069	387,069	17.5	17½	15,000
1933	628,649	328,649	14.9	15	10,000
1934	676,602	376,602	17.7	15	10,000
1934	676,602	376,602	17.7	15	20,000
1935	†708,900	408,900	19.2	16	20,000

* To general reserve in 1926 and 1927 ; and to special reserve in succeeding years.
† Before charging staff bonus (against £15,000 in 1934).

It should be noted that in the case of 1935 profits, these are shown before charging any allocation for the past year earnings on the ordinary capital will be reduced to about 18.3%. Included in these profits are rents receivable and income from subsidiary and other investments. As regards the latter, comparison of the figures for 1930-31 and 1934-35 shows that rents have declined by £4,560 to £10,894, while dividends on the Dickins and Jones investment have been £25,089 for the last four years, against £40,143 in 1930-31. Dividends on the D. H. Evans holding have not changed, however, during the last few years. The most striking difference in these comparisons is the income from Government securities, etc., which was £39,096 for 1934-35 on a book cost of £1,294,034, whereas in 1930-31 similar investments valued at £1,030,176 produced an income of £52,706. This is a striking example of the effect which reducing interest rates has had on investment income. The allocation to special reserve in recent years practically represents sums allotted for writing down free-hold properties. In addition, certain capital profits have been used for the same purpose.

As disclosed by the latest balance-sheet figures the position is exceptionally strong. The balance-sheets for the last two years are summarised hereunder after making adjustments for final approproations:—

Assets—	1935.	1934.
	£	£
Goodwill ...	90,00	90,000
Property ...	*4,432,668	4,411,423
Plant, Fixtures, etc. ...	627,254	645,283
Subsidiaries—Investments ...	1,286,493	1,286,493
Liquid Assets ...	3,935,685	3,933,278
	10,372,100	10,366,477

*Freeholds, £4,207,433 ; leaseholds, £225,235.
†Cash, £685,430 ; Investments, £1,296,734 ; debtors, £1,179,234 ; stocks, £774,287.

Liabilities.		
Capital ...	6,215,194	6,215,194
Banking Department ...	1,312,967	1,315,772
Creditors, etc.	1,550,565	1,566,823
Reserves ...	1,147,159	1,141,942
P. & L. Balance ...	146,215	126,746
	10,372,100	10,366,477

A particular point of strength is the fact that the properties are free of mortgages, while Harrods have no debenture stocks outstanding. Investments in subsidiaries are made up as to £702,191 cost price for the Dickins and Jones holdings, £581,502 for the purchase price of the shares in D. H. Evans and Co. and £2,800 other subsidiary investments. These holdings appear to be reasonably valued, particularly as D. H. Evans has paid 30% dividend for the last five years, although in one or two instances these payments were not fully earned. Recent results of Dickins and Jones have not been so good; but it is satisfactory that the profits for the year just ended disclosed a sharp improvement. Government securities with a book cost of £1,294,034 showed an unrealised appreciation of £129,730 at 31 January last, while the holding in Harrods (Buenos Aires) is valued at par.

As this fine business enjoys a remarkably steady trade, there is reasonable hope that, given further recovery in economic conditions in Great Britain, a further increase in profits will be seen over the next few years. The £1 ordinary units yield over 4 1/8% at current price of 77s. If the present profit improvement continues, it may not be long before payments are restored to the old 20% dividend basis. These ordinary units are a sound investment offering scope for moderate capital appreciation. Preference dividends were covered almost 2½ times last year and at 35s. 6d. the £1 units give a well secured yield of almost 4¼%

CALCUTTA

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(By our Correspondent)

Thursday Evening, March 7.

The volume of business in the local stock exchange was comparatively smaller than for some time past owing to the prevailing uncertainties and unsettlement and no definite improvement can be expected until conditions become settled.

Government securities were distinctly weaker owing to the sharp fall in the prices of India Government's sterling securities in London. Jute Mills shares also experienced a further set-back and prices now ruling are definitely lower, than for sometime past. An alround easier tendency was in evidence in coal while extremely dull conditions have obtained in cotton section. Among Miscellaneous Industrials there was no particular feature and trading on the whole, was very much restricted. Teas remained dull and neglected.

Government Securities.—Owing to a sharp fall of India Government's 3½ per cent. Sterling Loan in London, the Giltedge section and more especially speculative rupee issues showed further weakness. All the long-dated loans declined. 3½ per cent. Government paper is quoted at the time of writing at Rs. 95-4 against the quotation of Rs. 97-4 during the last week-end. 4 per cent. Loan 1960/70 gave way to Rs. 108-8 from a quotation of Rs. 109-8. On Monday 5 per cent. Loan 1945-55 however, kept steady at the decline at Rs. 116-12 and 3½ per cent. (1947/50) showed little fluctuations and is standing at Rs. 101-13 at the time of quoting.

There are buyers for short-dated loans at full rates. Medium dated issues also kept steady. The Bank-rate remained unchanged at 3½ per cent.

Fixed Interest bearing securities.—Owing to quiet conditions prevailing everywhere the demand for Preference shares was not so pronounced although prices for the most part remained unaltered. Amongst jute mills issues business was reported in Bally at Rs. 145, Caledonians at Rs. 152. Delta changed hands at Rs. 123, Kinnisons at Rs. 154-8 and Khardah at Rs. 129, while there are sellers of Chitavalash at Rs. 131 ex-dividend.

Among others, Allahabad Bank (Pref.) recorded a deal at Rs. 132, New Ring Cotton (Pref.) changed hands at Rs. 110, and New Victoria (Pref.) at Rs. 4-10, Equitable Coal (Pref.) was marked up to slightly to Rs. 115, Tata Iron and Steel (2nd Pref.) was marked at Rs. 171, British India Corporation Pref. at Rs. 158, and Spencer & Co. (B. Pref.) at Rs. 12-12, Indo-Burma Petroleum (Pref.) was mentioned at Rs. 117-8.

Only a very small business was reported in Debentures 4 per cent. (1940) Rangoon Municipal Debentures changed hands at Rs. 103-8 while there are sellers of Calcutta Port Trust and Municipal issues without meeting any response from buyers.

Among Industrials issues, 8 per cent. (1932/42) Bharat Sugar Mills debentures changed hands at Rs. 107.

Other Investment Stocks.—Rather less business was shown in Imperial Bank's share during the current week, the enquiry from Bombay having been satisfied. The fully paid up issues have eased off to Rs. 1,605 from a quotation of Rs. 1,620 and Contributories to Rs. 400 from a quotation of Rs. 405. Central Bank's shares were also distinctly easier and can be placed at Rs. 39-8 ex-dividend. Bengal Central Banks shares kept steady at Rs. 10-4 on the announcement of a dividend of As. 8 per share for the year ended December 31, 1934.

No business was reported in any Insurance companies' shares. Among transport companies, Calcutta Tramways (ordy.) changed hands at Rs. 21-4. Bengal Assam Steamships kept steady at Rs. 228-8 and Calcutta Landing and Shipping at Rs. 15-6. Calcutta Steam Navigation recorded a deal at Rs. 122 while India General Navigation and Railways (ordy.) receded to Rs. 122.

A fair business was reported in Light Railways at steady prices. Sellers of Government Guaranteed stocks still remain scarce.

Cottons.—Extremely dull conditions have obtained in this section and trading was very much restricted without any fresh feature to comment on. Kesoram Ordinary chnged hands at round about Rs. 4 and Muir Mills (ordy.) recorded a deal at Rs. 358.

Coals.—The list of transactions reported in this section during the week under review was smaller than usual due to prevailing depression of all markets. The favourite stocks such as Amalgamated, Bengal, Burrakur, Equitable, Hurriladih, New Beerbhum, New Manbhum, Sendra, Standard and West Jamuria have given way considerably. Bengal can be obtained now at Rs. 270, and Equitable at Rs. 36. Hurriladih came back to Rs. 15-8, and New Beerbhum to Rs. 14-12. New Banbhum receded to Rs. 64-8, Pench Valley to Rs. 48, Sendra recorded a few deals round about Rs. 13-12, Standard changed hands at Rs. 31-12 and West Jamuria which was very popular quite recently even at Rs. 13 gave way to Rs. 12-8. We recommend to the Investors real and prospective to pick up the above mentioned shares at these low levels as there is fair chance of Capital appreciation in near future.

Jutes.—The easier tendency which was in evidence in this section during the previous week was more pronounced during the week under review and a feeling of uncertainty prevailed. Both Hessian and Jute markets were quiet. 9 porter Hessians came back to Rs. 9-1 and Jute to Rs. 30-12, but since then a slight recovery was made. Howrahs and Kamarhattys, the two market barometers receded to Rs. 61-10 and Rs. 608 respectively at one time on Thursday and since then due to slight improvement in the commodities and owing to some 'bear' covering rates recovered to Rs. 62 and Rs. 617 respectively. Among Rupee ten stocks Clives are quoted at Rs. 35-8, Birla at Rs. 16, Hukumchand at Rs. 14-8 and National at Rs. 35-12.

Among others Alliance was marked down to Rs. 420 from Rs. 440; Anglo-India to Rs. 510 from Rs. 540; Belvedere to Rs. 413 from Rs. 440; Cheviot to Rs. 225 from Rs. 250; Delta to Rs. 414 from Rs. 442; Fort Gloster to Rs. 869 from Rs. 722; Fort William to Rs. 373 from Rs. 395; Ganges to Rs. 405 from Rs. 440; Gourepores to Rs. 768 from Rs. 794; India to Rs. 455 from Rs. 508; Lansdownes to Rs. 208 from Rs. 228; Lawrence to Rs. 570 from Rs. 610; Megna to Rs. 44 from Rs. 48; Orient to Rs. 212 from Rs. 228; Standard to Rs. 390 from Rs. 410 and Union to Rs. 530 from Rs. 560.

It will be seen from the above list that a drop of 20 to 40 points was recorded in share values during the course of last week or so. Price may come down a little more, but we do not see a further precipitous fall as was in evidence recently. On the other hand, in our opinion, Investors should watch carefully the future movements of this section and pick up shares which have experienced severe set-back.

Electricals.—A fair business was reported in Public Utility concerns at about last levels. There are still unsatisfied buyers for Bengal Telephones Ordinary at Rs. 18-8. Both Cuttack and Muzaffurpore Electrics were asked for at current quotations while there are sellers for Bareilly at Rs. 14-8 and Dacca at Rs. 19. Upper Ganges was also on offer at Rs. 13-4; Mirzapore was marked down to Rs. 7-4

while U. P. Electrics remained steady at Rs. 166 and Rawalpindi at Rs. 28-8.

Engineering.—A definitely weaker tone has obtained in this section and sellers predominated in many instances. Bengal Iron was marked down to Rs. 4 and Indian Iron and Steel to Rs. 6-12. Indian Standard Wagon (ordy.) had sellers at Rs. 66, while Marshalls were easier at Rs. 1-8. Braithwaites were on offer at Rs. 8-12.

Sugars.—Only a limited business was put through. Balarampurs changed hands at Rs. 21-8. Buland were taken off the market at Rs. 13-4; Cawnpore Ordinary was marked at Rs. 37-8; New Savan at Rs. 13; Punjab Sugar at Rs. 317-8; and Raza at Rs. 163-8. There are sellers of Samastipore at Rs. 11, Champuran at Rs. 22 and Purtabpore at Rs. 14-12.

Miscellaneous.—This section disclosed no fresh feature. A large line of business, however, was reported in B. I. Corporation ordinary at round about Rs. 3-2 on dividend prospects and in anticipation of satisfactory working reports for the last year. Macfarlane improved to Rs. 5-6 from Rs. 4 but closed again at Rs. 5-3. Burma Corporation was steady at the decline at Rs. 6 while Britannia Biscuit and Indian Wood Products remained unchanged at last levels.

Teas.—Dull conditions have ruled over this section and although there was some improvement in Tea sales both locally and in London, no movement was in evidence in share values owing to the heavy stocks in London. Only popular stocks such as Bishunath, Hathikhira and Hasimara were dealt in low levels. We however advise the prospective investors to pick up better class stocks at their present low levels as some improvement in share values is expected before long, and this is the time for quiet buying.

Friday Evening.

A slightly better feeling was in evidence in the market to-day and in several instances. Buyers were in evidence where sellers predominated.

Government securities.—3½ per cent. Govern- paper recovered further to Rs. 96-5 while 4 per cent. Loan (1960-70) kept steady at the decline at Rs. 108-8; other Loans remained more or less unchanged.

Banks and Railways.—Nothing of any particular interest was reported here. A few deals were reported in Bengal Central Banks Shares at round about Rs. 10-4 and a transaction was reported in Mymensingh-Bhairab Bazaar at Rs. 93-8.

Preference and Debentures.—No business of any note was reported in these sections since we reported last.

Cottons.—Continued dull and neglected.

Coals.—These on the other hand, were better and buyers were in evidence for some of the favourite stocks—Bengal improved to Rs. 275, Equitable (Ordy.) to Rs. 36-8. East India changed hands at Rs. 17-12, New Beerbhum (Ordy.) was marked at Rs. 14-4, New Manbhum advanced to Rs. 65, Senda to Rs. 14 and Standard to Rs. 31-12, West Jamuria was quoted at Rs. 12-8.

Jutes.—Jute Mills' Shares opened quiet this morning with Howrahs at Rs. 61-44, but as the session progressed more buying power developed owing to some support from outside and at the time of writing the undertone kept steady. Howrahs are now quoted at Rs. 62-12 and Kamarhattys at Rs. 620. Among others Clives improved to Rs. 36-8, Hukumchands to Rs. 15 and Nationals to Rs. 26. Bally was better at Rs. 250, Barnagore at Rs. 200, Cheviot at Rs. 232, Fort Gloster at Rs. 700, Fort William at Rs. 385, Gourepore changed hands at Rs. 770. India advanced to Rs. 480, Orient was quoted at Rs. 220, Standard at Rs. 396. The closing time was steady.

Miscellaneous.—Nothing of any particular interest has to be reported in this section. Reliance Factories were enquired for and changed hands at Rs. 10; B. I. Corporation (Ordy.) kept steady at Rs. 3 cum dividend. India General Navigation (Ordy.) improved to Rs. 116.

Iron and Steel section was quiet. Bengal Iron was quoted at Rs. 4 and Indian Iron and Steel at Rs. 6-13.

MADRAS STOCK EXCHANGE

(*By Wire*)

(From Our Correspondent)

Madras, March 8, 1935.

Securities.—The securities market in Paper was especially erratic. The forward market in Bombay was closely following London where international factors pushed down the prices of India sterling loans at first. Towards the close of the week rumours of the expansion of currency by the Government of India imparted a steadier tone to the Paper market though the bull element was not strong at any time. During the week under review considerable business seems to have passed between this market and Bombay in Paper. Other loans did not meet with much enquiry either on speculative or investment account. There were no transactions in Port Trust or Municipal Debentures as also joint stock company debentures with the exception of Cochin Malabars which were done at unchanged prices. The preference share market appeared to be more active. Premier Hosiery Preferences improved to Rs. 11 with business done at this level whilst Spencer 'A' and 'B' Preference shares changed hands at last rates, scarce scrips like Buckinghams and Bangalore Wollen preferences as also Deccan sugars were done during the week. All these showed improvement on the prices previously transacted.

Banks.—Imperial Banks were firmer with fewer deals reported; Bank of Indias, Central Banks and Indian Banks were all popular. Indian Banks established a new high record at Rs. 142. Indo-Commercial Bank 'B' shares which were recently issued had buyers up to Rs. 28, *i.e.* Rs. 3 premium.

In Public Utilities Bengal Telephones were taken up at Rs. 19 whilst Rangoon Telephones continued to have buyers at Rs. 13-12 cum-dividend. Madras Telephones were in keen demand at Rs. 21-8 cum-dividend.

Electrics.—Electric supply shares were firm with good enquiry noticeable for all scrips. Business was done in Trichy Srirangams at Rs. 202, East Tanjores at Rs. 107, West Coasts at Rs. 8 and Vellores at Rs. 13-8. The Vellore Electric Corporation is expected to do considerably better in 1935-36 owing to the electrification of the two big Presidency jails and the various Government buildings. Mills were quiet but steady with the exception of Gokaks which were an erratic feature. Buckinghams were absorbed at Rs. 214; Bangalores at Rs. 150 and Vasantas at Rs. 110 whilst Premier Hosiery Ordinaries were in good demand at par. Vasanta Mills are reported to be well bought in Cotton.

Cement.—Cement shares were active especially Punjabs, Bundis and Shahabad. All the shares showed improvement though the interest was displayed in the speculative medium. Indian Cements were not so great.

Sugar.—Sugar shares were better. Balarampurs were taken up at Rs. 21-4. Deccan Sugar small shares were done at Rs. 75 and India sugars at Rs. 11-8. Mysore Sugars were again a firm feature at Rs. 28.

Planting.—In the Planting section, Rubbers were completely neglected with the exception of solitary deals in Cochin Malabars and Velliamattams. In Tea shares, Vellamalais were transacted at Rs. 8-8 and Peermades at Rs. 25. This section, on the whole, was dull and featureless.

Miscellaneous.—In the miscellaneous section, Burma Corporations and Tata Steels were the most prominent features.

MARKETS DULL AND DISCOURAGING

MR. KEYNES ON INTEREST RATES

FUTURE OF GOLD SHARES.

By R. Gordon Cummings.
(By Air Mail)

Special for "INDIAN FINANCE"

London, February 26th, 1935.

The tone of the stock markets has again been dull and discouraging, as investors are waiting a lead before taking up fresh commitments. At the beginning of the week, following the announcement of the "Gold Clause" decision, it certainly looked as though activity was to increase, but after a very short burst of speculative buying recessions were seen during Tuesday and Wednesday, and owing to lack of public buying, prices in many directions have since further dwindled away.

Gilt-edged and India stocks have been affected by doubts regarding the future long term interest rate, foreign selling and the closing of heavy option positions. Prices have fluctuated over a fairly wide field, but at the time of writing moderate recovery is taking place. After falling below 106, 3½% *War Loan* is 106⅝, while *India* 3% is 1¼ points lower at 87.

Foreign bonds and foreign railway stocks have made a mixed showing. In the case of Home railways, prices are all lower with the exception of *London & North Eastern* issues which are slightly better on the favourable dividend announcement discussed elsewhere.

Taken as a whole, industrials have been very quiet on lack of buying. At present, investors are adopting a cautious attitude until they can see more clearly the future course of interest rates. Bright features have been a small recovery in *Distillers* to 93s. and a sharp jump in *Triplex Glass* to 75s. Tobacco shares together with chemical issues and a number of motor shares have been dull. *Courtaulds* have declined to 48s. 9d. Iron, coal and steel shares have made a mixed showing, with *United Steel* closing at 27s. 6d. after being up to over 28s. Electric supply issues have been weak on some heavy forced selling.

Oil shares have again suffered from neglect, but rubber issues are showing signs of firmness on the steadiness in the price of the commodity.

The position in mining shares is discussed later. It is worth noting, however, that after sharp rises last Tuesday morning steady declines were seen until Friday mid-day, when moderate investment demand and the rise in the price of gold to a new high record of 143s. 11d. per ounce brought about an upturn in Kaffirs. Australian mining shares have been active, but prices at the close are lower than a week ago. West Africans are showing signs of activity, and I look for further rises in the near future. Indian issues have been the brightest section.

Tin shares have been weak on a sharp fall in the price of the metal, following bearish rumours. A good buying opportunity is now presented, as recovery will take place.

Mr. Keynes speaks again.

Almost a year ago, Mr. J. M. Keynes, the well-known economist, made his oracular statement at the annual meeting of the National Mutual Life Assurance Society that long-term interest rates were tending towards a level of 2 per cent. His remarks as Chairman of the National Mutual at this year's meeting have been looked forward to with considerable interest.

Mr. Keynes did not disappoint his expectant listeners at the meeting held last week. But, in my opinion, his remarks fell short of the definiteness of those of a year ago. He was not so conclusive in his statements. In fact, while still hoping for and expreciated that prospects were by no means so clear, for we were now, in his judgment, between two sets of strong conflicting forces—a lower rate of interest to maintain the national prosperity and the improvement of employment, and the serious obstacles in the way of immediate further reduction, mainly due to the lower British rates of interest compared with those prevailing abroad. We must hope that a revival of confidence elsewhere would be accompanied by a fall in foreign interest rates towards a normal parity with our own. Meanwhile, the existing disparity might make the British position slightly precarious.

In conclusion, Mr. Keynes practically admitted that the further fall in interest rates would be dependent upon the policy of the British Treasury, which could help to make true his previous forecast by offering future funding or refunding scheme securities on fixed redemption terms spread over dates from 5 to 25 years hence.

Coming from such an eminent economist, I consider that these remarks are in the nature of a danger signal, which investors would be well-advised to ponder carefully. While I still anticipate recovery in gilt-edged stocks over the next few months, I do not advise my readers to purchase stocks other than those definitely redeemable in the next 10 to 15 years, and not standing at heavy premiums. As regards holders of long-dated issues, they should consider selling in the near future, unless, of course, they are holding purely for income purposes.

I do not endorse the view of certain financial writers that the decision of the Clearing Banks to raise the minimum buying rate for bills to 1½ per cent. is an indication that a general hardening of interest rates is near at hand. Conditions in the discount market have not been profitable for sometime so that the banks cannot be blamed for trying to improve conditions.

The sharp set-back in the gilt-edged market last week was mainly due to the closing of large option positions opened up some months ago, and partly to the speech of Mr. Keynes, but not to heavy selling on the part of the large institutions, although smaller holders are still steadily realising stock on upward movements. Readers of *Indian Finance* should be prepared to follow suit in the near future.

London Brick Prosperity.

In accordance with my forecast of a few weeks ago, the full report of *London Brick Company and Forders* for 1934 shows that profits of £408,194—my estimate was £408,000—have reached a new high record, and compare with £312,612 in 1933. These figures are after charging £175,000 in each year for depreciation. As already announced, the ordinary dividend is increased by 2½ per cent. for the year to 22½ per cent., while the carry forward is £26,194 higher at £250,951. Fresh records of production and delivery were achieved in 1934.

Comparison of the last two balance-sheets shows fixed assets higher by £100,803 at £2,206,960, against which depreciation reserve is brought up to £1,425,000. Cash, investments and stocks are all higher on the year, but debtors have fallen by £52.000 to £285,725. Loans from subsidiaries appearing at £172,938 a year ago have disappeared and are replaced by advances of £57,641 to these concerns.

Despite the above satisfactory showing the £1 ordinary units have suffered from this week's dullness with a small decline to 83s. Holders should not sell.

Additional evidence of the benefits according to industries connected with the building trades from increased building expenditure is disclosed in the increase from £91,209 for 1933 to £102,434 for 1934 in the profits of *International Paint and Compositions*

Company, which is raising the ordinary dividend by 1 per cent. to 10 per cent.

Electric Power Developments.

Amongst the announcements of electric supplies companies, I notice that *Scottish Power* is taking over a further undertaking in Scotland, while *Clyde Valley Electric,* the company supplying power over a large area in and around Glasgow, is increasing the ordinary distribution for 1934 by 1 per cent. to 8 per cent. It is obvious that the latter concern is benefitting from the increasing activity of the iron, coal, steel and shipbuilding industries of the Clyde when it can restore the dividend rate to 8 per cent., as paid for a number of years up to 1930. *County of Lodnon Electric Supply,* which has widespread interests in London and the Provinces, is again making the ordinary dividend up to 10½ per cent., by a final payment of 7 per cent. for 1934, on the £5,707,109 ordinary capital.

Coal Output Higher.

Official statistics of the coal output of great Britain for the December quarter of last year show the highest production in the fourth quarter of any year since 1930. Actual production for the last three months was 57,750,000 tons, or an increase of more than 2,000,000 tons over the corresponding figure of 1933. In accordance with my previous indication output for the whole of 1934 shows a gratifying increase at 229,954,000 tons, against 207,105,800 tons in 1933. Compared with the latter year the principal increases by districts were: Durham 30,768,100 (27,606,100) tons; Yorkshire, 39,706,800 (37,252,000) tons; Scotland, 31,310,800 (29,243,300) tons; and South Wales, 35,338,900 (34,354,900) tons.

In the light of these statistics the outlook for the coal industry is more promising, and I can recommend purchases of the £1 ordinary shares of *Sheepbridge Coal & Iron* at 22s. 6d., *Stavely Coal & Iron* at 38s., *Manchester Collieries* at 12s. 3d., and *Amalgamated Anthracite Collieries* at 4s. The latter of course are speculative.

Encouragement can be obtained from the sharp increase in the profits of *Welsh Associated Collieries* from £63,252 in 1933 to £201,525 in 1934, after providing £100,000 in the past year and £115,000 in 1933 for depreciation etc. Around 21s. the 5½ per cent. £1 preferences shares are a good high yielding investment.

Other Industrial News.

The usual quarterly dividend of 10d. free of tax is being paid on March 30th on each £1 unit of *British-American Tobacco Company* ordinary stock, of which there is £23,676,761 outstanding. The £1 units are quoted at 117s.

A satisfactory increase of £23,091 to £80,187 is shown in the profits of *Currys* (cycle, motor and radio accessory, etc. dealers) for the year to January 12 last. The dividend on the 10s. ordinary shares is increased from 10 per cent. in 1934 to 15 per cent., and after transferring £12,500 to reserve the carry forward is increased by £7,687 to £13,032. Profits of a subsidiary company—*Basinghall Industrial Services* —are doubled at £19,681. It is proposed to increase the ordinary capital of Currys by £200,000 to £500,000, and to offer 100,000 shares to existing ordinary shareholders at 25s. each in the proportion of one new share to every six now held. At 27s. 6d. the existing 10s. shares yield 5½ per cent.; they are a promising investment.

For January the traffic index figure of *Cables and Wireless* was 73.2, or the highest figure for any January since 73.4 in 1932. Although considerably below the December 1934 index of 80.7, comparison with 71.8 and 69.9 in January 1934 and 1933 respectively is very favourable. It must be remembered that the December figure was exceptional owing to the Chritmas rush. The index represents the working day average for each month, while the base figure is 100 for 1929. An increase in the prices of Cables preference to 83 and the A stock to 19 reflects satisfaction with these figures.

Rail and air Traffics.

Home Railway traffics for the week ended 16 February again disclosed decreases compared with the corresponding week in 1934, the total decline for the four main lines being £26,000, against the large increase of £170,000 twelve months ago. While the returns for the current year are certainly not inspiring, I am given to understand that the figures for the current year are not disturbing railway interests, as the view is held that traffic returns for the first part of 1934 were abnormal. At that time trade recovery in this country was proceeding rapidly, and although recovery is still in progress, the pace is naturally somewhat slower. Another factor operating a year ago was the big demand for raw materials—a demand which was naturally reflected in a greater carriage of goods. During the current year a more stabilised condition of affairs should prevail with a consequent evening out of the weekly traffic figures. Actually, on an average basis, traffics are comparing favourably with those of last year.

These facts are not generally recognised, and I put them forward so that faith in Home Rail stocks will not diminish. Despite recent declines, I still favour purchases of the junior issues.

Further encouragement can be taken from the dividend increases of the *London and North-Eastern* Railway—the last of the four main line companies to make its announcement. Compared with the previous year, 3¾% is being paid on the £48,222,669 4% first preference stock and 4 1/16% on the £4,014,400 5% redeemable preference stock, both of which rank *pari passu,* against 2% and 2½% respectively for 1933. After again taking £50,000 from general revenue the carry forward is reduced by £13,610 to £43,033. As the increased dividends take £665,508 more, net revenue for 1934 has apparently increased by £626,833 during 1934, after providing £538,000 to net cost of rolling stock renewals.

Coming to the newer form of transport—aeroplanes—it is disclosed that *Imperial Airways* machines flew 216,715 miles in December, against 171,062 miles in December, 1933, while for the 9 months from 1 April, 1934, the total miles flewn was 1,983,304, compared with 1,763,959 for the similar period in 1933. Receipts for the last nine months disclose an increase of £161,564 at £1,151,938. The £1 shares are 45s. 6d.

Paper and Motors

The latest report of *Inveresk Paper Company,* which owns and controls a number of paper manufacturing concerns, and various newspapers, etc., reveals a gratifying profit increase. For the year ended 31 December, 1934, profits are £81,702, against £46,699 in 1933, and after providing £2,604 for payments under a guarantee, a full year's dividend is paid on the £1,499,950 6% first preference capital, while the carry forward is increased by £9,350. As the dividend on the first preference stock is now cumulative, the £1 units are a promising high-yielding investment at 20s.

My previous indication that all was not rosy in the motor manufacturing industry is borne out by the report of *Singer and Company* for the twelve months to 31 December last. After providing £76,467 for depreciation and special writing down there is a net loss of £26,562, which goes against a profit of £40,143 for the previous five months, when £27,953 was allowed for depreciation, etc. Dividends on the £428,525 7% preference capital are unpaid from August, 1932, while the last distribution on the £666,760 ordinary capital was 5% in 1932. The £1 ordinary shares are still fully valued despite a fall to 10s. 3d.

Future of Wholesale Warehouses

For some time, there has been a fairly general feeling that the wholesale drapery and kindred warehousing trades had at last turned the corner after a series of depressing years. This feeling, however, I must state, I have never agreed with, as I have held the view for a long time that the former prosperity of these houses would never return.

Prior to the rapid development of the chain store system and the amalgamation of widespread businesses into groups under single control, the wholesale warehouses were prosperous. The advent of large scale buying and the intensification of competition, however, forced the big and medium-sized retail stores to cut their buying prices to the very minimum. Instead of purchasing goods more or less from hand to mouth through the wholesalers, manufacturers were approached direct to quote cut prices for large lines of certain articles. By this and other means, the wholesalers have now practically lost the bulk of their old business with the big retailers. As conditions have not undergone any change during the past year, I am not surprised to hear that profits of the warehouse companies are not showing recovery. In fact, I cannot see very much hope for them.

A typical case in point is the announcement this week that profits of *Spencer Turner and Boldero* for the year to January 15, 1935 are only £19,281, against £24,052 for the previous twelve months. Even after adding £3,000 tax reserve not required to the 1935 profit the carry forward is barely maintained after meeting the 6% preference dividend and paying 2½% (against 5%) on the ordinary capital.

Further evidence of declining trade is also demonstrated by the sharp decline in the profits of *Selincourt and Sons,* warehousemen and manufacturers. For the year to 15 December, 1934 profits were only £17,660, against £34,067 in 1933. Compared with 5% for the previous twelve months, nothing is now paid on the £250,000 ordinary capital, the preference dividend being covered with a margin of only £160.

Although I do not favour the purchase of shares in the wholesale houses, I do feel that those of some of the manufacturing companies offer good prospects. An interesting event this week was the commencement of dealings in the 5% £1 cumulative preference shares of *I. & R. Morley,* the very old-established manufacturers and traders in hosiery, underwear, gloves and other wearing apparel. Of a total issued capital of £1,600,000 in £1 shares, 700,000 are 5% preference and 900,000 ordinary shares, the latter being privately held. On the basis of adjusted profits for the last nine years, preference dividends are covered on the average about three times, while surplus net assets, excluding £150,000 goodwill, of £1,508,594 at 31 December, 1934, covered the preference capital over twice. At 21s. 6d. I consider these preference shares to be a reasonable investment, giving the satisfactory yield of £4. 13s. 0d.%.

Britain's Overseas Balance

Estimated figures of Great Britain's overseas trading and financial transactions for 1934 show an excess of payments over receipts of £1,000,000. As revised estimates for 1933 show a surplus of £2,000,000, the set-back in 1934 is therefore about £3,000,000, although the final computations may show a better position—for 1933 the first computations showed a £4,000,000 deficit.

In comparison with 1933, the excess of imports of merchandise and silver bullion and specie was in 1934 £295 million, or £32 million higher than in 1933. On the other hand invisible and other exports are estimated to have risen by £31 million to £294 million, the greatest increase being £15 million to £175 million in income from overseas investments. Government receipts from overseas are placed at £9 million, against practically nothing in 1933. The total adverse balance in 1932 was £51 million.

The most satisfactory increase was that in overseas investment income, the higher figure being accunted for by the resumption of, or increase in, interest payments in default, and to higher distributions on the part of rubber, tea, gold-mining and land companies operating abroad. Against this increase there was offset, however, higher payments on British industrial ordinary shares held by foreigners.

Gold Shares

Boom conditions were very short-lived following the American "Gold Clause" decision, an off-setting factor being the proposed increase in taxation on South African mining profits during the coming fiscal year, while fears regarding the successful carrying through of a heavy settlement on Thursday last did not tend to enliven matters. As pointed out above, however, steady all-round recovery is now taking place.

Dealing first with the "Gold Clause" decision, whereby the Supreme Court of America ruled that debts entered into on a gold basis need not be discharged in gold dollars, but can be settled, both as regards principal and interest payments, by payment in depreciated currency, fears as to a fall in the price of gold are pushed further into the background. In fact, the way is now clearer for a stabilisation of currencies on the basis of gold being worth anything over 140s. per ounce, to the future benefit, naturally, of goldmining companies. The rise in the price of the metal this week to fresh high records certainly does not indicate currency stabilisation on a basis with gold being worthless than £7 an ounce.

The South African taxation proposals are, however, not so encouraging. Despite an estimated budget surplus of £2,253,000 for the fiscal year to 31 March next, revenue from gold-mining taxation is expected to fall short of the estimate by over £1,000,000, owing to the policy adopted by many companies of relieving their tax burden by working lower grade ore and increasing development expendi-

INVESTMENTS IN INDIA

THE INVESTOR'S INDIA YEAR-BOOK

is the recognized work on Investments in India. Condensed Balance Sheets and Analysis of Workings for recent years of—

Banks, Railways, Jute Companies, Coal Companies, Cotton Companies, Tea Companies (Northern India), and Miscellaneous Companies.

Also full particulars of—

Government of India Loans, Municipal and Provincial Loans, Straits Dollar Rubber Shares and Tin Mining Companies.

The 1934—35 Edition is now ready and includes Company Reports issued up to 31st December, 1934.

6, LYONS RANGE, CALCUTTA

AND FROM ALL LEADING BOOKSELLERS

ture. This short-fall it is proposed to remedy by increasing the formula for computing profits by 35% provisionally. In order to offset a reduction in distributable profits the companies can increase the grade of ore treated, or reduce development expenditure. In my opinion the policy of the South African Government is short-sighted. The gold-mining industry has contributed substantially to the recent prosperity of the Union, and nothing should be done to retard development progress.

As regards the outlook for the share market I do not look for much continued speculative activity in dividend-paying stocks until the effects of the new taxation have been fully assimilated, although I must point out that companies, amongst others, which will suffer the least under the new proposals are Simmer and Jack, Randfontein, Rose Deep, West Springs, and Durban Deep. At current levels the shares of all there consums are worth buying. I do look, however, for speculative buying of the shares of developing companies such as *Rand Leases* 10s. shares at 34s., *Klip Nigel* 5s. shares, now 9s., and *Witwatersrand Nigel* 5s. shares at 14s. 3d. As has been the case in *Venterspost* shares, now 18s. 6d., sharp rises can be expected on receipt of any favourable development news.

Turning to other gold markets, considerable satisfaction was expressed with the increased final dividends of *Mysore Gold Mining Company,* and *Champion Reef Gold Mines of India,* the distribution of the former being 1s. 9d. per share, against 1s. 6d., and the latter 2s. 9d. per share compared with 2s. Mysores have risen to 24s., and Champion Reefs to 39s. 6d., while Nundydroogs (62s.) and Ooregums (13s. 3d.) are receiving more attention.

Following last week's further rise *Commonwealth Mining* have been up to 17s. before relapsing to 13s. 6d. At around this price commitments might be reduced in order to consolidate the position. The safest purchase in this market is still *Gold Exploration and Finance of Australia* 10s. shares at 9s. 9d.

Market Pointers

Additional evidence of the benefits accruing to Investment Trusts from increasing prosperity and higher stock market prices are again shown this week by the resutls of *United States Debenture Corporation,* which records an increase of £21,300 to £238,639 in gross revenue for the year to 31 January last. After maintaining the ordinary dividend at 8%, reserve and undistributed profits are increased by £20,652. Compared with 10.9% a year ago depreciation on investments is now only 2.1%. *Hellenic and General Trust* also reports increased profits for the twelve months to 31 January last, the net figure being £27,531 up at £48,501. Ordinary distributions are resumed with a dividend of 1%, plus a bonus of 1½%, making 2½% for the year, and the carry forward is increased by £19,439 to £39,711.

There has been a fair amount of buying of the three months call option on *Associated British Malters* 5s. ordinary shares, now quoted at 9s. 6d. This company, which controls several old-estabilished malting businesses, made a good recovery during the year to 31 August last, earnings on the £250,000 ordinary capital being in excess of 20%, and over twice the 10% dividend paid. I look for further recovery in the current year, and shall be disappointed if the dividend is not restored to the 15% rate ruling prior to the depression.

In anticipation of a favourable report for 1934, the £1 ordinary shares of *Calcutta Tramways* have been subjected to some very good buying on the market view that, as the interim was raised by ½% to 3½%, the final payment may be raised by a similar percentage from 4½% for the last six months of 1933 to 5%. If this anticipation is fulfilled the shares will give a very useful yield on current price of 31s. 6d. It is believed on this side that several important extensions have recently been carried out. The report is due in April.

Press Caps 5s. ordinary shares have been in good demand up to 7s. 6d. On prospects they are still not overvalued.

It is strongly rumoured in Amsterdam rubber circles that an increase in the restrictions percentage will be made in the near future. At present the quota is 75%, but it is likely to be reduced to 70%. This should lead to a rise in the price of rubber, and of the shares.

Profits of *Clarke Chapman and Company,* engineers, for 1934 are better even than the dividend announcement indicated. After providing £9,864 for depreciation profits for the past twelve months were £29,938, against a loss of £43,931 in 1933. Deducting the 5% ordinary dividend and the preference payment, the carry forward is increased by £8,457 to £9,178. These figures increase the attractiveness of the £1 ordinary shares, now 17s. 9d.

Last week I gave my opinion that prospects for the wool industry were probably much brighter than some pessimists would lead us to believe. Judging by the report of *Wool Combers,* the leading concern in the finishing side of the business, my optimism is likely to prove correct. For the year 1934 this company made a profit of £127,874, against £109,710 in 1933, and after making up the total ordinary dividend and bonus to 26¼ per cent. tax free—an increase of 5 per cent. on the 1933 payment of 21¼ per cent. tax free—the undistributed profit balance is raised by £7,124 to £49,413. The £1 shares are obtainable at 124s.

THE BOURSES IN AIR MAIL WEEK

Paris

During the earlier part of the week, there was some indecision in most sections of the Stock Exchange in expectation of the gold clause judgment and several sharp setbacks were recorded. Government issues lost some ground as well as some Bank shares. Banque de France was quoted at 10,260 and Banque de Paris at 887. Industrials were easy and Internationals were hesitant.

Following the announcement of the gold clause a better tone was prevalent on the Bourse, and this was more manifest among Internationals than among local securities.

On February 19, Royal Dutch Petroleum were quoted at 14,350, Ris Tintos at 1,066, and Canadian Pacifics at 199. Foreign Bonds were well supported; Rentes and Bank shares ruled steady. Conditions improved the next day on the Bourse even though it started with a rather hesitating disposition owing to the overnight weaker Wall Street advices. But a sharp upward movement in Rentes and the easiness with which transactions were made proved a bullish point and brightened the markets. The rumour about the reduction of the official discount rate from 2½ per cent. proved also to be another bullish factor. Rentes were enquired for and Bank shares were firm. Internationals were easy.

On the Coulisse, Diamond shares were uninteresting throughout the week and showed no signs of activity of the previous week. Shares in the gold mining group moved within narrow limits. Rubber and oil were dull.

Berlin

Similar conditions prevailed on the Bourse during the week. Most sections were weak in the early part of the period under review and Banks were quoted low. Electricals were weak and Rayons steady. Minings and Shippings were dull. Conditions were better on February 19 and Banks were steady even though Reichsbanks were quoted low at 162½. Industrials were good and Minings better. The week ended with improved conditions, Banks registering further rises. Shippings were steady.

WALL STREET IN AIR MAIL WEEK

GOLD CLAUSE DECISION

SHORT-LIVED BOOM

BY F. ROCKE

By Air Mail

Special for "INDIAN FINANCE"

The week is important as marking the long awaited decision on the gold clause cases by the Scpreme Court. Interesting scenes were witnessed. Before the announcement of the gold clause decision, all the markets were dull, excepting giltedge. Government securities containing the gold clause advanced in expectation of an adverse decision. On the day of the announcement, Wall street was wild with excitement. Heavy short covering and new buying caused advances of between 5 and 10 points in the first few minutes after judgment was known. There was some profit-taking during the latter part of the day ; and this checked the rise in prices. Utilities were the only exception to share in the rise. But the boom proved to be short-lived ; and several losses were recorded the following day. The downward tendency continued and Rails and utilities were weak. Thus the hopes of people who thought that activity in Wall Street was revived were belied. There were no complications and speculators were not active.

In the Bond Market, the Government issues were more active. On the working day before the gold clause decision Government issues containing the gold clause advanced expecting an adverse decision on the gold clause cases. On the day of the announcement these were quoted rather lower. This section was quiet for some time. On February 21, Treasury Bonds soared and other government issues also were strong. The strength of Government bonds was due to an announcement that the Treasury had decided not to raise any new money on March 15, but would in future offer $100 millions of Bills weekly instead of $75 millions. Among foreign Bonds, Belgian, Norwegean and Czechoslovakian bonds reached new high levels for the year and Australian Government Bonds were unusually active.

Important major financing operations, are likely to develop in the near future ; and there are to be bonds to the value of $50 millions each in respect of the Bethleham Steel Corporation and the Canadian Pacific Railway Company and also refinancing by the subsidiary companies of the American Telephone and Telegraph Company involving about $90 millions and $24 millions refunding operations by the Swift International.

The mid-March financing operations of the Government which were awaited anxiously have been restricted to dealing with the maturing $528,000,000 Notes and refunding the $1,875,000,000 called Fourth Liberties.

The Rail issues have been weak as usual. Mr. Jesse Jones, the Chairman of the R. F. C. will discuss the reorganisation of the Missouri Pacific Railroad with Van Sweringen brothers next week. The Western Pacific Railroad have proposed a voluntary readjustment of the First Mortgage Fives, and is offering 50 per cent. in new bonds and 50 per cent. in Income Obligations. The R. F. C. has agreed to assist in the reorganisation and may underwrite the proposed exchange securities.

The proposed reorganisation of prices of Darber and Rio Grande was rejected on the ground that it was not quite drastic enough and a new one is being prepared.

The position of Utility Companies continues unchanged ; and they have been very weak owing to Government hostility. The Commons are quoted very low ; and there has been great buying last week in Preferreds in the expectation that the preferred stock holders would come relatively well out of the holding company split-ups which are proposed by the Administration. It would be better if there were greater discrimination with regard to the latter.

The oil prospects have been dimmed to some extent. Texas refused to participate in an agreement among oil-producing states for advancement of prices. Texas claimed to possess 92 per cent. of the production of petroleum for the nation and demanded enormous voting power. This has held up negotiations. Meanwhile Mr. Ickes, Secretary, of the Interior, is of the opinion that this industry should be converted into a public utility.

The automobile industry with its programme of selling 10 per cent. more cars than in 1934 should work alright.

Foreign car loadings in the week ended February 17 totalled $592,600 in the previous week and $590,900 in the corresponding week last year.

There has been again a decline in Steel mill activity and according to the "Iron Age" activity during the week was at 50.5 per cent. of capacity compared with 53.5 per cent. last week. But the steel sentiment is more buoyant and there is no evidences of decline in consumption although there has been a decline in the price of scrap metal.

Investment notes

The net earnings of the Caterpillar Tractor Co. in January, 1935 totalled $277,000 against $233,000 a year earlier. Earnings in 1934 were $3,651,000 or $1.94 per share against $303,000 in 1933. The quaterly dividend is now 25 c. and a greater dividend distribution can be expanded owing to increased earnings. The increase in earnings was due to increased farming expenditure and increased Government spending in relief expenditure. The Stock is now being quoted at 40 and is worth buying.

The common stock of the Timken Roller Bearing Co. can be recommended. The company produces anti-friction bearings of all types for vehicles and machinery. The capital is composed solely of 2,411,380 shares of no-par capital stock. In the first nine months of 1934 earnings equalled $1.24 per share which were considerably above those in the corresponding period of 1933. The dividend has been increased with the rise in earnings and even though at the present price the yield is low, the stock would make a good long-term recovery purchase and buying on setback is advisable.

The Remington Rand have experienced increased earnings this year. It is likely that the deficit of last year is wiped out and a resumption of dividends on the 7 per cent. First preferred stock is likely. The dividend in his stock is now $21.75 in arrears and the price is 75. It is an attractive speculative counter.

Business pointers. Power output in the week ended February 16 amounted to 1,760,562,000 kilowatt hours, an increase of 7.3 per cent. over the corresponding period of last year.

According to the Department of Commerce, the value of automotive exports during 1934 increased by $102,000,000 to $196,000,000.

Broker's loans fell $23,000,000 in the week ended February 20 to $600,000,000.

The value of building contracts awarded for all classes of construction in the 37 Eastern States during January was $99,770,000 compared with $92,720,000 in December.

FIXED TRUSTS

CAUTIONS FOR THE INVESTOR

PERFECT AND IMPERFECT FIXED TRUSTS

By MAURICE GREEN
Editor of The Financial News, London

[*The fixed trusts movement, with which India is largely unfamiliar, is particularly suited to the requirements "of this country," as there is a large middle class to whose needs the fixed trusts can cater adequately.* Indian Finance *proposes to educate public opinion on this important question; and the following article by Mr. Maurice Green, who is one of the best informed on this subject will, we are sure, be read with great interest. Mr. Gordon Cummings will shortly be writing on "What is a Fixed Trust."*]

The central idea of the fixed trust is so simple that the investor may be tempted to think that there is little or no technical complication in the running of them, and that there is room for little in the way of managerial success or the reverse. At times, the interests concerned in the management of these trusts have themselves deliberately given that impression, on occasion going so far as to say that the running of the trust is "automatic." This, however, is, as will be shown later, only a half-truth. There are, in point of fact, quite a number of pitfalls for the unwary. And indeed some of the American fixed trusts, which came to grief rather badly on technical mistakes which were made in their constitution, provided a concrete example of this.

If we look at the matter from the investor's own point of view, the first thing on which we must be satisfied is the standing and integrity of the trustee. This is of primary importance. It must be remembered that the fixed trust is not a company, but a trust fund. That being the case, neither the managers nor the trustees are under any obligation (under English law at least) to publish any accounts or to give any statutory information to certificate holders regarding its operations. The trustee is the sole custodian of the trust property and has the sole right of issuing the trust-certificates, and is, in fact, the investor's one and only protector, on whom he must absolutely rely. Again, supposing that the managers should for any reason cease to act (*e.g.* this might happen if the management was in the hands of a company, and this company went into liquidation) the trustee takes sole charge of the entire management and custodianship of the fund for the remainder of the period for which the trust is constituted.

In some articles which I wrote in *The Financial News* some two years ago, which, to the best of my knowledge, represented the first attempt to deal with the subject journalistically from a detailed and critical viewpoint, I reached the conclusion that the investor should not consider any trust, which has not as its trustee either one of the six or seven leading banks or an insurance company of first-class standing. I think that view is now held by anybody who has studied the question at all. And it is a point to which I would make no exception.

Having satisfied himself on the standing of the trustee, the investor's next step is to consider the regulations laid down for the operation of the trust: that is to say, the Trust Deed drawn up between the managers and the trustees. This document is all-important, as the contracts contained therein, once drawn up, cannot be departed from and govern the *modus operandi* of the trust for its whole duration The manager and trustees of any fixed trust should, in the writer's opinion, always make copies of the trust deed available for public inspection. Otherwise the investor will be buying certificates with inadequate means of knowing what he is purchasing.

A certain amount of the trust deed comprises only such matters as are common to any trust fund. But there are also a number of special matters which relate to the running of a fixed trust as such. Perhaps we can see best what this trust deed ought to contain by considering certain defects which creep in rather easily and which should be studiously avoided. These may be summarised as follows:

(1) Forced sales.
(2) Forced Purchases.
(3) Forced Retentions.

(1) *Forced Sales.*

This particular defect was seen at its worst in concrete form in the case of the American trusts in 1930 and 1931. In many cases these trusts were so constituted that, in cases where dividends were passed (or even merely reduced) on any of the shares forming part of the unit, such shares had to be sold whether the managers or the trustees liked it or not. The consequences of this provision were appalling, especially as in most cases a definite time limit was fixed within which these sales had to be effected. Such a position was, of course, a gift to professional operators, who could calculate with almost complete certainty how many shares they could sell "short" with the certainty of being able to buy back from the fixed trusts at a handsome profit.

All the fixed trusts formed in Britain have, I believe, avoided this pitfall. The normal clause covering the point in the Trust Deed is to the effect that "the Managers may.....require the Trustee to sell and the Trustee shall thereupon sell.....the shares," and such sales are in most cases without a definite time limit except in so far as it is determined by what is legally "reasonable."

It is certainly desirable that there should be no fixed time limit, and also that the managers and trustees should have power to sell all *or part* of the shares of a given company included in the portfolio.

(2) *Forced Purchases.*

It is easy to see that cases might arise when, owing to the market in a share included in the trust's portfolio having narrowed, the continuation of purchases by the Trust for inclusion in the Unit might result in the price of the share being artificially bid up to excessive levels, with consequent loss to the Trust certificate-holders.

The following clauses, covering cases in which a share may be "eliminated" from the unit, are typical of the right sort of way to deal with the problem:—

"If . . . . . (*a*) It has become impracticable by reason of the limited amount of shares available to purchase sufficient shares of any company.....

or (*b*) The shares of any company have risen to a price which in the opinion of the Managers is economically unsound."

Such clauses give the managers the necessary scope for discontinuing purchase of shares when the market is short of them at reasonable prices.

(3) *Forced Retentions.*

Naturally one of the chief disadvantages of a completely fixed trust would be the necessity for retaining in the portfolio shares in concerns which were clearly going downhill. While, therefore, anything in the

nature of forced sales should be avoided, it is very desirable for the managers to be at liberty to effect the elimination of a share from the unit and the sale of the shares held if it should be advantageous to do so. Provision, therefore, has to be made for selling and eliminating a share where this becomes desirable.

In the earlier days of the British fixed trusts, managers were inclined to be excessively modest. They were so anxious to convince the public that they could not be let down by any managerial action that they limited themselves to being able to sell and eliminate shares only under the most definite and stringent conditions. Such conditions were:

1. Where a dividend was reduced.
2. Where there appeared to be good reason for expecting that the dividend would be reduced.
3. Where the shares were no longer quoted on the London Stock Exchange.
4. Where the shares were at an uneconomic price owing to a shortage of supply in the market.

This clause has been mentioned previously under the heading of "forced purchases."

Later on, however, the trust deeds became rather more ambitious. In several cases they have been worded so that the managers may require the trustees to sell if:

1. The shares are for any reason considered to be at an uneconomic price.
2. If for any other *specified reason* it appears desirable to sell the shares.

With regard to Clause No. 2, it should be noted that the managers must specify a reason to the trustees. This is a necessary and valuable safeguard against any improper behaviour by the managers, since the trustees may refuse the managers' request if it has no reasonable grounds and the trustees could hardly be in a position to do so unless the managers were compelled to specify the actual reason for their wishing to sell.

It may be mentioned here that in most cases the trustees are the sole ultimate judges of their own action in such a matter and this is another example of the importance of having trustees of first-class standing.

In all such matters it is difficult to avoid reaching the conclusion that the maximum degree of freedom which is compatible with proper control by the trustees over the managers is the ideal to be sought. It is little use tying the managers' hands completely. They should not be forced to sell, to purchase, or to retain, under specific conditions, but they should be *allowed* to do so in all reasonable contingencies which make it desirable, and it is certainly of value to have a general permissive clause which covers the odd contingency which cannot be foreseen in advance, provided that a certain check still remains in the hands of the trustees. If the investor, when purchasing a fixed trust certificate, makes certain that the trust deed gives full liberty to the managers to the extent outlined above, he may be satisfied on the technical merits of the trust's working.

Apart from these technical matters there are certain other factors which the investor must consider. In the first place, it is usual and more or less unavoidable practice for the managers to take their service charge for the full 21 years, or whatever it may be, of the duration of the Trust by adding it to the purchase price of the certificates. In these circumstances it is clear that dishonest managers and dishonest trustees together might terminate the trust by eliminating the shares almost immediately after the sale of certificates. The managers would thereby pocket the 21 years' service charge for, may-be, less than a year's work. Once again the status of the trustee is the safeguard against any such procedure.

Nothing has been said so far regarding the actual securities in a Trust's portfolio. Up to a point, this is rather outside the scope of an article such as this. All fixed trusts naturally make available full particulars of the shares constituting the "Unit," and the investor must consider the shares included by individual trusts on their merits. Nothing can usefully be said in a general way on this matter. It is, however, worth pointing out that the investor should make quite certain for himself that the managers of a trust have chosen shares, which enjoy a reasonably wide and free market. Otherwise, there is an obvious risk that in the case of a share, in which there is only a narrow market, buying by the trust may easily result in a somewhat unjustified and artificial rise in the price of the share, with obvious detriment to the certificate holder.

The investor should also look closely at the shares, and also at the method of distribution of income, in assessing the yield on certificates which is claimed by the trust managers. It is not, alas, altogether unknown for managers to show a high yield on the certificates by such practices as including a few gold-mining shares with a high current yield but a very short life or selling bonus share issues and "rights" and including the proceeds in the distribution rate for the purpose of calculating the yield. Such procedure is, of course, wholly undesirable; and the investor should make sure for himself what is the true yield without taking into account anything which is, properly speaking, in the nature of a return of capital.

Last, but perhaps most important of all, comes the question of the investor's attitude to buying and selling certificates (or "sub-units"). It must be remembered, in the first place, that the purchase price of certificates to the investor, according to London practice, includes not only the brokerage and other expenses incidental to the purchase of the under-lying securities but also the full management or service charge for the twenty-one years or whatever period it is for which the trust is constituted. This charge may amount to somewhere around seven to ten per cent. of the net purchase price, and in consequence, where the full purchase price of the certificates is, say 21 the liquidation value (*i.e.* the only price at which the holder is *absolutely* certain of being able to sell his shares may be as low as 18/-). To avoid such an anomaly, the managers of fixed trusts normally quote a price at a small margin below the 'offered' price, say 20/3, at which they are prepared to buy back sub-units from holders who wish to sell. The managers can only do this without loss to themselves, however, when they can find new buyers for the certificates which they themselves repurchase, so that it is not necessary for them to go to the expense of actually selling the underlying securities. Of course, most managers will stretch a point with regard to this, and will not insist on being able to match up bargains day by day. But it is clear at the same time that, if there was a real run of holders who wanted to sell, the managers would not be able to maintain their "buying back price," and holders would have to be content with the "liquidation price," which might well be a full 3/- below the price at which the certificates were currently offered.

It is vitally necessary for the investor to appreciate such a situation and to realise that it may at any time arise. Unless he is compelled by circumstances to sell at such a period, he should most certainly avoid doing so, as he would be merely throwing money away. He would, in fact, be paying a full twenty-one year service charge for, perhaps, only a few years' actual service.

This situation would, of course, arise in any case if, in circumstances such as those suggested previously, the managers should for any reason cease to act. In that case, the trustees would not—indeed, probably could not-make a buying-back price on their own account. It is, therefore, advisable for the investor to satisfy himself on the standing and probable solvency of the managers. In any event, of course, the trustee will look after the trust property; and, if the investor definitely regards his interest as a lock-up investment, he need not worry about this. But the investor who is at all concerned with selling facilities most definitely should. The best trustees, it should be noted, provide against the failure of managements to some extent by insisting on keeping the money representing the "service charge" in a special account in "escrow," releasing it only in annual instalments, so that the money required for the management work is always there.

That completes the summary of the main cautionary notes that should be addressed to the investor. One must assume that the investor will not touch trusts which come out under thoroughly bad auspices, as there is no knowledge, even if it were obtainable, and no sort of safe-guard which will really protect him in such a case. I have confined myself to suggesting how technical defects in a trust's constitution may be detected, how an investor in fixed trust certificates should assess their worth, and what attitude he should take as regards buying and selling. I have, in fact, tried to give the investor advice as regards *honoest* trusts only. And this, since nothing can help the man who is deceived by the obvious "black sheep," I believe to be the only sort of advice which can be of real value.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From our Correspondent)

Bombay, Friday Evening,
March 8, 1935.

Money.—Money was easy with inter-bank call fluctuating between and 2 and 3 per cent. and closing at 2½ per cent.

Exchange.—Exchange was easier with Banks selling T.T. at 1s. 6 5/64d. for near delivery; 1s. 6 1/16d. for March; 1s. 6 1/32d. for April; 1s. 6 1/64d. for May-June. Banks are buying 3 months bills at 1s. 6 5/32d.

On weak sterling advices, Rupee Security market ruled weak with 3½ per cent. done as low as Rs. 95-7 though firmed up at close on better London advices 3½ per cent. Rupee paper are now better at Rs. 96-6. 1945-55 closed steady though lower at Rs. 116-8; 1941 at Rs. 110/14; 1947-50 at Rs. 102; 1943 at Rs. 105-14; 1960-70 at Rs. 108-14; 1955-60 at Rs. 116-2; 1935 at Rs. 100-15; 1939-44 at Rs. 108-4; 1940-43 at Rs. 109-4; 1938-40 at Rs. 108-6; Bombay Development at Rs. 101-15.

Shares.—Except for Cements, the market trend throughout the week has been a little bearish partly due to weakness in giltedged market.

Textiles.—Textiles seem practically neglected and on some selling pressure most of the leading scrips have closed easier. Bombay Dyeings on good selling took downward trend from Rs. 945 and closed at Rs. 928-12. Central Indias were lower at Rs. 368-12; Centuries at Rs. 300; golabas at Rs. 145; Gokaks at Rs. 216-4; Kohinoors at Rs. 232-8; New Great at Rs. 175-4; Swadeshis at Rs. 230.

Hydro-Electrics.—This group followed the general trend of the market and lost a good number of points at close. Andhras are down by 20 points at Rs. 1,772-8; Hydros lower at Rs. 176-14; Powers after being done as high as R. 1,750 are now at Rs. 1,725.

As mentioned in our previous report, Tata Power earnings for the month of February is very good but would remind in this connection that activity in this scrip is overdone and therefore, we advocate liquidation at current levels. Earnings of Andhra and Hydro Companies are lower than the previous month.

Steels.—On nervous selling, Ordinaries reached the low level of Rs. 154 and Deferreds Rs. 690, though on scattered support closed at Rs. 158-4 and Rs. 715 respectively. Still we feel that reaction is due in Ordinaries and Deferreds, and advocate purchases at lower levels. We maintain the same constructive attitude towards the 2nd Preferences and favour investment purchases at current levels of about Rs. 172.

Cements.—Cements were steady at higher levels and there was good deal of enquiry for Bundis and Shahabads during this week also. We feel they ought to move up further. Punjabs are now at Rs. 30-8 ex-dividend; and we favour profit taking since the scrip is considerably overvalued. Gwalior closed at Rs. 132-8; Indian at Rs. 52-8; Bundi at Rs. 47; Katni Deferred at Rs. 1485; Ordinary at Rs. 425; Okha at Rs. 234-6; Shahabad at Rs. 458-12 and United at Rs. 90.

Miscellaneous.—There seems to be good activity in Belapur Sugars which closed at Rs. 320. We feel this price a little high and recommend liquidation of holdings. Bombay Burmas were lower at Rs. 421-4; for New share Rs. 130; Telephones were better at Rs. 120-8; Bombay steams at Rs. 308-2; Bombay Trams at Rs. 168-7; Petrols were lower at Rs. 3-14; Construction steady at Rs. 82-8.

Banks and Insurance.—Imperial Bank fully paid and partly paid shares were slightly easier at close at Rs. 1,620 and Rs. 403-12. Barodas were quoting Rs. 102-8 ex-dividend; Centrals at Rs. 39; Bank of Indias R. 122-8 and Unions Rs. 6.

New Indias were slightly lower at Rs. 47; Oriental Life steady at Rs. 4,750.

LONDON STOCK EXCHANGE

The week under review has been very discouraging. The giltedge section was very weak. Indian Loans were steadier than Home Funds. On March 6, 3½ Indian Stock was quoted as low as 94½, 4½ per cent. 1958-68 at 117, 2½ per cent. Consols at 84¼, 4 per cent. Funding Loan at 117, 3½ per cent. War Loan at 105 and 4 per cent. Victory Bonds at 114. There was some improvement however, on the following day and 3½ per cent. 1931 was quoted at 96, 3½ per cent. 1958-68 at 117, 2½ per cent. Consols at 84¾, 4 per cent. Funding Loan at 117, 3½ per cent. War Loan at 105½, and Victory Bonds at 114.

Among other sections Rubbers and oils declined.

Teas were unchanged.

Minings were less active.

Home Rails showed a sagging tendency on report of decreased earnings.

Industrials were dull and featureless.

NEW YORK STOCK EXCHANGE

Thursday:

The market was dull on account of sterling exchange situation and uncertainty about Washington's currency policy. Brokers' loans were up to 95 millions dollars. United States Steel Company are working 46 per cent .capacity.

Guarantee Trust declared a dividend of 3 dollars quarterly, compared 5 dollars, the previous payment; hence prices were down from 320 to 262. American Cyanamid quoted 16, and has declared a dividend of 16 cents quarterly.

COMPANY REPORTS

HURILADIH COAL CO., LD.

Report for the half-year ended 31st December, 1934.

After providing Rs. 14,746-0-0 for Depreciation, the Accounts show a balance of Rs. 62,433-0-8 at credit of Profit and Loss Account, including Rs. 27,832-7-10 brought forward from last half-year.

The Directors recommend that this should be allocated as follows:—

To payment of a dividend on the Ordinary Capital at the rate of 10 per cent. per annum, free of Income-Tax for the half-year ended 31st December, 1934 ...	40,000	0	0
Leaving to Carry forward	22,433	0	8
Total ...	62,433	0	8

Net Raisings during the half-year were 53,001 tons during the previous six months and 45,778 tons in the corresponding period of 1933.

Despatches amounted to 53,534 tons against 61,006 tons and 64,753 tons in the preceding two half-years.

Stocks totalled 203 tons on 31st December, 1934.

Collieries.—Owing to the improved demand for coal, the Directors decided to re-open Aekhalpur Colliery and Coal-raising recommenced in January, 1935. It is hoped this will result in increased earnings.

General.—Prices for steam coal have not shown any improvement over the previous period, but prices for slack and dust coals have improved considerably, a good demand having arisen for these qualities.

Restriction of output scheme.—The Government of India have refused the request made by the Coal Industry for a scheme of output restriction and in the opinion of the Directors this is a wise decision in present circumstances. The industry awaits with considerable interest the details of scheme for the conservation of coal which Government proposes as an alternative to restriction.

E. G. Abbott, G. W. Leeson, G. R. Campbell, G. L. Scott, K. J. Nicholson—Directors.

Messrs. Macneill & Co.—Managing Agents.

WEST JAMURIA COAL CO., LD.

Report for the half-year ended 31st December, 1934.

After providing Rs. 19,697-0-0 for Depreciation and and transferring Rs. 25,000-0-0 to Development Fund the Accounts show a balance of Rs. 27,490-4-9 at credit of Profit and Loss Account including Rs. 26,394-15-9 brought forward from the last half year. The Directors propose that this should be carried forward.

Net raisings during the half-year were 74,493 tons compared with 87,987 tons during the previous six months and 69,817 tons in the corresponding half-year on 1933.

Despatches amounted to 74,745 tons compared with 88,287 tons and 72,552 tons in the preceding two half-years. Stocks totalled 2,685 tons on 31st December, 1934.

General.—Prices for Steam coal have not shown any improvement over the previous period, but prices for slack and dust coals have improved considerably, a good demand having arisen for these qualities.

Restriction of output schemes.—The Government of India have refused the request made by the Coal Industry for a scheme of output restriction and in the opinion of the Directors this is a wise decision in present circumstances. The Industry awaits with considerable interest the details of a scheme for the conservation of coal which Government proposes as an alternative to restriction.

Messrs. Macneill & Co.—Managing Agents.

(*Continued from page 831*)

This is a bullish factor of such compelling value that even continued bearish advices from London, bearish tactics by Bombay and clumsy tactics by the Government will prove of little avail in preventing ultimate recovery and rapid rise thereafter.

In other words, we are more than ever convinced that despite the setback of this week, and despite the uncertainty of the immediate and near outlook, giltedge in India must establish new records in the next fiscal year.

With a future so assured, is it not the duty of the Finance Member to come to the rescue especially when a crisis more serious than this week's seems imminent?

Now, what are the measures which we suggest as necessary in the present situation?

They are: (1) expansion of currency for a total of Rs. 10 crores; and (2) utilisation of debt redemption fund (for the full amount of Rs. 3 crores if necessary) to purchase securities from the open market.

A good part of the sums set apart for sinking fund in previous years was utilised not for debt redemption but for debt avoidance. The best way of using this fund is to redeem debt by buying up securities—and not merely avoiding debt by reducing the new loan total.

The Imperial Bank and the Government flooded the market with scrips of 3½ per cent. Rupee Paper by unloading large parcels of Paper two months ago. They sold roundabout Rs. 97/8. They can now pick up roundabout Rs. 96/8.

It is a profitable transaction. Apart from profit, it is a duty which the Government should not neglect to do.

We believe that if purchases for a crore of 3½ per cent. Rupee Paper be made jointly by the Imperial Bank and the Controller of the Currency, it will make all the difference in the giltedge situation. And this change in giltedge will induce a marvellous change in every other market.

The short view of markets may look disturbing and disquieting. The long view remains as favourable as we opined in the Budget Supplement.

EQUITABLE COAL CO., LD.

Report for the half-year ended 31st December, 1934.

After providing Rs. 85,711-0-0 for Depreciation the accounts show a sum of Rs. 3,30,586-15-8 at credit of Profit and Loss Account including Rs. 66,326-11-0 brought forward from last half-year. The Directors recommend that this should be allocated as follows :—

	Rs.	A.	P.
To payment of a dividend on the preference capital at the rate of 6 per cent. per annum free of income-tax, for the half-year ended 31st December, 1934	12,000	0	0
To payment of a dividend on the ordinary capital at the rate of 20 per cent. per annum free of income-tax, for the half-year ended 31st December, 1934 ...	2,00,000	0	0
Leaving to carry forward ...	1,18,586	15	8
Total ...	3,30,586	15	8

Net Raisings—Raisings during the half-year were 3,78,637 tons compared with 3,69,185 tons during the previous six months and 3,14,679 tons during the corresponding period of 1933.

Despatches were 3,79,552 tons against 3,78,568 tons and 3,34,391 tons in the preceding two half-years.

Stocks stood at 9,278 tons at the close of the half-year, including coal at Kidderpore Docks and at Depots in India and abroad.

Debentures.—6 bonds were redeemed during the period. The company is prepared to purchase the whole of the outstanding Debentures on terms which can be ascertained from the Managing Agents. Debenture holders are reminded that formal notice of repayment will be issued during the current year.

Debenture Redemption Fund—Rs. 6,000 has been transferred from this fund in reduction of plant and machinery.

Collieries.—As a result of the development programme carried out in recent years the Company's collieries are in good condition and able to produce a large output at a reasonable cost.

Jamuria colliery is now producing and despatching the largest output ever recorded for anyone colliery in the Raneegunge Coal fields.

General.—Prices for Steam Coal have not shown any improvement over the previous period, but prices for slack and dust coals have improved considerably, a good demand having arisen for these qualities.

Restriction of output scheme.—The Government of India have refused the request made by the Coal Industry for a scheme of output restriction and in the opoinion of the directors this is a wise decision in the present circumstances. The industry awaits with considerable interest the details of a scheme for the conseravtion of coal which Government proposes as an alternative to restriction.

MUNDULPORE COAL COMPANY, LD.

Report for the half-year ended 31st December, 1934.

The Accounts show a balance of Rs. 7,490-9-7 at credit of Profit and Loss Account. The Directors propose that this should be carried forward.

General.—Owing to the improved demand for coal, the Directors have decided to reopen the Mundulpore Colliery and it is hoped to recommence coal-raising in April, 1935.

Restriction of output scheme—The Government of India have refused the request made by the coal industry for a scheme of output restriction and in the opinion of the Directors, this is a wise decision in present circumstances. The industry waits with considerable interest the details of a scheme for the conservation of coal which Government proposes as an alternative to restriction of output.

E. G. Abbott, G. W. Leeson, G. R. Campbell, G. L. Scott, K. J. Nicolson—Directors.

Messrs. Macneill & Co.—Managing Agents.

THE EASTERN BANK, LIMITED.

The Eastern Bank Limited, have received the following telegram from their London Office advising final dividend recommended for the year ending 31st December last.

"Net profit including brought forward £1,81,766/18/- Annual Meeting will be held 20th March. Directors recommend final dividend at the rate of 3/- per share less Income-Tax at the rate of 4/6 per £ less 2/8.628d. relief in respect of Dominion Income-Tax making net Income-Tax per £1/9.372d. Placed to Contingency Account £40,000. Carried forward £51,766/18/- dividend payable on and after 23rd March. Transfer Books closed from 16th March to 30th March both days inclusive. In addition in order to mark 25th Anniversary of formation of Bank Directors recommend bonus 3/- per share less Income-Tax at the same net rate as dividend."

INDIAN FINANCE YEAR-BOOK, 1934

LONDON PRESS OPINIONS

The Times

Useful Reference Work

Mr. C. S. Rangaswami, Managing Editor of the Calcutta weekly, *Indian Finance* now on a visit to this country, and his colleague, Mr. P. R. Srinivas, are to be congratulated upon the thoroughness of the *Indian Finance Year-Book, 1934*, Calcutta, Rs. 5 (7s. 6d.) It is valuable for the comparative tables given in all the sections, which comprise accounts of the India Government and the Provincial Governments; currency and monetary tables; external and internal trade in the chief commodities, industries, banks, insurance, public utilities, transport, co-operation and population.

Imports of cotton piecegoods of various descriptions from different countries are shown in millions of yards, figures being given of pre-war, war and post-war averages (each covering a five-year period) and of each year from 1929-30. Similarly, there is given the composition of the paper currency reserve under ten headings for the last day of each month since March, 1914. Each main section is preceded by an instructive survey of events and conditions in 1933-34.

A useful feature of the book is the tabular statement showing the working of the Tariff Board since its establishment in 1923, comprising the subject of enquiry, the recommendations of the Board, and the action taken thereon by Government. The industrial section is full and explanatory. The Year-Book will be of value to all who wish to be well informed on Indian economics.

The Financial Times

"Indian Finance Year-Book, 1934."

A Practical Guide to Current Problems.

The Joint authors of *Indian Finance Year-Book, 1934*. were wise not to subordinate the quality of this invaluable compendium to the rigorous requirements of a time table. The result is a notable contribution to Indian economic literature, as well as an indispensable work of reference, for the merchant, student and politician alike.

It would be difficult to imagine a more comprehensive and up-to-date compilation of facts and inferences, which should be in the hands of all who aspire to a proper understanding of the Indian problem. The national finances, including the provincial budgets and railway accounts, banking, currency, monetary and trade—overseas and internal—statistics are all marshalled and presented, with comparative figures in many cases for the preceding ten years, in convenient and attractive form.

Separate sections are devoted to industry, banking, insurance, public utilities, transport and co-operative societies. The history and working of the Indian Tariff Board are reviewed, and a feature of the banking and insurance section is the analyses of the balance sheets of the leading British, Indian and foreign undertakings operating in India. The introductions to each chapter are well written and informative. The correctness of the facts can hardly be disputed. The authors' conclusions, if not always equally indisputable, are set out with obvious sincerity and based upon the knowledge and experience of one of the most successful and well informed Indian financial journalists.

The Policy

Indian Finance Year book. 1934 (Calcutta, Rs. 5)

The issue of this important publication so late in the year is regretted by the joint editors, P. R. Srinivas and C. S. Rangaswami. In the compilation of the book they encountered great difficulties in endeavouring to cover the entire field and were unwilling to subordinate the quality of the work to the requirements of the time table. The Year Book is an excellent survey of the National finance of India in 1933-34. It shows that India, having passed through a period of unprecedented deperession has now emerged into a better era. A brief résumé of the National Finances in 1934, given at the beginning of the book, deals with the finances of each Province separately, giving a survey of the Provincial Budget, and the taxation proposals for 1935.

The Daily Herald

Financial details are regarded by many as being uninteresting. Sometimes they are. But when they are intelligently illustrated they often provide most interesting studies.

An example of the latter kind of financial record is the *Indian Finance Year-Book. 1934*, which is an annual supplement to *Indian Finance*. The editor is P. R. Srinivas, and the Year-Book is published from 20, British Indian Street, Calcutta, at the price of five rupees.

It covers the entire national economic life of India and should prove of particular interest to investors in Indian securities at the present time. It provides a layman's study of the situation, with interesting sidelights on the human side of Indian problems, but a study which should at the same time provide the expert, the banker and merchant with the information he requires.

Discussing the means by which budgetary equilibrium has been established in the various provinces the editor, while congratulating the Governments concerned, does not hesitate to point out that "such improvement as has been effected has been at the cost of high human suffering, and that in the centre the very claim of Government to having balanced the budget is open to doubt and question."

The Financial News

"Indian Finance Year-Book, 1934,"

The Indian Finance Year-Book, 1934. (Indian Finance, Calcutta, Rs. 5) copies, of which have just reached this country, is a notable contribution to Indian economic literature. It is an indispensable work of reference and a most comprehensive compilation of facts and inferences. Statistics on national finances, provincial budgets and railway accounts, banking, currency, and trade, are all presented, with comparative figures in many cases for the preceding ten years, in convenient form. Industry, banking, insurance, public utilities and transport are dealt with in separate sections.

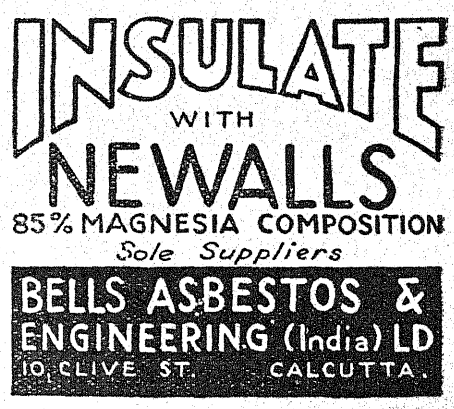
INDUSTRIES SUPPLEMENT



RESEARCH AND INDUSTRY

The value of research to industry is a commonplace as well of discussions in industrial associations as of textbooks of economics. Governments too, all the world over pay their homage to the value of research. And yet in India there is so little done by way of research into the technical problems of industry, that one almost despairs of the country ever being able to overcome this serious shortcoming. Though the pioneers in the field of Indian industry fully recognised the value of research, and we have a token thereof in the institute at Bangalore under the directorship of Sir C. V. Raman, it is doubtful if in the rank and file of our industrialists there is adequate recognition of the extent to which sustained research can enrich them and the nation. The report of the Advisory Council of the Department of Scientific and Industrial Research, which was published early in the year in Britain, contains a record of past achievements and a programme for the future which should sting a country like ours into some activity in this important sphere. Many, who at the time of an annual meeting of an industrial association pay lip service to the idea of research, often entertain in their own minds a scepticism, born of the feeling that research is, after all, a fetish over which cool and calculating businessmen will not go into raptures. There are some who also imagine that they can obtain the benefits of research at others' expense. And even among those, who are fully aware of the tangible advantage of research, there are many who believe that the expenses should be found almost *in toto* by the Government, in as much as the benefits would be reaped by the nation as a whole and not by any particular industry or any section thereof.

To these misconceptions, the report of the Advisory Council offers a much needed corrective. The Advisory Council in Britain have carefully estimated the outlay during these years on research, the sources from which the required amounts were found, and the actual yield thereon in so far as it is calculable in terms of pound, shilling and pence. The report shows that since 1917 the State had contributed £1 million and the contribution of industry was £1¾ million. At the moment, the respective shares of the State and industry for research are £65,000 and £170,000 respectively. It will be found that in the past British industry had more of the burden of the expenditure of research than the State. Even more important is the finding of the report that in the few cases, where it was possible to assess the value of the researches, the annual return on the outlay on research was several times the total of the expenditure. That is, the dividend on this investment runs to several hundred per cent. On the basis of definite past experience, the Council has come to the conclusion that the Research Association has passed through the stage in which it can be regarded as a mere experiment. Its results are sufficient to induce British industry to regard it as part of its permanent organisation.

The programme laid down for the future bears in full the impress of this conviction. The Council has no doubt that many of the Research Associations are working on too small a scale and that an expansion is clearly called for. It is calculated that the contribution made by industry to the associations amount on the average to not more than 7s. 6d., per £1,000 of net output. The work, which these associations have so far done, must be regarded only as an index of their potentiality ; and if they are to tackle adequately the fundamental problems, they will have to be assured of the full support of the industry and the Government, both of whom are the beneficiaries of research activity.

According to the *Annual Engineering Review of the Times Trade and Engineering Supplement*, the programme for the coming year shows that both the Government and industry recognise at once the value of the work in the past and of the need for increased assistance in the future. As Chairman of the Advisory Council, Lord Rutherford announced last year that the Government were prepared to increase the amount provided for the assistance of research associations by £40,000 and that there was a good prospect that it would be increased in the coming years. It is, of course, a condition of this promise that the associations would obtain increased support from industry as well. The princpal sections of British industry have already made up their minds to increase, for their part, their outlay on research. The Cotton Research Association is reported to have endeavoured to increase its expenditure from £52,000 to £82,000 a year. The Department of Scientific and Industrial Research have agreed to make a block grant of £15,000 a year, if the annual income of the Association from trade and other approved sources reaches £37,000. As an inducement for the trade to put out more money on research, the Department has promised to grant £500 more for every £500 which the trade finds, up to a maximum additional grant of £20,000. In Rayon research the block grant is £1,500 for £500 from the trade, with further additions on the £500 to £500 basis up to £3,000 for the year. The Empire Cotton Growing Corporation has trebled its annual contribution of £1,000. The Shirley Institute is thus assured of sufficient money to tackle the long distance researches and to elucidate the day-to-day works problems of the members of the industry.

(*Continued on page 875*)

SILK INDUSTRY

MYSORE'S MEASURES

The silk industry in Mysore is passing through a period of great depression, in spite of the generous support given by the Mysore Durbar. Along with Kashmir, Mysore is feeling the growing pressure of foreign competition, notably that of Japan, as the protection granted by the Government of India is both inadequate and not of sufficient duration. Recognising the seriousness of the situation the Mysore Durbar have adopted the following measures to assist the industry in withstanding foreign competition on the expiry of the period of five years' protection.

(1) Reduction in the cost of mulberry leaves by encouraging the planting of mulberry trees in place of mulberry bushes.

(2) The supply of disease free seed to all silk worm rearers instead of only to a small percentage of them.

(3) The supply of cross-breed seed which gives a better yield of cocoons and,

(4) Finding a market for silk waste by establishing a silk waste spinning plant.

To implement these measures, the Mysore Government have sanctioned, on the recommendation of the Director of Industries and Commerce, Rs. 30,000 in addition to Rs. 40,360 for the Sericultural Department during the current year.

The imports of raw Silk, Silk Yarns, Silk Mixtures, etc., have increased considerably since the Government of India Textile Protection Bill came into operation from 1st May, 1934. The quantity of Raw Silk imported into India during the six months ended October, 1934, is 1,029,854 lbs. against 9,56,373 lbs. during the corresponding period of 1933. The average calculated value (Ex-duty per lb.) of Raw Silk during the above period of 1934 is about Rs. 2-12-2 against Rs. 3-1-6 during the corresponding period of the previous year, showing a fall of about 5 annas and 4 pies per lb. The price of Mysore Silk (of Kempanahalli quality) that was Rs. 4-2-0 per lb. in April, 1934, *i.e.*, just before the protection came in, fell to Rs. 3-12-0 per lb. in the May, 1934, *i.e.*, after protection to the Silk Industry came into operation and the price of Canton Silk in Bangalore Market that was Rs. 3-14-0 per lb. in April, 1934, fell to Rs. 3-10-0 per lb. in May, 1934. Thus, in spite of the protection afforded, prices of Raw Silk have fallen to an appreciable extent due to increased competion of Foreign Raw Silk and its manufactures. The price of Canton Silk, which rose in September and October, 1934, to Rs. 4-5-0 has gone down again to about Rs. 4.

Substantial increases in the import of fabrics mixed with silk and of silk yarn took place for the same periods in 1934 and 1933—the former figures being 4,559,884 yards and 7,044,685 yards respectively, and the latter figures being 1,496,423 lbs. and 888,050 lbs. respectively.

The figures for Spun Silk were not being shown seperately previous to protection to Silk Industry. The quantity imported into India since May, 1934, to end of October, 1934, is 1,407,363 lbs. The competition of Spun Silk is on the increase. There has been enormous increase in the import of Artificial Silk during the above period and figures for 1933 and 1934 are 4,478,131 lbs. and 8,112,985 respectively. The total value of imports of the above mentioned articles during the five months ending September, 1934, has gone up to Rs. 2,45,83,522 against Rs. 1,50,24,988 during the corresponding period of the previous year.

The value of foreign raw silk imported into Bangalore City during the five months July-November, 1934, is approximately Rs. 2,02,621, a very considerable increase on the imports at the same time in 1933.

The proposal to start a factory for spinning and weaving silk waste has reached the stage when a location is being considered—the choice lying between Chennaputna and Closepet. Both are within the 40 miles of Bangalore and cheap labour, water and fuel are available, with Chennapatna being considered more healthy. A joint stock company with an influential directorate is about to be formed. The factory will, in the first instance, be managed by Japanese experts. The total share capital of the company will be about Rs. 5,00,000 divided into 50,000 shares of Rs. 10 each.

(*Continued from page 873*)

It might be useful to cite here a few instances of the new fields of productive activity opened up by research. The Wool Research Association, for instance, has evolved a new process for producing unshrinkable woollen fabrics. It is claimed that it largely prevents the irritation to sensitive skins sometimes caused by wool. The process is applied to loose wool and sliver. It is also claimed that these facts can be used in the production of new novelty effects in fabrics such as the attainment of colour contrast with single bath dyeings. Protection of clothing against moth and of furs in storage has made significant advances during this period. The fastness of dyed stuffs in textiles has been investigated from various standpoints. The tanning industry has been benefited by the application of the methods of X-ray crystal analysis. On the basis of the difference in the X-ray patterns of good quality leather and of inferior quality, it would soon be possible to determine easily and accurately the particular stage in the tanning process at which fibre damage occurs. Research will soon place at the disposal of the tanner a potent weapon against his worst enemy, namely, moulds and bacteria. The manufacturer of boots and shoes will before long have instruments which will enable the measurement of the density of leather and its permeability to air and water and the strength and stretchiness of shoe materials. The Rubber Research Association has to its credit the invention of a new type of raw material known as "powdered rubber" which will not only enable economies in the production of certain types of rubber articles, but will also render possible the development of new uses for this commodity. We have given only a few samples of the varied activities of the industrial research associations ; but they should suffice to open the eyes of the Government and industry alike to the danger of continued neglect of research.

CALCUTTA

TWO YEARS OF THE WORKING OF THE OTTAWA AGREEMENT

By DR. P. S. LOKANATHAN, M.A., D.Sc.,

The aim of this article is to examine in the light of available data the effects of the Ottawa Agreement on India's trade and industry. Now that the agreement has been working for 2 years it is purposeless to enter into the barren controversy as to the justification for an Indo-British Trade Agreement. This at least may be said for it, that, had India stood outside the Agreement in 1932, she would have had to face the unequal competition of other Empire goods entering the British market at preferential rates. To that extent, her export trade would have adversely affected in a most important and stable market. The only assumption, on which the argument against any kind of trade agreement with Great Britain can be pressed, is that the British Government would not dare to penalise Indian exports, in view firstly, of the large vested interests of its people in the Indian jute, tea and other industries and secondly, of the power of India to remove the existing differential duties in favour of Great Britain. Such speculations are futile. The more useful and promising line of enquiry will be to find out how far the particular trade agreement concluded at Ottawa has justified itself ; so that, when the time comes at the end of this year to review or cancel it, we may be able to decide firmly with precise knowledge of its actual working.

Effects not easy to measure

But this is by no means an easy task. It is even doubtful if, with all the statistics relating to trade developments during the last few years, it will be possible to draw reliable inferences as to the utility or otherwise of the Indo-British trade agreement. For the interactions of even one disturbing factor on India's trade are not easy of measurement. One might suppose an absolutely one-sided agreement by which country A secures preferential treatment for its exports in country B would have wholly beneficial effects. While generally this may be so, it is possible that in certain circumstances, the preferences may have the unexpected result of a diminution in A's trade ; because, if the countries which previously sold to B now found themselves unable to sell, their capacity to buy not only from B but also from A would be reduced, with the result that in the long run the diversion of trade to country B may only result in a loss to A. When to this is added the fact that every kind of trade agreement is based upon *quid pro quo* and that to secure a preference a country will also have to offer a preference in turn, the result will become even more incalculable. Thus the difficulties of the non-preferred countries in selling their goods will reduce their capacities to buy and lead to a diminution in the exports of the country which has granted preference to a particular country.

This, then, is the nature of the problem to be studied. Has the Ottawa Agreement resulted in an increase of India's trade or at least prevented a fall in her export trade which would have occurred but for it? An increase in her trade with Great Britain cannot by itself prove anything ; for diversion of trade to Great Britain will be the normal result of preference. If the agreement has failed to bring about an increase in India's export trade but, on the contrary, has, by reducing the capacity of foreign countries to buy Indian goods directly or indirectly, had the effect of impairing her export trade, it cannot be considered a success. But even this consideration is not a conclusive case against the Agreement of 1932, although it may be a decisive argument against renewing it. For the utility of the Ottawa Agreement has to be judged against the background of the general world conditions. Within the last three years international trade has been hampered by a series of restrictions such as exchange control, quotas, bilateral trade agreements and so on, which, in any case, would have checked the normal flow of exports from India. With the best intentions, India could not remain unaffected by those external factors, even if she had declined to enter into any trade agreements herself.

Obstacles to International Trade

One of the most serious obstacles to the development of free international trade is the action of several countries in concluding bilateral trade agreements with a view to securing a correspondence in the trade between the two countries. The new theory is based not upon the ultimate balance of trade resulting from trade with several countries but upon the idea that each pair of nations must have a correspondence between their exports and imports. This idea has resulted in a number of bilateral trade agreements in Europe. Under the dominance of this new idea, European countries are prompted to reduce their purchases from countries which do not buy much from them, and India having an active balance of trade with most countries of Europe, cannot therefore hope to increase her sale of her commodities in Europe with any chance of success, as long as this motive governs international trade. In these circumstances, with her export trade already greatly reduced on account of the depression, and with the new obstacles to trade facing her in Europe, she may justifiably seek to strengthen her position in the British market with which she has a passive balance. It may, therefore, be argued that, while Ottawa may not represent the goal of her trade policy, it may justify itself as a temporary measure reducing the impact of the world forces of her foreign trade.

India's Trade before and after Ottawa

It will be remembered, India guaranteed under the Ottawa agreement a preference of 10 per cent. on most of the goods coming from the United Kingdom (the chief exceptions being cotton goods and steel which enjoyed the benefit of differential duties) in return for a similar preference on nearly all the important commodities of Indian export. The arrangement was expected to bring very definite benefits to Indian trade. The following table brings out the trade position of India before Ottawa and that after Ottawa.

TABLE I.

NOTE :—The sources for all the tables in this article are the following :—

1. *Statistical Abstract of British India*, 1920-21 to 1929-30.
2. *Review of the Trade of India*, 1930-31 to 1933-34.
3. *Sea-Borne Trade and Navigation of British India* for December, 1934.
4. *Dr. Meek's Report on the working of the Ottawa Scheme of preferences.*

	1913-14	1925-30	1930-31	1931-32	1932-33	1933-34	1934-35 (9 months)
Exports including re-exports)	249	344.5	225.6	160.6	135.6	149.7	112.2
Imports	183	240.3	164.8	126.4	132.6	115.3	96.4
Balance of trade in merchandise	66	104.2	60.8	34.2	3.0	34.4	15.8

The above Table does not warrant any easy optimism. While the fall of exports has been arrested, they have not only diminished to nearly 45 per cent. of the average of 1925-30, but have not shown any increase as compared with the pre-Ottawa year, 1931-32 ; indeed exports and imports have both diminished. What is even more striking is that the active balance of trade, on which India depends so largely for her financial and economic stability, has, after recovering slightly in 1933-34, again fallen deplorably during the nine months of 1934-35.

India cannot afford to have a continuing reduction in her balance of merchandise trade. As has been pointed out by Sir George Schuster, India requires an active balance of 50 crores of Rupees to enable her to liquidate her annual obligations. Since 1930-31 the balance of trade has been going down ; and although the last year showed a slight improvement, the last nine months point to a deterioration. The balance of trade in the nine months of 1933-34 was Rs. 25,9 crores, in the nine months of this year 1934-35 it has been reduced to Rs. 15.8 crores.

It is true that the post-Ottawa year indicates a decided trend pointing to an increased share of Great Britain. Sir George Schuster writing in the *Economist* has drawn pointed attention to the fact that the British market has become very important to India on account of this fact.

TABLE II.

Percentage Share of the United Kingdom in the Sea-Borne Trade of India.

	1913-14	1925-30	1930-31	1931-32	1932-33	1933-34	1934-35 (nine months)
Imports	64.1	46.8	37.2	35.5	36.8	41.3	40.3
Exports	23.4	22.1	23.8	27.9	28.0	32.2	32.7

As may be seen from Table II, the share of Great Britain has increased from 27.8 in 1931-32 to 31.8 per cent. in 1933-34, an increase of 4 per cent., undoubtedly, of considerable significance. It is contended that this fact provides a conclusive test of the great utility of the Ottawa Agreement.

But two or three considerations may be urged by way of qualification. In the first place, the trend, which Sir George Schuster emphasises as being the result of Ottawa, is distinctly a depression-trend, the outcome of the inevitable trade development, when a country like India passes through an extremely difficult period. When, owing to the unprecedented depression, trade is reduced to a minimum, is is natural that the exchange between two countries like England and India, which are linked together in various ways and are two economic regions with very distinct natural advantages, should prove less reducible than between countries not having the same degree of intimate economic and trade relationship. Indeed, when it is remembered that India's trade with Great Britain has always resulted in a heavy passive balance which had to be made up by her active balance in the rest of the world, it is not surprising that during the last four years Great Britain absorbed a comparatively larger percentage of exports from India. There has been a post-war instability in the trade relations between India and England ; and it is even possible that in the future some readjustment takes place of a more permanent character and the big gap between India's imports from Great Britain and her exports to her is reduced.

Secondly, the influence of currency depreciation and the trade relationship between countries in the sterling area must be given their full weight. Amidst the great uncertainties of exchange, Empire countries were able to find an area where they could trade without extreme fluctuations. Naturally this resulted in an increase of trade as between the Empire countries.

Further, the diversion of trade in favour of Great Britain, which has been more pronounced in 1933-34, was only to be expected, considering the special circumstances of the year. It was the period of the Japanese boycott of Indian cotton and our total exports of all kinds to Japan shrank from an average of Rs. 41.4 crores in 1925-30 to Rs. 13.95 crores in 1932-33 and to Rs. 12.61 crores in 1933-34. Japan's share of Indian cotton went down from 55 per cent. in 1932-33 to 40 per cent. in 1933-34. The reduction in the import of Indian cotton by Japan coincided with an increase in Great Britain's import of Indian cotton. Secondly, during the last 2 years the disorganised and restricted market of Europe, which has involved itself in a net-work of bilateral and regional trade agreements, has cut down very seriously the volume and value of India's exports. That the Ottawa Agreements have had the result of indirectly aggravating trade restrictions in Europe has not been seriously denied by any one. Although Japan has lifted the ban on Indian cotton and has been taking very large quantities of cotton from India during the last nine months of the value of 14 1/3 crores of Rupees in nine months of 1934-35 as compared with Rs. 6 crores in the same period last year, European markets are unlikely to afford in the near future any scope for recovery of India's export trade. Hence the percentage share of Great Britain of India's exports, which has increased to 31.8 per cent. in 1933-34, may, in all probability, be kept up until recovery takes place in Europe. Thus despite the increasing share of Japan in recent months, Great Britain's share has not diminished because of the serious decline in our exports to the continent of Europe.

Gold Exports

A factor of transcending importance, which has prevented a rapid diminution of our consumption is the export of gold. The part played by gold export in keeping the import trade from falling and in making up for the deficiency in her balance of merchandise trade can be seen from the following table.

TABLE III.

	1231-32	1932-33	1933-34	1934-35 (9 months)
Exports of merchandise	160.6	135.6	149.7	112.2
Imports	126.4	132.6	115.3	96.4
Balance	34.2	3.0	34.4	15.8
Annual essential obligations	50.0	50.0	50.0	...
	−15.8	−47.0	−15.6	...
Net Exports of Gold ...	58.0	65.5	57.0	38.4

It will be seen from the above that India could not with exports of merchandise at their present level have supported the present volume of imports simultaneously with meeting her external obligations, unless they were supplemented by gold exports. As a matter of fact, both a part of imports and a part of the external obligations have been met by gold exports. Speaking in March, 1933, the Finance Member said : "What is happening now may be put in two different ways, either that part of India's consumable imports is being paid for in

gold, or that gold sales are providing the means to meet external obligations and to accumulate reserves in external currencies. The truth really is that what is happening is a combination of the two processes, for it must be remembered that so far as concerns the individuals who make up the mass of the producers of goods for export and consumers of imported goods they have to pay for the latter with customs duties added, and as customs duties on the 112 crores of rupees worth of goods imported for the ten months of the current year come to 38 crores one may say that the exports to the value of 110 crores of rupees are being supplemented by gold sales in order to pay for goods at the imported value of 150 crores, so that Rs. 40 crores of the gold proceeds have been used to pay for consumable goods." The increase in the export of gold in 1932-33 led to an increase in imports also in that year; but in 1933-34 there was a contraction of demand for cotton goods which occurred alongside of a fall in the value of gold exports. The position is still very critical and inherently unsound. The balance of trade during the last 9 months is more unfavourable than in the corresponding 9 months of the preceding year, and when the gold stream dries up, as it shortly will, India is likely to witness another crisis of serious magnitude.

Benefits to India vs. the rest of the Empire

The scheme of Empire preferences has brought less advantage to India than to other Empire countries in respect of all those commodities which are marketed in England by India and other Empire countries as the following table shows:

TABLE IV.

(*a*) *Coffee.* (Thousand cwts.).

	British India.	Other Empire countries.	Foreign countries	Total
1931-32 ...	46	293	412	751
1932-33 ...	50	279	413	742
1933-34 ...	45	292	336	673

Whereas there is a fall in the imports into Great Britain from foreign countries and also from British India, there is a rise from Empire countries. British India did not improve her position, whereas other Empire countries have profited more from the preference.

(*b*) *Spices.* (Thousand cwts.).

	British India.	Other Empire countries.	Foreign countries.	Total
1931-32 ...	40	146	70	256
1932-33 ...	23	134	35	192
1933-34 ...	25	164	63	252

Here also the advantage is more to the other Empire countries than to British India.

(*c*) *Groundnuts.* (Thousand tons).

	British India.	Other Empire countries.	Foreign countries.	Total
1931-32 ...	81.3	18.5	38.9	138.7
1932-33 ...	57.3	28.0	11.2	96.8
1933-34 ...	69.8	59.6	2.1	131.5

When other Empire countries have increased their share from 28000 tons to nearly 60000 tons British India's share has increased only from 58000 tons to 70000 tons. Though the preference has been of advantage to India, it is clear that other Empire countries have so far benefited from the preference to a greater extent than India.

(*d*) *Pig lead.* (Thousand tons).

	British India.	Other Empire countries.	Foreign countries.	Total
1931-32 ...	49	149	100	299
1932-33 ...	44	185	33	262
1933-34 ...	55	216	11	282

Here also though the foreign countries are rapidly eliminated, other Empire countries have gained more than British India in quantity.

Normally the wide distribution of markets should be reckoned as an advantage; and conversely, excessive reliance on a single market is a disadvantage to countries. India is an example of the former, and New Zealand and Australia of the latter. But the present depression has had the result of reversing the position. Owing to the disorganised and disintegrated state of the continental markets India has suffered a great deal, while Australia, New Zealand and Canada have gained a great deal, because the British market on which they depended is an extremely stable one. These countries have been able to take advantage of the British market because of the nature of the goods which they export, as they rely to a greater extent than India on the export of foodstuffs which have had a comparatively good market throughout the slump especially in Great Britain. But from this it cannot be concluded that excessive dependence upon one market for export is not dangerous for a country; indeed, as the Macmillan Committee pointed out, some of the raw material and food-producing countries depending upon one or two big markets suffered in the initial stages far more than others. All that can be said is that, had India's exports been marked by quality and better finish, instead of, as hitherto, merely cheapness due to low standards of living, she would have been in a better position to avail herself at the present moment of the stable market afforded by Great Britain, which, owing to the increased standard of living (maintained even during the depression by unemployment relief) has kept up the consumption of the more expensive and varied forms of foodstuffs. Not until the nature and methods of production in India alter, can India hope to derive in full the advantages of a trade agreement with a country like Great Britain.

Direction of India's trade in recent years.

It will be interesting to study the direction of India's export trade during the period before Ottawa and that after Ottawa. The following table brings out the important changes that have occurred. And it will be seen that Japan's boycott of Indian cotton was an important cause explaining the increase in the relative share of Great Britain. Another very disquieting feature that is illustrated in this table is the enormous shrinkage in Europe's share of Indian exports. Most of the European countries now have reciprocal arrangements by which countries agree to buy only mutually from each other. Thus Germany now buys raw materials only from those countries which buy her manufactures. Our active balance Germany has, therefore, turned into a passive balance to the value of nearly 2½ crores of rupees within the last 9 months. France and, to a lesser degree, Belgium and Netherlands have reduced their imports from India. The commodities, that have particularly suffered on account of recent changes, are pig lead, oilseeds and hides and skins.

TABLE V.

Direction of Trade
Exports

(Percentage exports to each country of the total exports)

Country	Pre-war. 1913-14.	Pre-depression. 1929-30.	1930-31.	1931-32.	1932-33	1933-34.	1934-35. (9 months)
United Kingdom	23.4	21.8	23.8	28.2	28.0	32.2	32.7
Germany ...	10.6	8.4	6.4	6.3	6.5	6.5	4.4

Total ...	82.0	75.8	71.8	72.9	76.9	77.1	76.3

Trade in individual commodities examined :

The chief items of India's exports are, in the order of their importance: jute and jute manufactures, raw cotton, tea, oil-seeds, grain, metals and ores, leather, raw hides and skins, raw wool, lac, paraffin wax and oil-cakes. These together constitute about 90 per cent. of the exports. In examining the course of trade in regard to these commodities, we have to bear in mind that there are various changes in the side of demand and supply which, as has been pointed out by Dr. Meek, are of far greater importance in determining the world trade in any commodity than a relatively small factor such as preference. For example, a good or bad crop in one of the chief producing centres may cause changes out of all proportion to those caused by such a weak factor as preference ; and recently linseed has provided an outstanding example. Again, as has been pointed out by Prof. Bowley and Mr. Robertson, "figures of consumption and production at home and abroad, even when studied over a series of years may in some cases throw an uncertain light on the effects of any given act of tariff policy even on the fortunes of the commodity immediately concerned, since other causes modifying the general conditions of demand and supply may have been at work ; while such an act may well affect the fortunes of other commodities in ways which general reasoning may suggest, but which it is beyond the power of statistics to verify." These limitations suggest the need for caution in interpreting the movements of trade, but do not render the study entirely valueless.

We may at once dispose of commodities like jute and jute manufactures and lac, in the production of which India enjoys a substantial monopoly, by saying that preference is not of any consequence. Raw jute is on the "free list" ; and in the case of manufactured jute, the United Kingdom has taken somewhat less in 1933-34 than in 1932-33.

Raw cotton. The most important of India's export commodities is raw cotton, but India gets no preference on it. Assurances were given that genuine efforts would be made by Lancashire to use more Indian cotton ; and the results of the last two years indicate a decided improvement in Great Britain's consumption of Indian cotton, which increased from 167,000 bales valued at Rs. 161 lakhs in 1932-33 to 342,000 bales valued at Rs. 327 lakhs in 1933-34. Part of this increase is due, undoubtedly, to the improvement of the price parity in favour of Indian cotton as against the American ; but the desire to use more Indian cotton has also contributed to this result. But as against this improvement, must be set off the withdrawal of Japan from the Indian market due to the imposition of specially high duties in 1933 with disastrous consequences to the cotton grower. Again, it must also be remembered that there is a very definite limit to the expansion of the export of Indian cotton to the United Kingdom, as Lancashire has specialised in finer qualities of goods for which long staple cotton is required. This is the reason why, even in the recent Indo-British Trade Agreement which was a sort of a post-script to the former agreement of 1932, no more than a repetition of the assurances then given has been made. On the one commodity, in which India is vitally interested, Great Britain cannot thus offer any substantial reciprocal advantage.

Tea.—The next important item of export is tea, of which so much was made by the Indian Delegation at Ottawa. No one can deny that the British capitalist is vitally interested in the tea industry in India and that Great Britain could not, without gravely injuring the British capitalists, for whose benefit the various kinds of commercial safeguards are proposed, in the new Constitution penalise tea exports from India. But apart from this consideration, the course of events since the Ottawa Agreement has completely altered the whole case for preferences. The Tea Restriction scheme now adopted by the three major tea-producing countries, India, Ceylon and Java has fixed definite export quotas. The quota fixed for India is 320 million lbs. of tea. Although India gets a preference in Britain, which she shares with Ceylon, Java will have a freer market in other parts of the world, for the Restriction Scheme has brought about a sharing of the world's markets by the chief tea producing countries. Thus the effect of the preference granted to tea has been nullified by a new factor, revealing, incidentally, the exaggerated fears of the sponsors of the Ottawa Agreement regarding this industry.

Oil-seeds.—Among oil-seeds, groundnuts, castor seed and linseed are the most important articles of export. The export of groundnuts in 1933-34 was 547,000 tons as compared with 433,000 tons in 1931-32. But the value realised was less than last year, being Rs. 663 lakhs compared to Rs. 712 lakhs in 1923-33. Although the imports of groundnuts into the United Kingdom increased from 58,000 tons to 70,000 tons, the percentage share of India in the British market actually declined from 60 per cent. to 53 per cent., whereas other Empire countries captured a larger share of the British market. The enormous decline in value, which has particularly affected Madras, from which 83 per cent. of the total quantity was exported, must be traced to the new policy of France, which has been in recent years the most important single market for groundnuts. In August 1933, a decree was passed under which an import duty has been levied on groundnuts other than those grown in the French colonies. This restriction has had a disastrous effect on prices.

Linseed.—A conjunction of circumstances has brought about a great improvement in the export of linseed in 1933-34. Both total exports and exports to the United Kingdom showed very great increases compared to 1931-32 and 1932-33, the quantities being 379,000 tons and 131,000 tons respectively. This result was largely due to the combined effect of the Ottawa preference in the United Kingdom and the relative scarcity of available supplies in international markets. How much this latter factor was responsible for the increase of exports from India can be seen from the fact that while the Indian crop was very nearly the same as in the previous year, the Argentine crop of 1933 was estimated at only 1.4 million tons as compared with 2.2 million tons in 1932. Further, the failure of the linseed crop in the U.S.A. also led to the greater export of Indian linseed to America.

It is almost certain that. when production of linseed becomes normal in Argentine and the U.S.A., Indian export will shrink considerably, although she may be in a position to improve her relative position in the United Kingdom market compared to

Argentine. But the action of the British Government in granting a rebate, based not on value but on weight, to British oil crushers of 15 shillings a ton on linseed used in the crushing of oil has the effect of favouring the consumption of Argentine seed which is a cheaper variety and, therefore, gets actually a larger rebate.

Castor seed.—The export of castor seed declined from 86,000 tons in 1932-33 to 82,000 tons in 1933-34 partly due to the fact that Indian castor seed was slightly out of parity with the Brazilian product. Shipments to France and U.S.A. diminished considerably, while Belgium, which had taken 4,000 tons in 1932-33, practically withdrew from the market, having cut down her demand to 300 tons. The only encouraging feature of the export trade in this commodity was the increased shipments to the United Kingdom which took 27,000 tons as compared with 23,000 tons in 1932-33. But India had always enjoyed a partial monopoly in the United Kingdom market in regard to castor seed, and the preference of 10 per cent. has, undoubtedly, strengthened her already strong position, so that in 1933-34, over 90 per cent. of the consumption of castor seed in the United Kingdom was from India.

Grains.—It is admitted that India derives no advantage from preference to wheat, as there has been very little export surplus during the last two years and as the price of wheat in India has been higher than in the rest of the world.

Rice.—India, excluding Burma, is a rice-importing country ; but including Burma is a very important exporter of rice. There was a recession in export from 1.89 million tons in 1932-33 to 1.74 million tons in 1933-34. The large exportable surplus in Burma, combined with that in Siam and Saigon, led to great uncertainty in prices and finally resulted in very depressed conditions in the rice market. This was aggravated by an entirely new factor of grave importance, which is likely to be of a somewhat permanent character. The deliberate and intensive development of certain tracts which, instead of importing the requirements of rice from outside as before, have now endeavoured to grow the crop themselves, and the series of restrictions on imports by legislation and other measures have caused great injury to the Indian ryot by reducing the value of his crop to low depths. The restriction of imports in Dutch India, which has now switched off from sugar-cane to rice, the import duty on rice levied by the Federated Malay States and by China, the altered position of Japan, which, from being a rice importing country, has become an exporting country and the imposition of tariff on rice by Ceylon, have all had serious reactions on the rice trade of India. Siam and Indo-China began to export rice to India in large quantities with the result the price began to fall rather rapidly.

It is true that there was an increase in export to the United Kingdom and Belgium ; but this was balanced by a corresponding reduction in export to the Netherlands. The price factor is comparatively unimportant in the British market for rice ; and Spanish rice of superior quality and better finish is preferred as recent figures indicate. More attention must be paid to the improvement of quality and better processing, if full advantage is to be taken of the preference granted by United Kingdom. But the important markets for Indian rice are in Asia, where on account of the factors mentioned above, the consumption of Indian rice has been greatly reduced.

Hides and Skins.—The improvement in quantity and value of the exports of hides and skins, raw and tanned, is the result of numerous economic forces, the most important of which is the reaction set up by the depreciation of the American dollar. Preference has had the effect of increasing the share of India in the United Kingdom market both in raw and tanned hides and also in tanned skins, although in respect of raw skins her share fell off from 72 per cent. in 1932 to 70 per cent. in 1933. In the result, there was a drop in the proportion taken by the United Kingdom under the general heading "hides and skins" of all kinds.

It is unnecessary to deal elaborately with other commodities. In the case of pig iron the importance of the Japanese market was brought home to us when she cut down her requirements from 188,000 tons in 1931-32 to 71,000 tons in 1932-33. In 1933-34 exports to Japan resumed nearly the level of 1931-32.

It will be seen from a study of the trade returns relating to specific articles of commerce that, while preference has exercised some influence, other factors on the side of demand and supply have exercised much greater influence. What is most disquieting to-day in the Indian agricultural economy is that the foundation of her economic prosperity in the past, which lay in the production of a variety of products very cheaply by means of cheap agricultural labour, is being threatened by the higher costs of production in India and the reduction of costs of production in the rest of the world. The fundamental problem is not, therefore, to be solved by seeking preferential treatment in a market even of the importance of the British market but by improving and rationalising the methods of agricultural production.

Preference to British goods :

In any study of the working of the Ottawa Agreement attention should be directed not so much to its immediate effects on the export trade of India as to the reactions set up by the preferences which have been granted to British goods. These preferences may have various effects.

(1) *Burden on the Consumer.*

They may throw great burden on the consumer by raising the prices of all preferred goods to the level at which the same kinds of goods coming from non-preferred countries can after paying the higher duty be sold in this country. This will happen to the extent to which the general rate of duty has been raised from the former rates of duty. The method which the Government of India have adopted in granting preference to British goods is to raise the duty on foreign goods by 5 per cent. from the general rate and also to lower the duty on British goods by 5 per cent. from the general rate so as to ensure a 10 per cent. margin of preferences. They have thus sought to reduce the burden on the consumer from what it might be if the general rate had been raised to the full extent of preference and to increase the benefit to the home producer from what it would be if preference had been granted by way wholly of a reduction from the general rate.

(2) *Injury to the home producer.*

This will happen if the general rate of duty is kept at the former level and the duty on commodities coming from the preferred country is lowered. Those indigenous producers who were producing goods subject to the new preferential duty will now find that their protection has been impaired.

(3) *Loss to Revenue.*

This will occur in all cases of preference. The only circumstance, in which preference will not involve any loss of revenue, is either when the preferred country does not export the commodity to the country which grants preference, or when it supplies 100 per cent. of the requirements of the country granting preference. In the former case, since all the supplies come from non-preferred countries no loss to revenue can occur ; while in the latter case, since no part of the supply comes from non-preferred countries, the only effective rate of

import duty is that levied on the preferred country's goods. The whole of what the Consumer pays reaches the Treasury.

(4) *Ultimate reduction in export trade.*

Preferences may, either by provoking retaliation or by reducing the capacity of the non-preferred countries to buy, ultimately result in a net loss of export trade. This will depend upon the nature of the preferences granted as well as upon the economic position of the country that grants preference.

Benefits to Great Britain

The most striking result of the preferences granted to British goods is that the continuous downward trend in British imports, which has been a feature for over 10 years, has been definitely arrested; and from 1932-33 the percentage share of Great Britain in India's import trade is rising. The following statement brings it out clearly.

	1913-14.	1925-26.	1926-27.	1927-28.	1928-29
Share of the United Kingdom. ...	64·1	51·0	47·8	47·7	44·7
	1929-30.	1930-31.	1931-32.	1932-33.	1933-34
Do. ...	42·8	37·2	35·5	36·8	41·3

The substantial advantages secured by the United Kingdom on account of the preferences are clearly revealed in the trade returns for 1933-34 and for the 9 months in 1934-35. There are to be noted increases in the share of the United Kingdom under cotton manufactures, instruments, iron and steel, motor cars, mineral oils, liquors, paper, sugar and hardware. As has been pointed out by Dr. Meek, the extent of the advantages secured by British goods should not be measured merely by the actual increase in the share of the import trade. India has ever been a price market; and her preference for cheap grades must be more marked at a time of depression like the present one. As a result, imports from Great Britain would normally suffer more than the cheaper imports from other countries. But that despite this disadvantage, Great Britain should have been able to increase her share substantially shows the measure of the benefits she has derived from the preferences.

Effects on Price

Owing to the very peculiar circumstances prevalent in the post-War world in which conditions of competition have been thoroughly upset and a state of demoralisation has set in, prices have not gone up despite the increases in the general rates of import duties. Foreign producers have rather sought to fight the British manufacturers by fixing their prices at the old level and incurring a loss rather than leaving the field clear to their British rivals. But even so, they have relatively lost ground in the Indian market.

Effects on Total Trade

The reduction in non-British imports to India from £53 millions in 1931-32 to £43 millions in 1933-34 has, in combination with other disturbing factors in the Continent of Europe, resulted in a serious diminution in our exports. It is this aspect of the matter that has been neglected by many of those who pin their faith in trade agreements. India's dependence upon Europe, Japan and the U.S.A. has been clearly shown by the continued stagnation of her trade. It is not even necessary that foreign countries should deliberately embark upon retaliation for India's foreign trade to suffer. International trade being based upon barter, no country can buy from other countries unless it is able to sell. As the Viceroy rightly pointed out in his address at Calcutta in December last, India's recovery is so bound up with the rest of the world that nothing should be done to hamper the free exchange of goods. Such measures as the Ottawa Agreement can only displace trade from one channel to another and in the long run will only do harm rather than good.

But if it is found necessary to enter into regional agreements on the ground that India cannot afford to stand alone, such regional agreements should be concluded not only with the countries constituting the British Empire but with all those with whom India has been in a position of fairly intimate trade relationship. Japan, for example, affords striking illustration of the utility of a trade agreement for specific ends. Our dependence upon Japan was revealed in a strikingly distressing manner in 1933 when she refused to buy from us cotton and pig iron. Italy offers a good market for our cotton and wool. The case of Germany again points to the need for some understanding, for her imports from India are fast shrinking.

Indiscriminate Preferences

A serious criticism against the Indo-British Trade Agreement of 1932 is the manner in which preferences were granted to all kinds of British goods without regard either to the efficiency of the particular British industries which are intended to be benefited or to the interests of the rising small and medium industries of the country or to those of the consumer. As the Fiscal Commission has rightly pointed out, just as protection should be given only to those industries which have great natural advantages and which eventually can thrive without protection, so also should preference be granted only to those goods, for the production of which the preferred country has special facilities, although it may temporarily be at some disadvantage. Judged by this test, there are only a few industries in Britain that can qualify for preference. Indiscriminate preferences will increase the burden on the consumer and are likely to have serious unfavourable reactions on the general economic life of the country giving preference. Greater discrimination should have been made in the selection of British commodities for preferential treatment.

One of the first things to be done before renewing the Ottawa Agreement is to make a thorough examination of all the small industries like those producing soaps, brushes, buttons, toys, perfumes, boots and shoes, etc., with a view to finding out the effects of the preferences now given to these British imports on their prosperity. Being on 'small-scale' and without ny kind of organisation these industries do not afford the data necessary to judge the effects of the preferences. But judging from the figures of imports of certain selected commodities for the last four years, it may be stated that in many instances Japanese competition is more real and important than that of the British. One reason for this is that the British goods are of a superior quality and do not directly compete with Indian goods as Japanese goods do. But the argument cannot be pressed too far; because in the first place most commodities, even apparently dissimilar, are in reality competitive; and secondly, as has been proved time and again in the case of cotton and steel goods, it is only the margin of difference that matters. Where for one reason or another this margin is reduced, a shift in demand from Indian goods to British goods will take place.

The following table brings out the relative position of Great Britain and Japan in respect of (a) boots and shoes, (b) umbrellas and fittings, (c) earthenware, (d) paints and colours and (e) stationery excluding paper. It will be seen therefrom that, although Japan is increasing her share relatively in boots and shoes and umbrellas, Great Britain's share in earthenware, paints and colours and stationery has increased and she is able to maintain her position in the supply of soaps.

Note.—In the above table, the figures of total represent the total imports from all countries including those for which details have been given.

The broad inference from the above is that, while Britain may not without preference be able to retain the present position in respect of these commodities, the benefits she can possibly derive from preferences on them are out of proportion to the sacrifices that India is called upon to make in her revenues.

It has been pointed out in the preamble to the Supplementary Trade Agreement recently concluded that the nature of competition between India and England is such that differential duties in favour of England and against foreign countries are quite appropriate. This may be regarded as a correct statement of the position, if only the protective aspect is considered. But from the point of view of the consumer, it may be stated with equal validity that the opposite is true. British goods being high priced and of superior quality are consumed by the richer sections of the community who can be taxed more than the poorer sections who consume the cheaper varieties from foreign countries. A differential duty in favour of the more expensive commodities will result in making the tax burden unequal between the rich and the poor. Thus from the distributional aspect of taxation, differential duties in favour of British goods cannot be defended. We have thus to balance such a nice set of factors that the only prudent course will be to limit preferences only to those commodities in which British manufacturers hold already an important part of the market or in which the grant of preference is likely to develop rapidly a British industry as, for instance, the motor car industry.

The need for a careful and continuous examination of the effects of the preferences granted to British goods has become apparent from the memorandum submitted to the Government of India by the aluminium utensils manufacturers in Bengal, which brings to light the absurdity of granting preference to a raw material the supply of which is controlled by a powerful cartel. It is clear that the European cartel, which is a combination of the aluminium producing interests in the United Kingdom, France, Switzerland and Germany is in a position to use its monopolistic power to the detriment of the Indian manufacturers; and although preference has nothing to do directly with the difficulties of the Indian manufacturers, it cannot be denied that the grant of preference to a commodity which is held by a monopolist cannot be justified.

Conclusion

This brief study of the working of the Ottawa Agreement makes it clear that India cannot claim to have derived any considerable advantage from it. On the other hand, the essential difficulty of India remains as it ever was. Our export trade has not recovered yet; India is one of the countries whose share in world exports fell during the period 1929-33. But for the enormous export of gold since 1931, she could not either have discharged her annual external obligations nor have maintained the standard of living even at the present low level.

Indeed, it is futile to expect any substantial results from the Ottawa Agreement. The present plight of India requires a more drastic plan of action. She was caught horoughly unprepared at Ottawa. Her only desire, as voiced by the spokesmen for the Government of India, was the negative one that any Empire agreements should not leave her in a worse position than before.

Wanted a Change in Policy.—The world has changed rapidly since 1931 ; and it is time that the Government of India reconsidered its position in relation to the rest of the world. There are three courses of action which must adopt, if she is not to be thrown back into a more miserable state of poverty. In the first place, she must consider if in the face of the growing restrictions on the freedom of trade and particularly of the levying of import duties on raw materials and foodstuffs, prudence does not demand a reconsideration of her economic policy implying a shift from free international trade to a greater degree of self-sufficiency. She must, therefore, contrive a better balancing between her exports and imports. Her productive resources should be directed to a graeter extent than formerly to production for home consumption for her teeming millions rather than upon production for exchange with the products of other lands.

Secondly, as far as possible, she must retain "the maximum freedom of action in respect of such foreign trade as it is still desired to possess" so as to let fluctuations in various markets and various sources of supply compensate one another. This policy means that she should not lightly conclude any trade agreements without a more fundamental policy and deeper study than has been done so far. But if trade agreements are found to be desirable, she must enter into regional agreements with all those countries with whom her trade relationship is of some degree of intimacy. Otherwise, she is more likely to create prejudice and a sense of injustice than derive any benefit.

Thirdly, her whole methods of agricultural production and marketing must be revolutionised. As has already been pointed out, while mechanisation of agriculture has resulted in the lowering of costs elsewhere, India continues her primitive state of cultivation with disastrous results. The price parities in respect of many commodities have in recent years been against India and have rendered her economic position extremely precarious.

It is to consider such vital problems that a Central Economic Council is urgently required. The Government as at present constituted is thoroughly ill-equipped for the gigantic tasks thrown upon it. We, therefore, need a body of experts who will be able by continuous study of the problem to render valuable advice to Government.

INDIAN TOBACCO INDUSTRY

The hookah habit is immemorial in India and its increasing replacement by biris, cigarettes and cigars has created another of India's new industries. Of these, cigarettes are most largely consumed, totalling about 6,500 millions compared to 1,000 millions ten years ago. Imports of cigarettes have greatly decreased during the last four years in comparison with the early post-war period, while imports of unmanufactured tobacco have progressively risen.

The following statistics indicate the trend of trade :—

	Imports (lbs. in lakhs)			(Value in lakhs) Rs.		
	Cigarettes	Others	Total	Cigarettes	Others	Total
Pre-war average ...	17	15	32	53	18	71
Post-war average	41	22	63	180	43	223
1930-31 ...	31	19	50	122	29	151
1931-32 ...	14	31	45	53	41	94
1932-33 ...	8	52	60	29	68	97
1933-34 ...	6	43	49	19	53	72

The shrinkage in imports of cigarettes is due more to the popular preference of cheap indigenous brands than to trade depression. Local cigarette factories are catering to home consumption, specially in the cheaper qualities manufactured from imported tobacco. Although cigars made in India and Burma still command a good market, they cannot compete with the finer leaf of the imported article, the principal overseas suppliers being the United Kingdom, China and the United States of America, of which the first is by far the biggest contributor. Unmanufactured tobacco comes chiefly from the United States which have increased exports from 1.5 million lbs. in 1930-31 to 4.7 million lbs. in 1932-33, the United Kingdom taking the second place. As in the case of cigarettes, there is a popular preference for Indian-made cigars, notably those from the South which has for many years been engaged in the industry. Biri smoking which ten years ago was a newly acquired fashion among the intelligentsia has lost its popularity with the growing supply of indigenous cigarettes and is now confined to the labour and the lower middle classes.

The following comparative table of the pre-war and the post-war position indicates the import side of the trade—

	Exports in lbs. in lakhs				Exports value in lakhs			
	Raw	Cigars	Others	Total	Raw	Cigars	Others	Total
Pre-war average ...	204	15	4	223	23	13	1	37
Post-war average ...	259	5	10	274	73	6	5	84
1930-31 ...	280	2	9	291	97	3	4	104
1931-32 ...	254	1	7	263	81	1	3	85
1932-33 ...	209	1	6	216	73	1	3	77
1933-34 ...	292	1	6	299	90	1	3	94

Exports of raw tobacco to the principal consuming countries were—

(In million of lbs.)

Year	U. K.	Aden	Netherlands	Japan	Malay Straits	China
1931-32 ...	10.5	4.4	1.0	3.7	2.3	2.9
1932-33 ...	9.0	4.4	1.6	3.1	1.2	0.5
1933-34 ...	13.3	5.4	3.5	3.3	1.7	0.7

The weakness of the Indian industry lies in the poor quality of the country-produced raw tobacco. Efforts to improve the quality began in 1905 when types of plants grown from selected seeds were separated into pure cultures and classified. Pusa No. 28, the best Indian cigarette tobacco, was evolved out of these experiments which have been continued and amplified under the direction of the Imperial Council of Agricultural Research. The Council has decided on establishing a special tobacco sub-station at Guntur in Madras where good tobacco is produced on a commercial scale. Also, a pair of flue-curing barns are to be provided by the Council in the Punjab, Bombay, Bihar, Burma, Bengal, United Provinces, Central Provinces, Hyderabad and Baroda. The research work on Indian tobacco is of recent growth and there is considerable ground to be covered. Experiments and investigations are assisting the development of the industry slowly and the pace must be accelerated if India is to add tobacco to her list of national industries. A Marketting Board looks after the commercial aspect ; but it is the industrial side of tobacco cultivation, curing and mending, that calls for more attention. Though Bengal is the most important tobacco growing province, it has no cigarette or cigar factory. Cigarette smoking is an almost universal habit in India among the middle and upper classes and the potentialities of a well-organised tobacco industry are vast. Madras-made and Burma cigars have a ready market in the Straits Settlements, United Kingdom, Siam and Aden. It should not be impossible to raise Indian-made cigarettes to the same salable level as Indian-made cigars.

INDUSTRIAL DEVELOPMENT IN UNITED PROVINCES

A memorandum of written evidence submitted by the Council of the Merchants' Chamber of the United Provinces in reply to the questionnaire of the United Provinces Industrial Finance Committee deals, *inter alia,* with the question of available local capital for investment in industry. The Council think there are resources, secreted in the various parts of the Province, which are lying idle, because of the absence of the banking habit while the preference of capitalists for Government securities operates against industrial development. It is not very easy to give exact figures of capital investment in the United Provinces as funds flow to Calcutta, Bombay and other centres for gilt-edged. The Committee however, quote the following comparative figures from Income Tax Returns showing Government securities assessed for income tax in 1932-33.

Province			Rs.
Madras	...	...	6,33,65,999
Bombay	...	...	3,79,44,112
Bengal	...	...	10,13,932
United Provinces		...	29,11,330
Punjab	...	...	53,49,843

These figures, states the Memorandum, generally bear out the Council's opinion that, in the event of a Financing Corporation being floated in the United Provinces under official auspices, with Government as a large shareholder, much of the capital lying idle may be directed to industrial investment. Under a Finanacing Corporation Scheme, men of initiative, enterprise and administrative ability, but without capital, would be attracted to an industrial career. But before attracting unproductive capital to industrial development, it is essential, in the opinion of the Council, that there should be a complete re-orientation of the present policy of Government. The Council records in the memorandum its painful impressiou that the local Government are not sufficiently alive to the importance of organising and educating commercial opinion. The gravamen of the Council's complaint lies in the fact that an atmosphere in which a livelier interest can be taken by the public in industrial activity can only be created under conditions produced by the effective re-actions of public life to the successful working of commercial organisations. The local Government, the Memorandum states, do not seem to have fully appreciated the tremendous part which commercial bodies play in industrial development. Capital only will be of no avail without a correct setting, specially in the vital years of industrial spade work.

THE INDIAN CINEMA INDUSTRY

The disabilities under which the infant Indian Cinema Industry is labouring were emphasized at the first All-India Convention of the Motion Picture Society in India which met at Bombay on February 21, with Mr. Jadhar in the Chair. The demands of the industry in the main are—

(*a*) The necessity of reducing the present high level of the import duty on films.

(*b*) The need of assisting the industry, having regard to the heavy cost of production of films.

(*c*) An official organisation to safeguard the interests of the industry from unfair competition.

The abolition or substantial reduction of the import duty on films and film machinery was recommended by the Fiscal Commission in 1921-22 and the Indian Cinematograph Committee of 1927-28. Raw films are not made in India and the duty on imported films has risen from 5 per cent. to 25 per cent. since 1914. The local manufacture of films and accessories is impractical in the absence of necessary scientific and technical training, for which there are no facilities in the country. Technical Institutes do not include cinematography in their curicula and University courses do not provide the specialised scientific knowledge on which the technique of the film industry rests. The film industry is regarded as a key industry in the West and special measures are in operation to maintain the industry on a high level of efficiency. In India no interest is shown by Government except for revenue and censorship. Besides the income tax the Central Government are getting about Rs. 15 lahks from the import duty, which will probably rise by seven or eight lakhs as a result of the recent amendment of the Sea Customs Act. Provincial governments collect amusement and other taxes.

The educational value of film is not utilised by Government except in isolated instances of propaganda or publicity. As recommended by the Indian Cinematograph Committee, a certain percentage of films exhibited should be educative. There are no reliable statistics regarding the industry an omission that should be rectified if the industry is to be organised for the purposes of production, distribution and exhibition. A great deal of popular dissatisfaction has recently been expressed at the demoralising display of a certain type of films, and the Motion Pictures Society in India advocates the introduction of films with high ideals or which would be a powerful agent for mass uplift. India's scenery and her history are admirable material for the development of the film industry, if technical training and capital were available. Without Government assistance these major disabilities cannot be removed. And if the Industry in India suffers from defects of management and organisation the explanation is partly to be found in the indifference of Government to its requirements.

WORLD OF INDIAN FINANCE

Calcutta, Wednesday evening.

Despite gestures calculated and designed to serve as an antidote to monetary stringency, credits have continued firm, with no alteration in the quotable rate and with no appreciable change in market conditions. Interbank call money continued to command 3¼ per cent. to 3½ per cent. Lenders continued as reserved. The squeeze for money remained as acute. A fortnight ago, Intermediate Treasury Bills were discontinued, and the amount on offer on the auction day was reduced from Rs. 1½ crores to Rs. 1 crore. This produced no effect whatsoever. There was, last week, an expansion of currency for Rs. 3 crores against sterling securities transferred from the Home Treasury to the London branch of the Paper Currency Reserve. This left the market equally cold. On Wednesday morning this week, the market knew that Treasury Bills had been altogether suspended. For our part, we did not expect that the Government would take this move. It came to us as a pleasant surprise. This has, however, had no effect on money conditions. It is possible that, sometime next week, there may be a slight relaxation in stringency, due to the inflow of some funds from Treasury Bills Maturities and due to the entire stoppage of the drain in the form of fresh sales of Treasury Bills. But, it seems, from current indications, that, so far as the money market is concerned, neither currency expansion nor the Treasury Bills gestures would prove adequate to correct the extreme squeeze for funds that has prevailed for over two and a half months.

The reason for this is simple enough. Expansion of currency means nothing more than a swelling of the cash balance of the Government with the Imperial Bank. The real problem is how to divert a part of the floods into the financial circles. That problem remains untackled. As for Treasury Bills, there are strong grounds to support the belief that a considerable proportion of Treasury Bills transactions is confined to the Imperial Bank. Cessation of Treasury Bills will, therefore, have the same effect as currency expansion, namely, swelling the cash balance of the Imperial Bank. Had the market held any appreciable share of Treasury Bills, the discontinuance of the weekly sales would certainly have had the desired effect. As it is, the gestures so far vouchsafed by the Government mean nothing tangible to the market; their only significance lies in that herein is an assurance about Government's concern for the acute stringency in the money market and their recognition that something must be done by them to relieve it. They have tried their own remedies. They have not been effective. Is it too much to hope that, in the logical exploration of the other measures suited for the occasion, the Government would soon be undertaking open market purchases of securities? This is the only way, under existing circumstances, of injecting credits into the market.

In this connection, it is interesting to speculate as to the further ways and means operations which the Government will have to carry out in the situation caused by the stoppage of Treasury Bills. Treasury Bills Maturities in the remaniing half of March amount to Rs. 3½ crores. This has to be repaid. Provision will also have to be made for the usual month-early disbursements in April for Rs. 2 crores. The ways and means outstandings with the Imperial Bank were Rs. 2 crores in the return issued last week. Surplus revenue over current expenditure may be expected to yield, say Rs. 2 crores in the closing fortnight of the financial year. There will be, thus, Rs. 3½ crores to be provided for, in addition to the Rs. 2 crores which must be repaid to the Imperial Bank. We wonder whether this amount of Rs. 3½ crores will be made up by further borrowing from the Imperial Bank on ways and means account. In the ordinary course of events, recourse to the Bank can be said to be a suitable alternative. But it must be remembered that, with the close of this financial year, the status of the Imperial Bank in relation to the Government will be altered. It is not the Imperial Bank that can be called upon, as from April 1, to make ways and means advances to the Treasury. It will be the function of the Reserve Bank to provide ways and means loans. In the light of this new status of the Imperial Bank, it stands to reason that, at the close of

the financial year, no amount should be owing by the Government to the Bank, nor is it exactly advisable that the Reserve Bank should inaugurate its career with a ways and means advance to the Government. For all these considerations, we are of the opinion that the best and most seemly course is for the Treasury to refrain from borrowing any sums from the Imperial Bank on ways and means account.

If our suggestion is deemed to be in consonance with scientific canons and with principles of propriety, the course that the Government should pursue is to expand currency for Rs. 5 crores or thereabouts in the remaining days of 1934-35. Considerable bitterness has been caused by the Government's persistence in a deflationary policy. It is this policy which has created and accentuated monetary stringency. Delay in the adoption of remedial measures has made the tackling of stringency specially difficult. Further expansion of currency for Rs. 5 crores, in addition to the Rs. 3 crores expanded last week, would go a long way to soften the critics of Government's currency policy and put heart into the various markets. At the same time, we should again emphasise that expansion of currency, unaccompanied by open market operations, will not be of any avail. The fiscal year is drawing to an end. The Government will be in a position to know, definitely, what amounts remain unutilised in the Debt Redemption Fund. There is every case for using up all the unspent balances for the purchase of securities from the market.

The necessity for such timely and plentiful irrigation of the parched up money market is stressed all the more, when we remember that the list for the Reserve Bank shares is, for all practical purposes, to remain open for seventeen days. While it is true that a considerable proportion of the total applications will be from upcountry subscribers, and that the amounts involved in these applications would not, in large part, represent any drain on the money market proper, there can be no doubt that fairly appreciable sums should find their way from centres like Bombay, Calcutta and Madras into the Reserve Bank shares. The shares are already quoted at Rs. 42 premium. This gives a measure of the heavy oversubscription that is in store. The general estimate is that applications will be for at least four times the amount on offer. If so, the withdrawal of funds from money market centres must be on the large side, even after allowing for the fact that mofussil applications will cause most pressure on Postal Savings Banks accounts. It must also be added that, due to the enormous labour involved in the collecting together of the applications from the seven hundred receiving offices, classifying them, drawing lots from amongst them etc., it should take at least a month or more before the balances on unallotted applications are returned. In other words, application monies for anything like Rs. 20 crores may come to be held up in Reserve Bank shares. The Government must keep a careful watch over the money market situation in this regard. If developments proceed on the lines we apprehend, they should be ready to release funds to the market by some means or other. Otherwise, the squeeze a'ready severe might become so acute as to cause a crisis in most markets. In view of the peculiar position as regards ways and means advances at a time when the Imperial Bank will have an altered status, and in view of the pressure that will be caused by applications for Reserve Bank shares, we urge a strong plea that there should be, immediately, a generous expansion of currency and that a good part of the currency so created should be generously and effectively used for easing the monetary stringency.

An exchange banker was more bitter than ever about current week's market conditions. There has been no market at all, he snapped. It is as dead as can be. There are practically no bills. The tap-rate for the purchase of sterling has been reduced by the Government from 1s. 6 5/32d., to 1s. 6 1/8d. Applications were received today for £220,000 at 1s. 6 1/8d., and allotted in full.

The closing rates are: 1s. 6 3/32d., March T. T.; 1s. 6 1/16d., April T. T.; 1s. 6 1/32d., May-June T. T.; and 1s. 6d., Monsoon months T. T.

Bills may be quoted: 1s. 6 3/16d., March; 1s. 6 5/32d., April; 1s. 6 1/8d., May and possibly June; and 1s. 6 3/32d., July-August.

Money has been tight, the quotable rate for call money being from 3¼ per cent. to 3½ per cent. Firms' money for call and three days' notice quoted 1 per cent. Onemonth and twomonth deposits 1¼ per cent.; threemonth deposits 1½ per cent. Sixmonth and twelvemonth deposits 1½ per cent. and 2 per cent. respectively.

BANKS:

It is a mistake to think of a Bank as an institution which exists merely for the purpose of taking care of depositors' money and paying it out on their instructions. Whilst it is true that this is the primary business of a Bank, it forms only a part of the duties which Lloyds Bank is prepared to perform for its customers. It is not possible in a short space to enumerate the many facilities the Bank offers, but its Branch Managers are prepared to consider, or, if they are not themselves in a position to advise, to obtain expert opinion upon any question affecting their customers' finances, investments, income tax, Trusteeships, Executorships, etc.

Wednesday evening.

The decline in sterling which occurred during the last week and the week before, has, for the present, been stayed. The sterling-dollar rate improved from 4.74⅜ on the day following. Similarly, the sterling-franc rate regained on March 8, a great deal of the ground it had lost during the preceding four or five days and was quoted 71.65. But during the two days following, the sterling-dollar rate has declined to 4.77⅜ while the sterling-franc rate has improved to 71.7-1. This shows that the recovery of sterling as against the dollar has been more difficult than the recovery as against the franc. Such a statement can be ventured on the strength of the trend of rates during the last one week. But one can find some suport for the view in the intrinsic position of the three currencies concerned and in the attitude of the authorities of the varous countries to the position of the exchanges. It is well-known that Mr. Neville Chamberlain, the British Chancellor of the Exchequer, has always held that the pound has been undervalued in relation to the franc and overvalued in relation to the dollar. This by itself would seem to suggest that normally sterling would find it hard to regain whatever it looses against the dollar; and the position would naturally be quite the opposite in relation to the franc.

From the very fact of the overvaluation of the pound in relation to dollar and its undervaluation in relation to the franc, it follows that sterling should find it more difficlt to regain the lost ground as against the dollar than as against the franc. This positon should be considered quite apart from the general weakness of sterling resulting from an unsatisfactory state of the British balance of payments. It is evident from the airmail papers that the view is widely held in London that in the first week of the steep decline in sterling there was little or no bear speculation. There were, no doubt, some who held that the decline was caused by the speculative operations of Continentals who believed that sterling was on the downward trend and tried to reap some profits out of operations based on that belief. But it has been pointed out that such bear speculation in sterling must lead to a discount on the forward exchange. And as a mater of fact, there was, during the week, an actual premium on forward sterling, and one could only conclude therefrom that the decline in sterling was the result of its weak position. *The Financial News* takes the view that the heavy depreciaton of the dollar to far below its natural parity is as one of the prime causes. It also emphasises the importance of the strength of the Budget and national credit, the solidarity of the sterling bloc and the fact that the Government has shown that it will not countenance any device which could legitimately be called inflationary." Nevertheless, there is a weakness in sterling which could not be adequately accounted for either by the political troubles or the repercussions of the pepper-shellac affair, which has been grossly exaggerated and distorted on the Continent, or even to the less reassuring trends of the Budget. "The causes," *The Financial News* suggests, "must be sought in the fact that the initial influence of tariffs upon trade balance quickly spent its force ; in the continued depletion of the costs and prices of the gold bloc; in the policy of the Minister of Agriculture ; and in the crippling of the international credit machinery by fresh foreign tariffs, quotas or embargoes." The most important fact, however, is that despite the general protection afforded by tariffs, many of Britain's leading export industries are still unable to make any appreciable headway in overseas markets.

It is obvious that sterling can gain strength only when the British export industries have regained a substantial part of their lost markets. To the extent that this hope is forlorn, it may be said that sterling cannot maintain itself. The abandonment of the gold standard in 1931 was, no doubt, a readjustment of the relative position of sterling and the foreign currencies. The policy of import quotas and tariffs instituted by the National Government is an effort to readjust the balance of payments position. But it would appear that this paramount task of restoring the equilibrium has been accomplished only partially. We referred last week to the adverse balance of payments in 1934 and expressed the opinion that the adverse balance was not substantially large to bring about this decline by itself. It is learned that in spite of the embargo on foreign lending, which the Chancellor of the Exchequer has rigorously maintained all these years, Britain had indulged in overlending which naturally has the effect of accentuating the adverse balance of payments.

The events of the last fortnight are an unexpected confirmation of the wisdom of the policy of the Chancellor of the Exchequer. It will be seen that the embargo on foreign lending cannot be pressed for, except on the ground that the resumption of free lending will lead to an expansion of British exports to a greater extent than the amounts involved on such foreign loans. Whatever the future policy of the British Government may be, it is certain that at the present moment the position of sterling is not reassuring. We have for our part, taken a bearish view of sterling from a long time ahead, and to the readers of these columns the developments of the last fortnight cannot have come as a surprise.

The weakness of sterling may be seen to be more pronounced when it is remembered that the decline has occurred in the face of active efforts on the part of the American Equalisation Fund to prevent an appreciation of the dollar. London opinion is positive that during this period the authorities on the other side of the Atlantic had been endeavouring to keep sterling high. But it would appear that the American Control has no effective means of preventing the appreciation of the dollar. The measures that are to hand are of a generally self-defeating nature. The position of the British Control is also weak. Even if it had wished to prevent a decline in sterling, it lacked the means of attaining its object. In fact, it is the general recognition of the low resources of the British Control that has created widespread pessimism in regard to the prospects of sterling. With the British Equalisation Fund run down and the American Control lacking the means of preventing an appreciation in sterling, and with bear speculation more or less totally absent, sterling may well be said to be finding its level.

In the long view a recovery of sterling can come about either through a rise in the level of prices in America or through the onset of weakness in the Continental gold currencies. It is by now certain that the Bank of France has rendered the new monetary policy of M. Flandin more or less innocuous. In our overseas columns this week reference is made to the final agreement that has been arrived at between the Government and the Bnak of France as to the terms on which the latter will extend its credit to banks and the public on Treasury Bills. It will be found that the terms are

FINANCE MEMBER AND ECONOMIC PLANNING.

A debate on economic planning bids fair to become a hardy annual in the proceedings of the Legislative Assembly. Mr. F. E. James, who made a demand for economic planning last year, has returned to it again and has in some respects amplified the idea which he propounded a year ago. The term, "economic planning", of late evokes such a chorus of approval that Mr. James had naturally the whole Assembly on his side. It is, of course, too much to expect that there will be the same degree of unanimity in regard to the measures which any scheme of planned economy ought to comprise. Mr. B. Das, who made one of the more notable speeches on Mr. James's cut motion, treated it as an opportunity for airing more general grievances and even those which are not strictly germane to the question of planned economy. One of the European members, who spoke in support of Mr. James's motion, mentioned specifically that the Government should consider sympathetically the case of every industry which comes forward with a practical scheme of self-regulation. This is, perhaps, a reference to the Government's treatment of the scheme of restriction which the coal industry forwarded to them for their approval and support. Ideas of economic planning are generally formed by each trading or industrial interest from its own particular standpoint and those who are not directly interested in industry or trade, have their pet economic fads to put forward. Dr. Zia-ud-din protested against tariffs of astronomical figures; and there were others who insisted that, when economists are appointed, they should be chosen from among Indian professors and not imported from England. The spokesman of the Government will naturally find himself in a difficult position when answering the demand for planned economy, as he can have no definite idea of the exact scheme which its supporters have in their minds. But if the Government are opposed to the idea as a whole, it would be the easiest thing to criticise the proposals mentioned by each speaker and resume one's seat with the idea that the whole case for economic planning has been smashed. Sir James Grigg has trodden the easier path of meeting the particular points raised by a promise of considering them and turning down the demand for planned economy.

* * *

The reply of Sir James Grigg to the debate on Economic planning raises, both in its tone and content, many important questions. There is, in the first place, an air of dictatorial finality in Sir James's answers, which is, to say the least of it, strange in any one member of the Viceroy's Council. While we are glad to see that Sir James's utterances are free from periphrasis or equivocation, we should deprecate the attitude which assumes that public policy should be in full agreement with personal predilictions. Sir James Grigg has been advertising his devotion to the cult of free trade; and it is even said, that he counts himself among one of the two or three genuine free traders still left in the world. As our correspondent for South India remarked in his last week's letter, while Sir James is certainly welcome to hold his own opinion on fiscal policy, he is certainly not entitled to apply all his ideas to the fiscal system in India. There is no manner of popular sanction or even sanction from higher constituted authority for the reversal of our fiscal policy. It smacks of political dictatorship that Sir James should regard his personal scepticism as a very weighty reason against economic planning.

* * *

The reasons, which Sir James adduced against Mr. F. E. James's plea for planned economy, are, in fact, no more substantial. Sir James said that, wherever there are five economists, there are six opinions; that a permanent Tariff Board or a council of economists would blunt the edge of responsibility of the executive; and that the experience of other countries did not induce him to change his opinions. It is difficult to believe that these arguments were advanced in all seriousness. To suggest that differences of opinion among economists are an argument against economic planning shows that Sir James was not clear in his mind either about the function of an economist of the evolution of public policy. It is a commonplace of the columns of *Indian Finance* that the economist as such can have nothing to say about the purposes which schemes of economic planning are generally designed to secure. The demand for planning comes of the intolerable insecurity of economic conditions; and those who put forward such a demand are generally prepared to sacrifice other objects for such stability. In formulating policy towards these ends, difference of objectives is inevitable; and economists, too, have their unconscious preferences. But these differences are no conclusive proof either of the soundness of the conclusions of economists or the value of economic planning. To accuse economists of inconsistency is natural and common in an utter layman. But in the Finance Member of the Government of India it can be due only to ignorance or opportunism.

* * *

We maintain that, however efficient economists may be in their profession, the evolution of practical policy will always be for the Government and the Legislature. When people demand a system of planned economy they may be supposed to say in effect: "We are not prepared for these violent vicissitudes of economic fortunes. To the Government it matters little, for there is the surcharge ready to hand. To us it is a matter of life and death. Anything to spare us the agony of these cyclic movements!" It is not for any one member of Government to insist that these fluctuations shall continue for ever and ever.

* * *

The Government's efforts ought to be directed to more constructive purposes. With all our anxiety that there shall be some plan in the Government's policy, we recognise that there are some dangers against which Government and the Legislature ought to be on their guard. In the first place, planned economy tends to create exaggerated hopes in the minds of every section. Businessmen believe that it is a talisman against losses. The unemployed look

to it as a source of perennial and bountiful employment. Each industry regards it as a scheme designed to protect its market from competition of all kinds and from all sources. And hardly any section has even a rough measure of the difficulties in the way either of a theoretical or a practical character. The Government might justly try to disabuse people's minds of these exaggerated hopes and restore to enthusiasts a sense of realism.

* * *

It is in this context that the experiences of foreign countries are highly relevent. And quite contrary to the opinion of Sir James Grigg, we hold that every country, which has tried economic planning seriously and wholeheartedly, has had a balance of advantage sufficient to encourage others to follow their example. Those, who like Sir James try to scoff the idea of economic planning, have their eyes only on the problems that such countries have before them for solution. It is impossible in the nature of things, that any policy of economic planning could solve all the problems or would not give rise to new problems. The criterion to be applied is not whether the Administration has a comfortable time, but whether the country could have made any progress in the absence of such planning or whether it is not conceivable that there would have been further regress, if the authorities had followed a policy of let alone. It is not a little significant that in those countries, where planning has ben tried, differences of opinion exist, not in regard to the wisdom of planning, but only in regard to specific measures which have been adopted or which are proposed.

* * *

A more detailed consideration of this question is not possible except in reference to each country. It may be said at the outset that it is difficult to single out the countries which have followed a policy of economic planing. No government is altogether indifferent to the state or the progress of the national economy. Equally, no government has been able to command full faith in a policy of *laissez-faire*. If there are differences between one country and another in the matter of economic planning, it is a difference of degree and not kind. Nevertheless, one may leave out of account a country like France, where the Government held till recently that all that was needed to pull the country out of the depression was to restore the equilibrium of external and internal prices by a policy of deflation of credit. This faith in deflation as an effective, though severe, cure of the economic malaise has dwindled since the turn of the year; and M. Flandin at any rate, may well be regarded as the latest convert to the cult of economic planing. The beginnings of a New Deal have been already made in France; but as the attempt is too recent, we have no specific experience which can be relevent to our purpose.

* * *

The majority of nations have followed a policy, rather than a plan. But such policies have been nearer planning than *laissez faire*, inasmuch as the most common expression of such policy is the trade pact, whether of a bi-lateral or a multi-lateral kind. In these countries, too, there is no significant departure from the past; and most of the trade pacts are mere expedients dictated by anxiety regarding the stability of a foreign market for some national staple or other. Great Britain, is the most outstanding example of such a policy; and in her case, this sort of planning was necessitated by currency, rather than the wider economic, considerations. But there is no doubt in Britain that, however inadequate these measures may have been, the position might have been easily worse but for them.

* * *

The case for economic planning must, however, stand or fall by the results in countries which have avowedly followed economic planning. And these countries are, surely, Italy, Germany and the United States, in the order both of chronology and of importance. We shall not try to detail the achievements of economic planning in each country, for the simple reason that what is more important at this stage is the problems which economic planning has created in those countries. In Italy, there is hardly any embarassment for the Duce except those arising from his fanatical devotion to the present parity of the lira. Under the ægis of Economic Fascism, Italy has reconstructed her internal economy and strengthened herself in the export markets. Marshlands have been reclaimed for cultivation. The dependence of the country on foreign sources for its supplies of foodstuffs has been overcome. In the export markets, Italian goods are able to offer strenuous competition in spite of the overvaluation of the currency. There can be no doubt that, if only Signor Mussolini could overcome his compunctions in regard to devaluation, there would be little room for detracting the policy followed by the Government except the political objections against Fascism, which, we grant, are by no means inconsiderable.

* * *

As for Germany, the achievements of the Nazis in the economic sphere during the years in which they have been in power, were recounted sometime ago in the Overseas Section of *Indian Finance*. And Dr. Paul Einzig adverted to the same subject a fortnight back in discussing the monetary policy of Germany. It is significant that, while Dr. Einzig was ready to denounce the German policy for its apparent lack of scruples, he was prepared to grant its efficiency and efficacy to the national economy. We doubt if

would have been, if the authorities had affected the airs of high brow individualism. Germany has, no doubt, her problems. But they are the result of the state of world trade and of the impediments which each nation is heedlessly interposing in the way of its growth.

* * *

The case of the United States is even more clear. It was the fashion among British politicians till very recently to contend that Great Britain had achieved far more of recovery with her cautious conservatism than America with her Roosevelt Revolution. But opinion in Britain has changed of late. And the interest, which is evinced in Mr. Lloyd George's New Deal is a significant flattery to the American President. If one is to judge the value of economic planning from the results in America, one ought to distinguish clearly between the measures which are designed to cure the maladjustment in the economic machinery and the measures with which Mr. Roosevelt seeks to bring about a different order of society. It is characteristic of Mr. Roosevelt's courage that he has introduced both these sets of measures at the same time, though he could have easily foreseen that the complications created by the latter kind would be used to discredit the whole scheme of the New Deal. For our part, we do believe that Mr. Roosevelt could have had a far bigger achievement, if he had delayed the schemes of reform till the scheme of reconstruction was well under way. But Mr. Roosevelt could not overlook the fact that reform would have but poor chances, once big business is on its feet again. It must be clear, however, that most of the problems of Mr. Roosevelt are such as the President could have easily helped and that they cannot, or rather should not, hide the fact that the New Deal has pulled American economy from the depths of the depression and put it again on the highroad to prosperity.

* * *

The major problem of American economy is the attitude to foreign trade. A large import surplus is clearly necessitated by America's position as a creditor nation. The sharp change from the position of a debtor to a creditor country requires a readjustment of fiscal policy which America cannot effect, except at the risk of serious unsettlement in the internal economy. At present public opinion in America is not ready to choose between the only two alternative courses open to her, of either letting in the imports or acquiescing in repudiation of the debts owed to her. The question of foreign debts, the question of foreign trade and the structure of internal economy are clearly bound together. So long as America does not make a choice on this crucial question, complications are bound to continue. But there can be no question that within the limits in which Mr. Roosevelt could plan, he has planned wisely and to great effect.

* * *

The results of economic planning can by no means be said to be against experiments in that direction. In the case of India, such planning is necessary, not so much because of the trade depression, as because in the past there had been the utmost indifference to the real interests of the nation. India had little of the benefits of free trade. Her fiscal policy was shaped to suit the requirements of the ruling nation; and protection was not given even within the limits permitted by orthodox priciples of free trade. The nation was not allowed to reduce substantially its extreme dependence on agriculture. When the need for industrialisation was recognised, the requisite faculties and facilities were found to be woefully lacking; and the policy of protection was followed in the most half-hearted manner. Deflections from this policy have been none too few. And in the last two years, the government have blown hot and cold in rapid alternations. The Emergency Budget granted to all industries and sundry, a virtual protection of 25 per cent. And under cover of these revenue duties, new

industries have grown up. And with reckless unconcern to their welfare, the Government have indulged in fits of free trade fervour, as, for instance, in the case of the duties on raw skins and hides. We have thus a chaos of administrative actions which much healtheir economies than that of India cannot stand.

* * *

But it is not the position of industry, so much as the position of agriculture that makes planning so urgent. Indian agriculture had stood up wonderfully to the tremendous strain imposed on it. With the cultivators steeped in debt, with a high percentage of the population depending on it directly for sustenance and the rest indirectly, with primitive methods of cultivation, with little or none of scientific marketing, with the balance of payments resting on the export of agricultural staples, it is, indeed, a wonder that there was no crisis in the past and an even tenor of economic life was maintained. But this weak position was further weakened by the depression. Even before it, some of our foreign markets had begun to aim at self-sufficiency. In others, our commodities had to face more efficient foreign competition. The depression was the last straw, crippling, as it did, purchasing power both at home and abroad. Prices fell far below the level of costs ; and the whole structure of internal economy was disorganised. The problems of Indian agriculture to-day cannot be solved by the application of the principles of free trade. We have to take account of the fact that foreign markets have undergone a very serious contraction. We have to remember that the internal demand has to be expanded and that such expansion can be effected only through the increase of purchasing power by the increase in manufacturing activity. This suggests the question whether export of agricultural raw material is at all necessary, whether it cannot leave place to export of manfuactured or semi-manufactured articles. It may even be possible to reduce the dependence in foreign markets for our goods.

* * *

Whatever the shape these policies may take in the future, there is no doubt that present problems cannot be tackled in a piecemeal way. There can be no intelligent or effective policy, if each economic question is to be decided in its so-called merits. One has to have in mind some definite picture of Indian economy as it should be after a period, some clear ideas as to the inter-relations of the various parts thereof, if one is to do any good at all in this country. It is easy to talk of the interests of the consumer when a demand for protection or a demand for the regulation of the internal affairs of industry is made. The consumer is an abstraction dear to the hearts of free traders. But no nation is divided into two warring camps of producers and consumers. What is required is adequate production, well-distributed employment and avoidance of inequalities in standards of living. That would show a fair distribution ; and against wise attempts to attain such conditions this talk of consumer and producer lacks all meaning. When India demands planned economy, she does so with a keen sense of the misfits of her national economic machinery, not out of a habit of imitating foreign countries. Sir James might recognise that, if even all other efforts at Planned Economy have proved failures, the chances of India evolving a wise plan are not ruled out thereby. The danger of any economic plan is neglect of balance and the propensity to excessive interference with the working of the natural laws of economics. When Sir James turns down the demand with lofty contempt, he overlooks the fact that economic plan need not necessarily be a violent interference with economic laws. Nor is it a violent break from the methods and principles of economic individualism or a walk over to Socialism or National Socialism. An economic plan might well help the smooth working of economic laws by providing a better balance of forces of supply and demand, of better bargaining power between buyer and seller, of a rational distribution of productive activity and the like. The most ardent supporter of *laissez faire* free trade may, conceivably, formulate a plan without violence to his principles. And it is to be hoped that Sir James will prove himself capable of overcoming personal predelictions and co-operating with the Assembly in evolving a wise plan of economic reconstruction.

THE MAILED DOVE

Talks of disarmament proceed, as a rule, in an atmosphere filled with "bitter voices prophesying war"; and there is a singular contrast at home. Close on the heels of the Anglo-French conversations, that raised the hopes of an international concord, came the army budgets of the major Powers ; and they all reveal the same hectic haste for getting ready for war. Optimists still believe that it will be possible to procure Germany's co-operation for an international agreement such as was discussed during the Anglo-French London talks. If and when Herr Hitler recovers from his strategic cold and has an audience with Sir Simon, it will be known whether Germany has suddenly developed pacifist propensities.

In the meantime, the budgets of the different countries provide for greater and greater expenditure on defence. One would imagine from a perusal of England's Army Budget that a peaceful and somnolent country has suddenly awakened to the fact that it is completely defenceless and almost at the mercy of any Power that may choose to invade her coast or to bomb her out of the map from the air. If so, it were a grievous fault and grievously may England be made to answer it. But is it so ? Is it the intention of Great Britain to contend as a serious proposition that, while other countries have ceaselessly endeavoured to strengthen their defences, she has been lazing at home in the complacent belief that the world would turn pacifist and eschew war as a result of their

oratorical efforts at Geneva ? There may be degrees of war-mindedness ; and England may, perhaps, plead less guilty than other nations in that respect. But to assume the role of a peaceful country being forced, against its natural instinct, to arm, because other nations are speeding up their defences, is, to put it mildly, only a half-truth. It is more than likely, it is certain, that all the Powers plead the same excuse in extenuation of their martial activities.

* * *

No one seriously contends that Great Britain should allow her defences to fall below the safety line. But between divergences of opinion regarding the exact location of the safety line there is always ample scope to give militarist ambition free play. What disgusts the laymen is that Britain should talk of disarmament and peace while she takes full advantage of the scope thus afforded and that Hitler should develop a timely catarrh, when the time arrives, to lay his cards on the table. Diplomacy may sometimes suggest the wisdom of not calling a spade a spade ; but it is neither ethics nor policy to mistake Mars for an angel of peace.

* * *

The recent debate in the House of Commons on the Government's defence policy was conducted in the same stifling atmosphere of vague innuendoes and insincere platitudes. Mr. Baldwin's defence of the Government's policy on the ground of the rapid advance in the defences of other nations is, perhaps, sound statesmanship. But it is a useless and almost transparent diplomacy to plead at the same time that Britain was still consumed with a desire to see the different nations clustering in love and amity under the protective wings of the League of Nations. It is also significant that this year the debate centred round the general defence policy of the Government and not, as in other years, on estimates of the individual services. A resurrection of peace through the agency of of the still-born League of Nations is no more possible to-day than it was in the beginning. Peace, in the sense of a positive spirit of amity, is dead ; only in the sense of absence of war is it possible in the world to-day. And it is perfectly true that a more equitable balance of power and armaments would be more likely to ensure peace in this latter sense. Security, in this sense, is not a nation's chief enemy ; and Mr. Baldwin is perfectly entitled to call for more arms and ammunition, if he feels that England is not perfectly safe. He should only refrain from insisting that England is still the apostle of peace that she declared herself to be. It is, indeed, a queer paradox that England's factories are belching forth engines of destruction and her politicians prattling about peace and disarmaments at one and the same time.

THE LEADER.

"Eavesdropper" writes:

C. Y. Chintamani is the *Leader ;* and the *Leader* is C. Y. Chintamani. Both have the same angularities, like earnestness of purpose, and similar esteem from a large following. Moderates are not exactly *persona grata* with the populace ; it is a common experience that they come in mostly for gibes and taunts. But the *Leader* has maintained, and, in fact, improved its body of readers who are fervently devoted to it. And Mr. C Y. Chintamani is the one Liberal whose sincerity everyone in the opposite camp would readily concede; his friends and admirers are legion; and he has never lost one. Of all provincial papers in India, the *Leader* alone can claim that the entire political consciousness of its province was due to its educative influence and propaganda. The United Provinces is under an eternal debt to the *Leader* and Mr. Chintamani. What is the source and fountain of this unique achievement ? The *Leader* is Mr. Chintamani's foolhardy experiment that has gloriously succeeded. It is the very foolhardiness of the experiment which brought out the best in the Editor. It was started with "more moral than material assets". And it is the moral fervour that has been the golden bond between the editor and his readers.

* * *

The *Leader*, at the end of a quarter century, is well-established; it has what is modern in plant and machinery; it has a stupendous pile of buildings for office and quarters for staff; a whole locality of Allahabad is known as Leader Street. The Leader is printed, as the announcement at the foot of the last page indicates, at the Leader Press, in the Leader Buildings, in the Leader Street. By material standards, this reveals surpassing prosperity for the *Leader*. But Mr. C. Y. Chintamani, who founded an institution and aroused political thought and aspiration in a province, has, perhaps, hardly enough savings to retire from active work and enjoy his well-earned rest. As I have said elsewhere, poverty is the badge of honest journalists. But is there any wealth that can give happiness comparable to what, for twentyfive years, Mr. Chintamani has felt, each day of his life, as the day's copy of his beloved *Leader* was placed in his hands ? I can well appreciate what thrill, what pride and what happiness this building up of the *Leader* must have given to Mr. Chintamani. *Indian Finance*, too, was a rash experiment that, God be thanked, looks like succeeding. It was started with nothing of material assets—and with only moral assets. And as, on each Saturday, the copy of *Indian Finance* is placed in my hands, I am the happiest man in India. A work which gives you this supreme happiness once a week is its own recompense. With Mr. Chintamani, lucky man!, it has been, daily, an occasion for this rich and unsurpassable recompense.

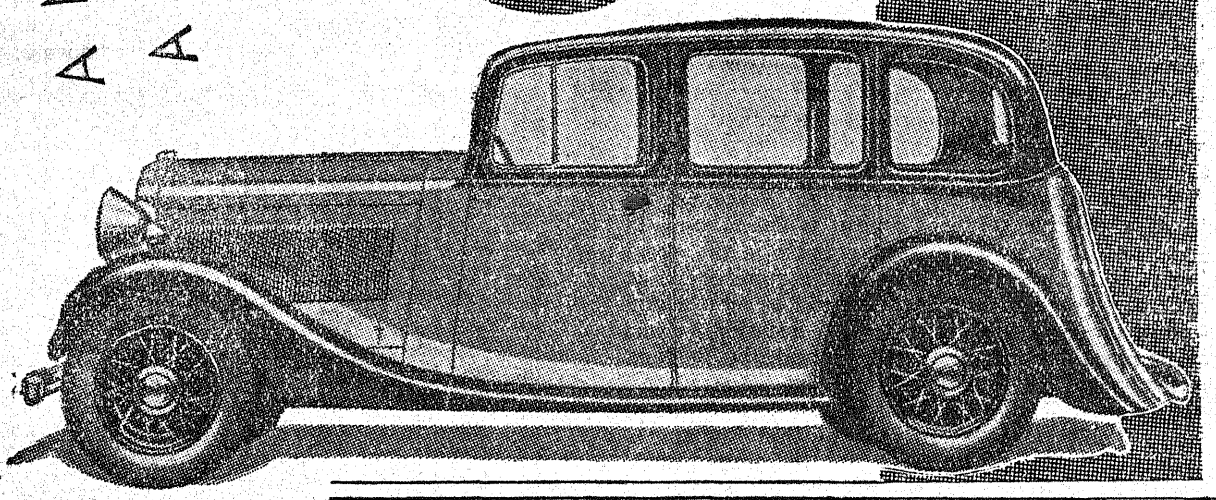
SOMETHING ENTIRELY NEW



WOLSELEY

A CAR WHICH CREATES THE DESIRE TO DRIVE

This new Wolseley "Eighteen" will draw devotees from 12 h. p. to 25 h. p. motorists who see their highest demands realised in the new car. It is a car with an appeal quite outside its actual horse-power, because it is a joy to drive—fast, wonderful acceleration, 4-speed gearbox with synchromesh and freewheel, a clutchless gearchange of the simplest type, new lines in keeping with its performance, draught-free front windows, controlled ventilation—in fact all the features you asked us for when you replied so generously to our questionnaire. We present you here with the car you wanted, built in the Wolseley tradition. Try it!

INDUSTRIAL INVESTMENT TRUST

At the annual meeting of the Industrial Investment Trust, Sir Kikabhai Premchand, its Chairman, struck an optimistic note about the future. He comments that "there are good omens that recovery is returning and trade and industry are steadily but surely reviving." Viewing the future thus, he is satisfied that 1935 will prove more propitious than 1934 and that the coming years will witness as high a level of production and average prosperity as in the pre-depression days. As we have often stated, we, for our part, are not exactly pessimistic. We agree that there has been improvement, though such improvement is exactly patchy and only sectional. Government finances show a marvellous change. Selected industries like cement, sugar, steel, jute, and cotton in upcountry parts are witnessing favourable conditions. But the fundamental problem of India is rural economy. So far as the mass of the population is concerned, there has been hardly any alleviation of the acute and universal distress that has been prevalent for over three years. However, those in the cities are likely to be carried away by the signs of better trade that are visible in stock exchange activity, just as the Government delude themselves that everything is alright as their own finances seem to have got out of the mess into which they had fallen only three years ago.

* * *

So far as the fortunes of the Industrial Investment Trust are concerned, the prosperity of the stock exchanges has more significance than the general well-being of Rural India. Sir Kikabhai is, therefore, justified in taking an optimistic view of the future in so far as every security included in the portfolio of the trust has shown remarkable appreciation in value over the past few months. We congratulate the Industrial Investment Trust on the judgment and acumen shown in the selection of stocks and shares. As Sir Kikabhai reminds his share-holders, the Trust was floated at a time, when finance and industry were just emerging from the depths of depression ; the Directors have, therefore, been able to invest the funds on securities at prices very near rockbottom. The share-holders of the Industrial Investment Trust are not only fortunate in being co-partners in a well-balanced assortment of 110 securities but in having these securities standing in the books at prices considerably lower than current rates.

RELIEF FOR RICE ?

As we go to press, we have the report that Sir Joseph Bhore has introduced in the Assembly a Tariff Amendment Bill reducing the wheat import duty from Rs. 2 to Re. 1-8 and imposing a duty of As. 12 per maund on imports of broken rice of foreign origin. The two changes will be effected by way of amendments to the Tariff Act as the existing Tariffs are consolidated under the Indian Tariff Act of September last. The reason behind this action is quite obvious. As the Statement of Objects and reasons shows, Indian wheat is still out of parity with world prices. In fact, Indian wheat has had a closed market, since the imposition of the import duty. But, while the internal market has been secure for the indigenous product, it has also been shut out from foreign markets. The Government apparently hold the view that it is time that India renews her bid for a place in the world markets ; and for this purpose, they propose to reduce the import duty by As. 8. It is also proposed to restore the former equality in the levels of duties on wheat and wheat flour. It is a question whether the stage has arrived when India can try to develop an export market for her wheat and whether the attempt is not fraught with the danger of insecurity even in the home market.

Even more controversial is the question of the amount of protection accorded to the rice growers. That it grieviously falls short of the demands of the rice growers in South India, there can be no doubt. Siamese rice has been for the last one year and more a horrid nightmare for the South with a harrowing reality about it. The agriculturists could have been much better off if the Government of India had shown more independence and pressed the question to the higher authorities, who, there can be no doubt, had been delaying the imposition of the duty out of deference to French interests. The Government in this country have always been guilty of delay and stinginess in granting protection to indigenous economic interests. And the case of rice growers in the South is about the worst.

* * *

We are glad to learn that the Congress party will oppose the measure and endeavour both to raise the level of the duty and to remove its restriction to broken rice. Though it is generally admitted that the imported rice is of a low grade broken type, there is no reason why the duty should be restricted to it. It is by no means inconceivable that on the enactment of the bill in its present form the exporters from Siam will devise means of evading the letter of the law. South India has suffered too long from these hated imports for Government not to expose her any longer to this danger. If ever there was a case of imports on which prohibitive duties would be justifiable, it is Siamese rice. South India has all along asked for prohibitive duties. Even in the case of discriminating protection, we have often felt that the delicate structure of fair selling price and equalising duties is often disturbed by the tactics of the foreign competitor and must not be too rigorously adhered to. In this case, Siamese rice has been a threat to all classes of the population. The theory that broken rice is the food of the poorest and, therefore, should not be taxed cannot hold water, so long as the average cultivator in this predominently agricultural country is a grower of rice both for his own domestic consumption and for marketing. It is to be hoped that the Government will not present a stiff opposition to the demands of the Congress party and will see their way to accede to the request for a far higher level of duties on all imports of rice of foreign origin.

There is general disliking of the man who is cunningly circumlocutory and diplomatically meandering. Most of us profess that we have no use for him who describes a spade as an instrument used for agricultural purposes and that we fall straightaway for one who calls a spade a d-d spade. There is much virtue in directness, even in curtness. But a nation trained in the tradition of courtesy bordering on courtliness is apt to misunderstand bluntness for incivility and frankness for lack of consideration of the other point of view. Sir Basil Blackett did many good things and one or two bad things. But his good was interred and his evil has lived after him, for the simple reason that he could not take pains to clothe his thoughts in language that impressed the particular psychology of his hearers. An old saying lays it down that even truth can be harsh and offensive ; and that truth must be expressed in pleasant terms. Sir George Schuster understood this principle ; and never could he be caught administering his bitter pills without a liberal sugar-coating. And he was so popular that, for two months prior to his desparture, he was feted all over the place, each noon, each evening and each night. Sir James Grigg does not, as all can now know, believe in the sugar-coating business. He goes back to the Blackett style and vigour. As I said, there is much virtue in this ; but is this the virtue that is particularly appreciated in India?

At the time of the Assembly discussions on the Steel Protection Bill, Sir James is said to have stated, in private talks, that he was one of the three Free Traders left in the world—his master Mr. (now Lord) Snowden, and Sir Walter Layton being the other two. I am not sure if this incident as I have heard it is only a story. But Sir James has, otherwise, left us in no doubt as to his tariff beliefs. And I may, in my turn, tell him a few blunt truths. If he was so fervent, so honest and so convinced a believer in Free Trade, he must have had the courage and candour to tell the Secretary of State, when the Indian Finance Membership was offered to him, that he was a Free Trader ; that India was committed to Protection ; and that the job in India could not, therefore, suit him. To oblige Sir James, India could not and, let me add, will not, depart from the policy of discriminating protection. And it will not do for him to tinker with tariffs in a way that will expose Indian industry, once again, to the blast of cut throat foreign competition. I am afraid, such tinkering is in prospect. The country will do well to rouse itself to a proper sensing of this danger and to see to it that, by back-door means or by subtle wangling of tariffs, the pet fads of Finance Ministers are not introduced to the detriment of a well-defined and universally-accepted policy and plan.

Criticism of the present scale of customs duties comes from differing quarters. Mr. Manu Subedar, as President of the Indian Merchants Chamber, launched a vigorous attack on the tariff system and there was no epithet he spared, in describing the ill-shapen and uncouth plan. The European Group in the Assembly stands for tariff revision. Sir James Grigg gave us a clue to his own ideas in the matter by his caustic description in the Assembly discussion on the Taxation policy—a discussion which was initiated by Dr. Zia-ud-din. Now, what Manu asks for is quite a different thing from what Sir Leslie Hudson and his colleagues ask for and from what Sir James has in mind. Manu demands a scientific study of the tariff system and its re-planning in a way that will be conducive to India's national economy. Sir Leslie would so modify it as to confer advantages on Empire Trade. Sir James would view the problem from the standpoint of his conviction that all tariffs are obstacles to trade and must be drastically modified. Where there is no competition as between a British industry and an established or developing Indian industry, I would certainly be only too ready so to plan tariffs that the British industry has a preference in Indian markets. But a concession like this is apt to be taken undue advantage of, as unduly heavy preferences for British industry are being extracted in the case of steel and cotton textiles. Lancashire is vehemently agitating for removal of the surcharge though it is well-known that the Indian cotton industry has rarely received any benefit worth mention from the so-called protection legislation of last year. In the case of steel, even the revenue duties were sought to be abolished as against British steel. Yes, we are prepared to agree to Imperial Preference on economic (though not on political) grounds ; but let the true interests of Indian industry receive due recognition. Imperial Preference is acceptable when it satisfies the same criterion as the one which Mahatma Gandhi laid down for safeguards, namely, that it should be demonstrably in the interests of India. If it is also in the interests of Britain, none would be happier than we.

Mr. H. P. Mody smelt a rat in all this talk about tariff revision. Certain industries have grown, he argued, under the protection afforded by revenue duties ; and care must be taken, he warned, that their prospects are not adversely affected by the changed duties. Sir James Grigg was sarcastic over Mr. Mody's observation and shed a few crocodile tears for the consumer. These tears have already been anticipated by Mr. Gavin Jones who, speaking the other day in Cawnpore, has proved conclusively that protection in India has, in the generality of cases, imposed no penalty

on the consumers. Domestic production has been vastly stimulated ; and internal competition has become so great as to result in the fullest guarding of the consumers' interests. Protection has not meant the prevalence of prices out of parity with world prices. On the other hand, instances on instances can be adduced in which, where foreign manufacturers had or have a monopoly in the Indian market, they have formed a ring among themselves and kept up prices at artificially high levels.

There are other points, too, in the reply of Sir James to the cut motion of Mr. F. E. James, which should occasion concern. While congratulating Mr. James on a most masterly and most lucid exposition of his case, may I utilise the occasion to impress on the Congress Group and on the Indian commercial community that the time has arrived when they, like the European legislators in the Assembly, should equip themselves with a competent Secretariat attached to the party. Every speech of Sir Leslie or his colleagues shows the care with which information is culled, the thoroughness with which facts, figures and statistics are sifted, and the deliberation which marks the planning of the whole case. In the result, whether one agrees with Sir Leslie or not, everyone must concede that whenever he or his friends speak in the Assembly, it is a weighty, authoritative and well-informed contribution. As things are today, Mr. S. Satyamurthi is so painstaking and so knowledgeable that he furnishes a kind of honorary secretariat to the congress party. So far as Indian commerce is concerned, Mr. Mathradas Vissanji has, I understood, secured the assistance of Mr. K. T. Shah ; and, in such circumstances, his facts and arguments may be relied on for weight and authority. But what is wanted is a permanent secretariat which will ensure constant study of all relevant problems, collection of a complete reference library and continuity of policy and deliberation.

I understand that the Federated Chambers are contemplating the appointment of a Secretary to be posted in Delhi and Simla and to be in touch with the Government and the legislators on questions which affect trade and industry. The sooner this is done, the better. And any amount of money spent on this objective will prove a fruitful investment. On the congress side, there should be no delay in the equipping of an efficient Secretariat. The political policy may be left to the leaders ; the task of the Secretary and his staff should be to maintain an up-to-date intelligence department. We want more and deeper study in this country. The leaders are far too busy ; there is, therefore, all the greater need for the proper type of Secretariat.

To return to Mr. James' speech. He made out, as he did last year on a similar occasion, a number of interesting points:—

1. The existing tariff system should be fully investigated with the object of securing greater uniformity in rates and a larger free list of articles which are necessary for the internal economy of India.

2. The composition and functions of the Tariff Board should be modified.

3. Planned effort in the economic sphere.

4. Redistribution of the portfolios of the Viceroy's Executive Council, specially the formation of a Ministry of Communications, bringing together railways, roads, civil aviation, and posts and telegraphs under one head and a portfolio of Commerce and Industries or Trade.

5. The appointment of a small staff of economic experts and the creation of an economic advisory council.

6. Perodic economic conferences with the provinces.

7. Action to be taken on some of the recommendations of the Bowley-Robertson Report.

It will be seen that most of the issues raised by Mr. James are in the nature of pet fads of *Indian Finance*. I must, however, add that the aims and objects which we have in view in urging these reforms are not, in all cases, the same as those of Mr. James. I have already explained the difference in our points of view on the question of tariffs. As for the Tariff Board, we want its members to have a status analogous to the High Court Judges. It should not be necessary for them to bask in the sunshine of the favour of the

Commerce Department. Their independence and integrity of outlook must be guaranteed by their conditions of service and work. We have urged planned economy because the policy of drift has brought about a situation in which the comfort of the Government as seen in their smooth ways and means position is the reflex of the discomfort of the population which accounts for the emission of distress gold. Sir John Anderson has made a beginning in Bengal ; but we need bigger, more comprehensive, more thoroughgoing and more completely worked-out schemes in every section of national economy and in every provincial or territorial area. The existing machinery of the Government is ill-suited because the problems that now await solution are altogether new and demand to be tackled in ways other than those beloved of the bureaucrats. That is why we need a staff of economic experts. Improved economic statistics are essential if planned action is the objective. This, in simple terms, is the summary of the agitation we have carried on for over five years. And what does Sir James think of it all?

He is altogether scornful of economists. "Wherever there are five economists, there are six opinions". In the case of India, he adds, there will be sixty opinions. This contempt for economists may appear to betoken the superiority complex. To me, it is sheer philistinism. I shall content myself with saying that an ounce of Keynes is worth a ton of Grigg. Nor will Sir James explore the possibility of taking action on Robertson-Bowley report. For, he fears, this will mean a miniature "brain trust". Sir James has enough trust in himself and enough brain for himself. Happy the man who is so supremely satisfied with what he is, what he has and what he does! He is, however, willing to advance a counter-proposal. He will rather follow the United Kingdom example and appoint an economic adviser to the Government of India who would work through the existing Government machinery and would enjoy the inalienable right of civil servants to express opinion. In simple terms, Sir James will be prepared to appoint, in advance, the Financial Adviser of the Viceroy in the new constitution. Thus is every suggestion twisted to suit the deep-laid plots of the Government!

When one comes to think of it, Sir James Grigg has, methinks, a dual side—the one which pleases, the other which causes disquietude. As one who takes quick decisions and initiates swift action, he has proved a Finance Member of proper worth and mettle. His loan plannings, his budget speech, his choice of Reserve Bank personnel—all these showed him to be a man of correct judgment and wise decision. Whenever he launches on a discussion of abstract theories or principles, he is not equally happy, nor his views equally acceptable. His observations on gold exports were too dogmatic and altogether at variance with the entire body of Indian opinion. He was too snappy and categorical on the ratio question at a time when the ratio of his own country is tossed about in an angry sea of exchange squabbles. His contempt for economists is beneath contempt. His Free Trade fads are inappropriate in the country he has chosen to serve. Sir James knows what he knows. Good. He must also know what he has yet to know. This will be better. If he does not, it will be a tragedy both for the Finance Member and for the country whose financial destiny is entrusted to him for a quinquennium.

Mr. Amal Home's address to the Rotary Club on Journalism is marked by choice thought and chaste phrase. It is replete with many a home truth and many a home thrust. There is, he complains, far too much of politics in the creation and planning and conducting of newspapers in India. Second, the journalistic ventures are too much of family concerns. Third, the emoluments offered are a pittance and the tenure is precarious. Fourth, the journals cannot work up circulation for sundry reasons, nor can they build a good-sized advertisement revenue because Indian industrialists are few in number and foreign advertisers look upon advertisements more as patronage than as business. Fifth and last, though we have made good progress, the final achievement is nothing to shout about. All of which allegations are, in the main, true. Poverty is the badge of an honest journalist here or elsewhere ; and what between designing proprietors and dictatorial advertisers, the race of honest journalists is nearing extinction. Only the hireling type has any chance of survival ; but it does not follow that his badge is any other than poverty. It is the saddest commentary on us that the two greatest moulders of thought—the schoolmaster and the journalist—are in the sorriest plight. The one instructs and guides our young mind ; and the other instructs and influences our adult mind. How do we reward our teachers? Scurvy is the human race! That is the moral and lesson Amal Home draws. And everyone who has drudged in journalist or pedagogy will concur in this distressful and humiliating conclusion.

OLD COURT HOUSE CORNER CALCUTTA

THE GATEWAY OF INDIA

(FROM OUR CORRESPONDENT)

Bombay, Thursday, March 7.

The Editor's behest for an earlier submission of my report due to this week being shorter by two working days on account of Mohamedan holidays limits the scope of my topics this week. I have in fact to dispose of practically 3½ working days which cannot in the normal state of things be very eventful in Bombay.

Bombay is beginning to plan regarding rural uplift. It has been decided to hold a series of conferences in Bombay and Poona, to formulate a plan of campaign and the best manner of utilising the grant of Rs. 6½ lakhs which has just been announced by the Government of India. Rural upl'ft is a subject on which there are as many shades of opinion as there are men expressing them. The conferences therefore, are likely to be hampered by a surfeit of proposals. One hopes however, that one or two outstanding proposals will eventually evolve from the discussions and be agreed upon. One such proposal may be the necessity of linking up the villages by roads to the main roads. Such improvements in the means of communications would naturally play a large part in the development of villages in the future. A rather novel and Western proposal is outlined by Mr. Duncan Smith for dissemination through the use of grammophone records. This will no doubt make the otherwise dry efforts of the reformers interesting to the village folk. It is also possible that the line of the scheme of medical relief brought into operation in 13 centres in the Sholapur District, with the help of the Government grant of Rs. 7,500, may be extended. There is according to this scheme a medical man with minor degrees assisted by a nurse at each centre. The poultry industry of the province may also be reorganised and a presidency wide scheme adopted. The Conference will also consider schemes for renovating the village *Chavadis* or meeting places in order to turn them into useful centres of village life. One can only hope that something useful and constructive will emerge from all these novel and ingeneous proposals.

A familiar figure in the textile industry in Bombay will soon be missing. Mr. H. H. Lakins, of the Firm of Messrs. W. H. Brady & Co., Bombay, is shortly going home on retirement after 35 year's association with the textile industry in India. He has designed and equipped a large number of mills and factories in Bombay and was on the Board of Directors of several joint-stock concerns and industrial undertakings of Brady's. He has been an active member of the Millowner's Association of Bombay and was twice elected Deputy Chairman.

Turning to the activities of the Bombay Conference of Local Bodies, some important resolutions were passed at its Sunday sitting in the Bombay Municipal Hall under the presidency of Mr. Hussanally M. Rahimtoola, the Mayor of Bombay. One of the resolutions passed expressed the opinion that no person ought to be disqualified from employment or from continuing on the employment of the service of local bodies on the ground of his having taken part in political movements. The resolution added "the Conference advices all local bodies not to adopt or support the proposed rule on the subject which recently has been circulated by the Government." The question of the abolition of the tolls and of the unification of motor taxation was also discussed. And a resolution was passed requesting the Government to drop the Bill altogether "at this stage and to circulate it for eliciting opinion specially of the local bodies." This lends weight to the contention that the proposal of the Government regarding the motor vehicles taxation was not universally popular. Another resolution calling for the discontinuance of the system of nomination of local bodies and expressing the opinion that the time had come to revise primary education, including the Primary Education Act, so as to make it universal and suitable to the people was also passed. *Apropos* the village uplift scheme mentioned in the previous paragraph, the Conference by another resolution asked the district local bodies to appoint special punchayat officers to organise and supervise the punchayats. Government are also requested to give grants to the Boards to meet at least two-thirds of the cost. These village punchayats, it was urged, could be utilised for the work of village uplift instead of entrusting the work to any outside agency. If all or any of these resolutions results ultimately in corresponding legislation by the Government the Bombay the Conference of the local bodies will have amply justified its existence.

The observations of Sir Amberson Martin, the late Chief Justice of the Bombay High Court, made before the East India Association with regard to the establishment of the Supreme Court for India will be readily endorsed by a wide section of popular opinion. The establishment of such a Court, it is urged, would provide India with an adequate and self-contained judicial machinery. The White Paper also supported that contention and recommended that the Federal Legislature should be empowered to establish the Supreme Court to hear appeals from the provincial High Courts, both in criminal cases and civil cases involving a capital sentence. It was to have in fact taken the place of the Privy Council, though it was also provided that in special cases an appeal would lie to His Majesty in Council. The Joint Parliamentary Committee, for reasons which are most obscure and unconvincing, have turned down this proposal of a Court of Criminal Appeal. The Government of India Bill which follows faithfully the recommendations of the Joint Committee makes no provision for the establishment of either a Supreme Court or a Court of Criminal Appeal. Sir Amberson Martin remarks "The Bill misses the opportunity to found a body of dignity and importance which would appeal to Indian sentiments and imagination." A Federal Court with a wide jurisdiction is a poor substitute for the Supreme Court visualised. It is not quite clear why the sponsors of the Joint Select Committee Report should be so afraid of the possibility of overlapping and conflicting jurisdictions in the event of a Supreme Court of Criminal Appeal being established. On the contrary, one can easily raise several objections against the practicability of a Federal Court with its unwieldy size. It is a pity that after such repeated expression of popular as well as official dislike of the provisions of the Bill, the Government should still pursue this unpopular measure with the dogged obstinacy of a species of the canine order for which the island is famous.

A few weeks ago, I had occasion to remark that the Presidency was in the grip of an unprecedented cold wave that caused considerable damage to crops and cattle, as well as several fatalities amongst the population. Nature which is almost a quick change artist in the East has already shifted the scene and Bombay is now in the grip of a heat wave which has also beaten previous records. The temperature on Sunday reached the record figure of 100.7. The only other stations in India, besides Bombay, which have already recorded temperatures above 100 are the desert stations in Sind and Gujerat. A feature of the present heat wave is the dryness of the atmosphere caused, it is said, by a hot land wave resulting in parched throats and cracked lips.

The incorrigible optimists see in this heatwave possibilities of a brisk trade on the part of the liquor vendors. An iced beer does not of course take the heatwave off, but serves for a brief space to slake the parched throat.

THE TIMES
TRADE & ENGINEERING

A Complete Paper for the Business Man

THE primary purpose of TRADE AND ENGINEERING is to demonstrate the progress of British industry ; it devotes special attention to research, the development of new industries, and the changing conditions under which trade is now carried on. All this is, of course, of great importance to firms dealing with British houses.

The review is of particular interest to the reader abroad, notably for the following regular features :—

THE NEWS LETTERS

from trade correspondents in foreign countries keep the reader in touch with the development of financial and commercial conditions in other parts of the world. Full use is made of the unique services of *The Times*.

TRADE WITHIN THE BRITISH EMPIRE

is covered in dispatches from the main centres of the British Empire which are of importance to all merchants and exporters.

Much practical information concerning the

PROGRESS OF INDUSTRIES

is given by special correspondents in close touch with conditions in the principal manufacturing trades in Great Britain.

MARKET MOVEMENTS

are shown by brief reports and charts recording the average prices ruling for various commodities in the principal markets of Great Britain.

ENGINEERING AND SHIPBUILDING

contains reports of the work at the various shipyards and latest news from the "heavy trades" centres. The aircraft industry and the principal forms of transport are also dealt with.

FINANCE AND INDUSTRY

Banking Notes, Exchanges, and a summary of British Company reports form a most valuable record for reference purposes.

In addition to a number of articles upon new phases of trade and industry there is each month a special illustrated section in which the activities of particular industries or industrial areas are reviewed.

SOUTH INDIA

UNEMPLOYMENT RELIEF

(From our Correspondent)

Madras, March 11.

For once, after nearly a month, there are somewhat heartening developments to narrate in this weekly review. The period following the introduction of the Budget is rarely one in which the Government are in a position to make any pleasant announcements of policy. For, while the Council is in the stage of general discussion or voting the demands for grants, Government have the uncomfortable feeling of being all the time on their defensive, and it is not till the Treasury Benches have gone through the ordeal of questions and cut motions that one can expect any material for these columns from the communiques of the Government. But this year would seem to be an exception. Not only have the preoccupations of the Budget failed to stand in the way, but one might say that the announcements of the scheme of unemployment relief works and the beginning of the Mettur Hydro-Electric Scheme have been made precisely because the local council has the Finance Bill before it, and the necessary grants and appropriations have to be made by the Council in time.

There is, obviously, no underrating the importance of the two schemes. The one promises immediate relief however small, of unemployment. The other takes the historic Mettur Works to a more advanced stage, in which it is both an irrigation and a Hydro-Electric project in one. Those, who know anything about the Mettur Project, know that it is not merely a scheme of storing waters with a colossal dam and regulating the water supply for the fields for seasonal cultivation, but it is also intended to be the source of electric power to be supplied to the adjacent districts. What is important is that we are to have relief at the same time both from the near and the long view. In these days, when one ought to be thankful for small mercies, this is not only a mercy but a big one, too.

It is not clear from the Government Communique on the subject whether the scheme of unemployment relief in the villages comes under the one announced by Sir James Grigg in the Central Budget and whether on that account the amount needed will be augmented by the dole which the Central Exchequer has held out to the provinces. In as much as it is clear from the Communique that the vote of the Legislative Council is required for a further grant of 14.37 lakhs to this purpose, it must be presumed that the sinews of this skirmish against unemployment are to be derived from the provincial coffers.

When one speaks of unemployment relief one begins to think of the schemes of Nazi Germany or of the New Deal in the United States under the aegis of Roosevelt. As against the thousands of millions of dollars involved in the Rooseveltian effort to cure unemployment, we have here a pittance of 14.37 lakhs for a country much more populous than United States and in which unemployment is not a question of technical maladjustment of the economic machinery. Nevertheless, the Government deserve the thanks of the people for this evidence of their solicitude for the people.

In formulating this scheme, the Government have shown the utmost caution in the sense that they have shown the great deference to orthodox principles of finance. They have admitted only such schemes as satisfy the following conditions. In the first place, the scheme should be such that the expenditure thereon can be reasonably debited to capital account. Secondly, they should not impose a recurring liability. Thirdly, it should be possible to finance them from balances and from loan funds. And lastly, they must prove of direct benefit to the rural population. The Government have decided that all these conditions are satisfied by a scheme of improvements to the irrigation tanks in the Presidency. After consultation with the Board of Revenue and the Chief Engineer for Irrigation, the Government have decided that the best course is to adopt an accelerated programme of minor irrigation works in the charge of the Revenue Department and of minor works in the charge of the Public Works Department in a three or four year plan. The actual jobs contemplated are strengthening the bunds and execution of other parts of irrigation works. It is even hoped that as a result of such expenditure, the charges on ordinary maintenance would be considerably reduced in the coming years. When bunds are strengthened the earthwork necessary would mean the clearance of silt. An expenditure of Rs. 150 lakhs is provided for the whole period of the programme. The Government of India have been approached for relaxing the rules to the extent of allowing this expenditure to be debited to capital. On the receipt of the Central Government's sanction, the Provincial Government propose to move a demand for further grant to include a provision of Rs. 14.37 lakhs in the Budget Estimate for 1935-36, as according to the tentative proposals received from the Board of Revenue, a sum of Rs. 12.37 lakhs for works and Rs. 2 lakhs for establishment will be required for expenditure in the several districts during the next year, while for 1936-37 and 1937-38, the expenditure on works will be Rs. 14.88 lakhs and 16.75 lakhs respectively and that on establishment Rs. 2 lakhs in each year.

One obvious criticism is that this amount will be a drop in the ocean of the unemployed. But, as I have hinted earlier, it is not as unemployment relief that it should be primarily judged. No one who knows the state of tanks and bunds in the agricultural areas will underrate the urgency of repairs ; and whatever the Revenue and Irrigation Departments may do by way of repair will shower benefits on the people out of all proportion to the outlay.

The other important announcement is as regards the Hydro-Electric project at Mettur. At the time this subject was dealt with in these columns, it was pointed out that provision had been made in the dam for the Hydro-Electric installation by constructing in the dam the necessary pipes and gates at a cost of Rs. 10.80 lakhs. The idea was that, when the Hydro-Electric installation is completed, part of the area served by the Pykara project would be switched over to the Mettur scheme and the energy in the Pykara project released for new areas. The transmission systems which are now under Pykara and which are proposed for transfer to the Mettur system, are the Mettur-Salem-Erode line, Erode-Trichinopoly line and Trichinopoly-Negapatam line. The Pykara power, that will be set free by the transfer of these areas, is proposed to be extended later on from Coimbatore to Madura. The present scheme provides for the construction of a power house with four generating units a little below the dam and a transmission line system which will serve the districts of Salem, North Arcot, Chittur, South Arcot, Trichinopoly and Tanjore and which may eventually be extended to Madras and its vicinity in combination with the Thermal Station to be established later on at Madras and Tanjore according to load conditions. The scheme is based on a minimum of 1,000 cusecs at a head of 80 feet for generation of power. The minimum discharge of a thousand cusecs is also allowed for in the rules for the regulation of the issue of water from the dam. The only difficulty that need be apprehended is that when the irrigation under the Mettur dam is developed to its full extent, it may not be possible to maintain the necessary head for a portion of the irrigation season in the years in which either there is a late rainfall or a shortage of it. The authors of the scheme are confident that it would also be possible to make up any temporary shortage of power at Mettur as the Mettur Hydro-Electric system will be linked with the Pykara and as the Mukurti reservoir in the Nilgiri Hills now constructed will provide a reserve power for the Pykara system. The capital outlay on the scheme is estimated at

SPEED

The Cauvery River at Trichinopoly is nearly 1½ times as wide as the Hooghly at Howrah Bridge.

Braithwaites bridged the river and opened the line to traffic in six months.

This feat was made possible by the Braithwaite organisation backed by their patented system by which they finished the foundations in five weeks. Seven other similar bridges having an aggregate length of two miles were completed by the same methods in 13 months of continuous work.

Special for *"INDIAN FINANCE"*

London, March 5.

Violent fluctuations in the international value of the £1, accompanied by a rise in the price of gold, which has established new high records only to break them seven times during the past ten days, have dominated markets during the past week.

The fall in the £1 gives every indication of continuing at the moment of writing, though the Bank of England authorities, who have been standing aside to let the foreign exchange markets take their course, have now, I understand, decided to intervene to some extent, not to try and alter the downward tendency, but to check the most violent of the fluctuations.

It may be recalled that three weeks ago I stated that the Treasury and the Bank of England had agreed that, although the Exchange Equalisation Fund should operate to even out the most violent fluctuations, no action should be taken to prevent a long term decline in the £1's foreign value in view of the adverse balance of Britain's international payments.

This policy, of which I was then able to inform your readers is now being carried out. It marks in some respects a break with previous policy, which has been to keep the £1 pegged to the franc fairly closely and will, undoubtedly, come as a severe disappointment to M. Flandin and M. Laval, following, as it does, so closely upon their attempt to persuade the British Government to agree to a new stabilisation pact.

Undoubtedly, the fall in the £1 is worrying the French Government, for, although they have persistently declared that they would on no consideration devalue the franc, I now have it on good authority from Paris that French Treasury's experts have been instructed to draw up a survey of the possible effects on the French financial and economic situation of devaluation to various levels.

Certainly, if the £1 continues its present fall, devaluation will become a much more burning political question in France than formerly.

In so far as Britain itself is concerned, I have during the past week discussed the fall in the £1 with bankers, leading members of the Stock Exchange, industrialists, and politicians. I find no anxiety on the part of any of them as to the £1's course. They consider it highly probable that its fall will continue, but do not expect that fall to have any substantial impression on internal cost of living or upon investment confidence.

A number of issuing houses and brokers, who have now capital issues on hand, have been asked by their bankers whether, in view of the disturbance in the foreign exchange market, they would like to postpone those issues. They have in each case replied that they see no reason to do so, as they do not believe that the average investor is in the slightest extent perturbed. I believe this to be a sound view and see no reason why anybody should hold off investment because of the present exchange fluctuations.

By the time this article is published, the House of Commons will have debated the circumstances of the pepper gamble, and that debate, according to my information, is likely to raise issues which will make it impossible for a public enquiry to be avoided.

Although there has lately been a tendency to suggest that no enquiry was necessary, I am convinced, from my own examination of the position and from evidence, which I have collected, but which I cannot at the moment publish, that, not only is such an enquiry desirable, but that it may well produce results which may truly be described by that overworked term "sensational." There seems to me much more likelihood of a shock to investors' confidence here than in the foreign exchange position.

Meanwhile, in order to look after the commodity itself, fresh efforts are being made to try and obtain a pepper restriction scheme on the lines of the tin and rubber restriction schemes. The Dutch East India Government has now ordered an investigation into the new pepper crop, in view of the large stocks of pepper overhanging the market ; and it is considered possible that, when the results of that investigation are known, a restriction scheme will be agreed upon, at any rate for a period.

Turning to the industrial situation, although annual reports for 1934 still continue to show improved results—the English Electric Co. which has had a long succession of losses at last shows a profit for this year, for instance I find that amongst business men and industrialists generally a reduction of optimism.

Professional economists such as Sir William Beveridge are also inclined to take a slightly depressed view of the outlook.

And it is, I think, significant in this connection that the Government, which after at first giving the Lloyd George recovery proposals a better reception than was anticipated, only to change its mind and turn them down flatly a little later, has now again changed its mind and offered to examine his detailed scheme with the greatest care.

This new change of attitude comes, I believe, from the fact that the Government's investigations of the trading and economic outlook have convinced them that there is no likelihood of a substantial continuation of recovery though the activities of private enterprise alone. The Government are therefore more ready to consider state intervention in public works on the Lloyd George lines.

In view of an increase in the estimated expenditure, the Budget outlook also is not so bright as was at one time expected ; and although the Chancellor is most anxious to reduce income tax again this year, it is not by any means so likely now that he will be able to do so.

Altogether, I do not expect stable conditions either in Stock Markets or industry for some time yet ; and I should most strongly advise anyone, who is buying securities, to have particular consideration for their intrinsic value and only to buy securities which they are prepared to hold even if a crisis of confidence, for one reason or another, brings substantial fluctuations in values.

THE STERLING SCARE

POLITICAL FACTOR IN FOREIGN SELLING.

GOVERNMENT'S ATTITUDE.

BY PAUL EINZIG

Special for *"INDIAN FINANCE"*

Developments in the foreign exchange market during the past week or so have reduced to insignificance the pepper and shellac crisis, the drop in gilt-edged securities and the failure of the new French monetary policy. The weakness of sterling, which became accentuated into a panicky fall towards the end of last week, caused immense excitement in financial centres all over the world. London banks are bombarded with enquiries from the Continent and from New York as to what they think of the prospects. In Paris and Brussels foreign exchange dealers are panic-stricken and throw their pounds on the market for almost any price. Many American holders of sterling are repatriating their funds in haste. In the remote market of Shanghai, silver is soaring on account of the weakness of sterling ; and dealers from Buenos Aires and Rio de Janeiro put through frequent and expensive trunk calls to London to keep in touch with the scene of events. Governments in the countries of the Gold Bloc are taken the gloomiest possible view of the repercussions upon the economic situation of their countries. In the United States, authorities such as Walter Lippmann suddenly remember that it would be a good thing to establish Anglo-American co-operation. On the other hand, the Governments of the countries of the Sterling Bloc are beginning to be concerned as to wither their alliance with sterling may lead their currencies.

In the turmoil of the excitement caused by the slump of sterling, there is only one country which has kept its nerve, and that is Great Britain. The City is calm ; and there is no display of hysterics in the Press. Although a fanatic of orthodox monetary doctrines and some opposition politicians tried to stir up some excitement in the House of Commons last Thursday, the Chancellor of the Exchequer disposed of their questions with monosyllabic answers ; and the Speakers of the House ruled that a debate on currency is not a matter of urgency. This display of indifference in official quarters accentuated the sterling scare abroad, since it indicated that the British authorities are not particularly worried about the developments. Indeed, Mr. Neville Chamberlain said so almost in so many words, when remarking upon the difference between the depreciation of the gold or international value of sterling and its internal value. This remark, in addition to his emphatic statement that there are no prospects of an early stabilisation of sterling, was largely responsible for the accentuation of the weakness of sterling on Friday. It has been known for some time in well-informed circles that the Treasury considers sterling grossly overvalued compared with the dollar and that it would not think of discussing stabilisation, unless and until the sterling-dollar rate declined below 4.50. The attitude of the Chancellor of the Exchequer in face of the fall of sterling has now been interpreted as a confirmation of these views. It was expected consequently that the Exchange Equalisation Fund would not exert itself to counteract the declining trend.

On Saturday morning the sterling pressure on stering became further accentuated as a result of the publication of the Prime Minister's letter to Mr. Lloyd George inviting the latter to submit his plans to the Government. Possibly, this was a mere tactical move ; possibly, it was an indication of the Government's willingness to take over some points from Mr. Lloyd George's New Deal plan ; possibly, it indicated that the Government was prepared to take over Mr. Lloyd George himself, with or without his plan. Rightly or wrongly, the market interpreted the correspondence as foreshadowing complications in internal politics, with the possibility of an early general election and the probability of increased public expenditure. Since the original cause of the weak tendency of sterling was the fear of a general election, it is only natural that the developments over the week-end should accentuate the fall.

In face of the decline of sterling, the attitude of the Exchange Equalisation Fund was in accordance with the practice it has pursued ever since 1932. The authorities never aimed at pegging sterling rigidly with the aid of the fund. Whenever they found buying or selling pressure too strong, they yielded and confined themselves to moderating and regulating the upward or downward movement and to making themselves felt by frequent intervention, so as to prevent

the market from getting out of control. These tactics have been pursued throughout the prolonged period of selling pressure on sterling, which began in May, 1934 and has been going on ever since, almost without interruption. The authorities must have spent very large amounts in trying to support sterling during the last ten months. They had practically no opportunity to replenish their gold resources through exchange operations ; but nobody knows how much gold they bought up on the London market. During the last fortnight, they were supporting sterling without attempting to prevent its decline. On Friday morning, for the first time, they intervened heavily to check the fall ; but they found the attempt too expensive and abandoned it in the afternoon.

Simultaneously with the operations of the British Exchange Equalisation Fund the American Exchange Stabilisation Fund also took action to prevent the unwanted appreciation of the dollar in terms of sterling. They were comparatively new to the game and had to learn a lesson. Until about a week ago they have been buying sterling heavily in the hope that they would use it for the purchase of gold and silver. In reality, however, the market in the metals was limited and the American authorities were unable to spend all the sterling they bought. Their purchases were partly responsible for the rise in silver and also for the unprecedented rise in the premium of gold on dollars. Since they found they were unable to use up all their sterling, they decided to stop buying at the beginning of last week. As sterling has fallen considerably ever since, they have suffered a fairly substantial loss on their holding. They may find this lesson useful in shaping their policy in future.

As to the British authorities, they have every reason to regard the fall of sterling with equanimity and even with satisfaction. Indeed, the fall of sterling is likely to kill several birds with one stone. In the first place, there can be no doubt that sterling is overvalued compared with the dollar. In his statement made in December last, the Chancellor of the Exchequer expressed his hope that equilibrium would be restored through the reflationary policy adopted by President Roosevelt. Since then, ten weeks have passed ; and there has been no sign of any material rise in commodity prices in the United States. The disequilibrium between British and American prices is as pronounced as ever. Nor is there the least likelihood of its removal through a revaluation of the dollar in an upward direction. That possibility was ruled out completely by the attitude of the Administration during the gold clause scare of recent weeks. Thus, the only way of eliminating the disequilibrium is through a depreciation of sterling. For this reason, it is conceivable that the movement is welcomed in Whitehall, even though the authorities consider it their duty to resist it to some extent.

It is true that the depreciation of sterling, while reducing the disequilibrium with the United States, tends to accentuate the disequilibrium with the countries of the Gold Bloc. Sterling is now even more undervalued in relation to the franc than it was before, and its depreciation is bound to increase the financial, economic and political difficulties of the gold countries. Notwithstanding this, the fall of sterling is to be welcomed not merely from a British point of view but also from the point of view of the countries which are at present adversely affected by it. For if it goes far enough, it is likely to force the hands of the Governments of the gold countries to devalue their currencies. As it was, before the present movement of sterling began, all the countries of the Gold Bloc began to entrench themselves in defence of their currencies on the existing levels. In some countries active deflation was continued ; while other countries such as Italy have resorted to drastic import restrictions in defence of their currencies. Conceivably, this fight against the inevitable devaluation would have been prolonged for years had sterling remained around 74 francs. Should, however, sterling depreciate to, say, 65, it may break the resistance of the opponents of devaluation within the Gold Bloc and instead of prolonging the agony, the Governments will take the steps dictated by their own interests without further delay. This will be the case especially if, as is possible, President Roosevelt is induced by the fall of sterling to devalue the dollar to the authorised limit of 50 cents. From this point of view alone, the depreciation of sterling is a highly welcome development. Until recently, the view was held that President Roosevelt did not intend to avail himself of his right to devalue the dollar to 50 cents, except as an electionary weapon before the next presidential election in November 1936. Uncertainty about his intentions in this respect would have remained for another twenty months or so. By forcing him to take the action at an earlier date, the depreciation of sterling would have the beneficial effect of clearing the atmosphere of suspense.

The question is, how far the downward movement of sterling will go. Until now the amount of foreign balances repatriated is believed to be relatively small. The depreciation of sterling took place on a comparatively moderate volume of actual dealings. Nor has speculation taken a hand on a large scale. Should the weakness of sterling continue, it is bound to provoke the wholesale transfer of funds not only by holders in gold countries, but even by holders in countries of the Sterling Bloc. It would also provoke a world-wide bear campaign which would accentuate the slump. Last but by no means least, even British capital would begin to take flight abroad, especially as the anticipation of a general election would, in any case, tend to cause a certain outflow of capital. It is possible and even probable that before the slump of sterling goes much further, there will be a recovery through official intervention or profit-taking. Taking a long view, however, the undertone of sterling is bound to remain weak between now and the general election whenever it is to take place.

London, 5th March, 1991.

(*Continued from page 919*).

Rs. 137.648 lakhs initially that is, till the scheme begins to operate, rising gradually to Rs. 192.600 lakhs at the end of ten years. It must be mentioned that the initial expenditure of Rs. 137.648 lakhs includes the sum of Rs. 10.80 lakhs which has already been expended on the provision of pipes in the dam and also a sum of Rs. 44.52 lakhs incurred on the extension of the transmission system to Trichinopoly and Tanjore districts which have been already made as under the Pykara system. About Rs. 2 lakhs will also be covered by the transfer of credits for the value of buildings etc., to be taken over from the Cauvery Mettur project. The net initial expenditure to be incurred on the scheme is, therefore, only about Rs. 81.208 lakhs. The programme of expenditure during the construction period will be Rs. 10.2 lakhs in 1935-36, Rs. 45.3 lakhs in 1936-37 and Rs. 25.708 lakhs in 1937-38. It is estimated that a net return of over 4 per cent. may be expected in the first year ; and in the tenth year the project is expected to yield 8.5 per cent. with an accumulated revenue surplus Rs. 9.67 lakhs. It must be mentioned here that these estimates cannot be wide of the mark, in as much as they are based on the experience already gained from the working the Pykara scheme and the results of the Thermal stations already existing in the Presidency as also the Hydro-Electric system in the United Provinces which has been working for more than four years. It is proposed to start the construction in April 1935 ; and, there can be no doubt, that the Council will grant only too readily the requisite amount of Rs. 10.2 lakhs.

PUBLICATIONS OF THE LEAGUE OF NATIONS

"BALANCES OF PAYMENTS, 1933"

Price: Rs. 4-2-0

Only existing statistical book of reference concerning international accounts (trade in goods and services, gold, long and short-term capital operations). Figures, are given for 32 countries, in the majority of cases for a series of years up to 1933 inclusive. Information is also supplied concerning outstanding international liabilities and assets. In a summary chapter the general tendencies up to September, 1934, are dealt with, special consideration being given to the effect of currency depreciation.

"ARMAMENTS' YEAR-BOOK, 1934"

Price: Rs. 13-12-0

This edition contains monographs on 64 countries, both members and non-members of the League, The information contained is derived from two sources: the communications from various Governments to the Secretariat on the occasion of the Conference for the Reduction and Limitation of Armaments and the official publications of the different countries, such as collections of laws, army gazettes, etc,

"NATIONAL PUBLIC WORKS"

Price: Rs. 8-4-0

This book has just been issued by the Communications and Transit Organisation of the League of Nation and is the result of a letter addressed by the Secretary General of the League requesting various Governments to communicate to him the following particulars: (1) A brief description of the main public works undertaken since the beginning of the year 1929; (2) The principal administrative methods followed or contemplated for the execution of such work; (3) The principal methods employed for financing such work; (4) An estimate, as far as possible, of the allocation of expenditnre on the execution of the possible works.

"INTERNATIONAL TRADE STATISTICS, 1933"

Price: Rs. 6-14-0

This volume analyses the foreign trade during the years 1931, 1932 and 1933 of 65 countries accounting for 95% of the total world trade. It contains more than 300 tables, which are accompanied by explanatory notes. The data it gives illustrate strikingly the great changes undergone in recent years in the composition and direction of foreign trade, and their effect in the position of the individual countries. The synoptical tables show the percentage distribution of each country's imports and exports by provenance and destination.

OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

L, G,'s ATTACK ON UNEMPLOYMENT

Mr. Lloyd George elaborated in the course of the week his scheme for a New Deal in Great Britain. As was expected, his chief point of attack was unemployment. And he holds that it is possible to remove this national stigma through elaborate public works activities. In short, he would like, like Mr. Roosevelt, to spend his way out of unemployment. The unemployment figure is still about the 2¼ million mark. And this large army of unemployed naturally look again to the many subsidies the Government are offering to different industries, which might have gone towards public works expenditure and expanded employment. The Government, in fact, are open to the charge that they have been indiscriminately generous. With so many on the unemployment roll, a Government has hardly any right to indulge in expensive subsidies, to industries which are often depressed for lack of organisation or co-ordination. The best solution, of course, would be a natural recovery in trade. But so far the only thing achieved by the Government has been the balancing of the Budget. And even this chimerical benefit is about to disappear. For this year, the Budget will not be anywhere near the surplus budget of last year. Mr. Lloyd George can claim consistency for his plea ; for he once fought an election on the public works issue. The policy was even tried in 1929-30 and had to be discontinued owing to the great derpession. L. G.'s contention that "we have got the men, we have got the materials, we have got the money too" would seem to be justified in the light of Governmental announcements. That there are men was painfully demonstrated by the hunger strikers who marched through London sometime ago. Materials, Great Britain never lacked with her fertile empire following the policy of discriminating protection and the Ottawa Pact. Whether she has also the money may be disputed. But she obviously has enough money to grant subsidies to beef, milk and sugar and shipping. Indeed, Mr. Lloyd George's arguments seem to be unanswerable. And unless the Government can quickly form a pact with this favourite at the pools, it is likely that he will once more dominate the elections on the New Deal question.

That the railways are participating largely in what trade revival has taken place in Great Britain was demonstrated in the course of the week by the speech of Sir Robert Horne at the annual meeting of the Great Western Railway when he presented the accounts of the Railway for the year 1934. In 1933 the dividend on the Preference shares was shortened ; but 1934 justified an award of one per cent. even on the ordinary stock. From all angles, the accounts reveal an excellent position. The usual high standard of maintenance and renewals was unchanged. And considerable improvements are apparent in crucuial figures like the coal consumption per engine mile and the average mileage run daily per engine.

Certain factors such as wage cut restorations and new machinery for negotiation are common to all railways and affected the Great Western Railways also. But there are certain special features of this Great Western on which the Chairman dwelt. The Great Western took up in 1929 a heavy building programme with Government help, which it hopes to complete this year. It hopes also to be able to embark on a larger building programme but only with Government assistance in the form of a grant of interest on the capital locked up.

In the light of the previous paragraph, one is afraid that they will have to wait for the change of Government before the desire is fulfilled. Sir Robert also dwelt on the important decision of the Railway and Canal Commission in regard to the assessment of the Southern Railways property. It is expected that the G.W.R. assessment should also be reduced from £2,310,000 to about the level of the Southern Railway. It will then mean a saving of about one per cent. on the ordinary stock of the G.W.R. This is, in fact, the brightest silver lining in the cloud ; for the G.W.R. has been, and still is, affected, to a larger extent than other Railways, by the depression in the coal industry. And one can hardly put much faith on the coal agreements made with Poland and Ireland. The pacts England makes, whether political or industrial, have a knack of proving strangely ineffectual in practice.

Budget hopes were somewhat restored during the week under review by a sharp increase in revenue and a moderate decline in expenditure. If the same rate of progress persists, the Chancellor may be spared the awkward situation of presenting an unpopular Budget. There is still a leeway of £21,091,388 to be made up whereas at the corresponding date last year there was already a surplus of £3,380,784. A comparative statement of receipts and expenditure is given below.

	1935 £	1934 £
Expenditure ...	719,500,601	705,215,300
Revenue ...	967,409,263	708,596,084
Total ...	−21,091,338	+3,380,784

Computed according to this week's rate of revenue and expenditure, there may be a small surplus of £6,675,738 ; but there is still an extra expenditure of £ 1,134,230 required for fixed debt charges. This brings the figure of the possible surplus down to nearly £5½ million. This, however, does not take into consideration the extra expenditure recently incurred by the Government. And it is hardly likely that the Chancellor will be successful in more than balancing the Budget.

Total receipts from revenue during the past week amounted to £25,290,443, as compared with £22,065,000 a year ago. On the other hand, expenditure absorbed only £10,137,607, against more than £11,000,000, so that the surplus of revenue over expenditure for the week amounted to £16,152,836, an increase of more than £5,000,000 compared with the same week of 1934.

Income-tax yielded £12,821,000, only £200,000 less than last year, despite the cut in the basic rate from 5s. to 4s. 6d. in the £.

A new issue of National Savings Certificates will be on sale from March 1, according to an announcement of the Treasury. The 5th issue, *i.e.*, the previous one has been withdrawn from sale. The purchase price of the New Certificate will be fifteen shillings which will be repayable at the end of ten years at 1 £. The previous issue cost sixteen shillings rising to 23 shillings in twelve years. The yield on the present issue, if held for the full period, of twelve years, is £3-1-5 free of income-tax. The yield on the new issue, if held for the full period of 10 years, is £2-18-4 compound interest free of income-tax. This reduction in the yield is in conformity with the reduction in the yield on Government receipts generally. It is also in conformity with the undoubted desire of the public to go in for short-dated loans. It is amazing what enormous sums find their way to the Exchequer through these small systems of thrift. And these savings certificates are really more suited to the labourer of small means than any other form of investment. The saving certificates are, therefore, assured of a wide appeal.

The detection of the Princes at Bombay has lent a new flavour to the India question. Mr. Churchill, who is proving his abilities as an opportunist, has pounced upon this fresh development as one of the strongest weapons against the Government. The decision, in fact, strengthens the contention that a large

body of people in India are opposed to the idea of Federation. "Why, says Mr. Churchill, "federate when so few people want it." Sir Samuel Hoare in his interpretation of this development pins his faith to the possibility of bringing the Princes round to a more reasonable attitude. In fact, he declared that the Princes are not radically at variance with the principle of Federation. And the few minor changes in the conditions of joining the federation would placate most of them. Sir Austen Chamberlain allowed his resentment at the attitude of the Princes to be shown in his concluding sentence in which he said that the Government would not enter a Dutch auction for the sake of placating the princes. In view of this fresh development the fate of the India Bill becomes less certain and predestined than it was believed ; but beneath all this pother is the determination of Great Britain to foist a constitution on India, whether Princes or plebians want it or it. The debate on the India Bill is like a debate on the irrevocable and unpreventable course of destiny.

U. S. A.

THE COURTS ON THE WAR-PATH

With the decision of the Supreme Court on the gold clause, one would have thought that Mr. Roosevelt's star was again on the ascendent and that from then he would have a smooth run of good luck with his measures of recovery. But hardly has the curtain fallen over the gold clause cases, than it has been rung up again over a scene of variegated embarrassment for Mr. Roosevelt. It was observed sometime back in these columns that the evils of the written constitution were never more keenly felt by people nor more bitterly resented by the Administration than at the time of the gold clause cases. It would seem that the present occasion is apt for a repetition of that observation. For the courts are again crossing the path of Mr. Roosevelt. It is understandable that no judge worth the name can help giving an adverse verdict when the spirit and the letter of the law require it. And such decisions, too, when they accumulate would not be a serious problem ; for, a number of such adverse verdicts would make the most unanswerable case for a revision of the constitution and a reconsideration of the position of the judiciary. It is only the isolated case of an adverse judgment that will make an irritating pinprick to the Administration. But at the present moment, the courts are not the only source of embarrassment for the President. Even Congress freely adds to his difficulties. The situation is, indeed, so hazy and the outlook so threatening, that one can only set down the week's developments without attempting to assess them.

First in the order of importance comes the decision of the Federal Court in Delawere, which has declared Section 7 (*a*) of the National Industrial Recovery Act to be unconstitutional. It will be remembered that Section 7 (*a*) is one of the crucial provisions of the National Recovery Act, as it provides for the formulation of codes which would be binding on the employers and the employees. The Delawere Court have taken the view that under the constitution Congress has power to regulate only inter-state commerce and that the relations between employers and employees cannot be regarded as coming within the scope of inter-state commerce. It is obvious that, unless the judges are prepared to grant that the relations between employers and employees determine to a very large extent the conditions of inter-state competition and that, therefore, Congress cannot regulate inter-state commerce without exercising legislative authority on this subject, they will have to pronounce against the constitutionality of Section 7 (*a*) of the National Industrial Recovery Act. Unfortunately, tht President's problem begins where the judges' has ended. The whole structure of the N.R.A. rests on these codes. And when the codes have been declared to be illegal, both capital and labour will claim and exercise the right of refusing to be bound by the provisions. And the results may be easily imagined. It is not known whether there is any small technical change which will enable the Administration to circumvent this finding of the Federal Court in Delawere.

Another serious embarrassment for the President is a finding of the Federal Court in Alabhama that the Tennessee Valley authority has no constitutional power to sell electricity in competition with private companies. This ruling of the court makes it impossible for the authority concerned to generate electricity and conduct any profitable business therein. And such a business is a major item in the schemes that have been so far evolved for the development of the Tennessee Valley. The sale of publicly generated electricity in the Valley has also a large place in the campaign for bringing about a reduction in the utility rates. Thus there is, in this, another instance of the Courts jeopardising a major scheme of the Administration.

Perhaps, the most unkindest cut is from the Senate, which has carried an amendment to the Relief Bill in the teeth of Presidential opposition. The President has all along insisted that the rates of wages payable for relief schemes should be less than those available in private employment, on the ground that such a difference in wages is essential for distinguishing relief works from economic employment. With this principle, the Senate is not in agreement. As a result of the general elections, Congress has numerous left wing labourites who like to insist that, when the state provides relief works, it should not try to take advantage of the position of the unemployed and attempt to secure labour on less than the usual wage rates. And the opposition has taken advantage of the President's absence on a holiday to carry an amendment insisting that wages on relief works should be the same as wages under private employment.

Taken together, all these adverse developments create a situation of extreme embarrassment for the President. But there is no reason to take an unduly optimistic view. So far as the judicial findings are concerned, the Administration may appeal to the Supreme Court ; and it is not till the decisions of the Federal Courts are confirmed by the Supreme Court that the Administration will have to reconsider and revise its plans. It is not altogether impossible that some of these decisions may be reversed by the Supreme Court. But in that case, only the Senate's amendment of the Relief Bill will remain for the President to tackle.

And this, if it comes to it, the President might consent to overlook. For, after all, there is no reason why Mr. Roosevelt should insist on lower rates of wages for men employed in the relief works. This question is not so fundamental that Mr. Roosevelt need regard it as a matter of confidence of the legislature in himself. It might be that, as a result of this amendment, the various authorities, central and local, may have to find additional resources and, if additional resources are not available, may have to abandon certain schemes. In fact, it is generally believed that the Administration will try to win the Senate over to its side by inducing the state and municipal authorities to make it clear that such wage rates cannot be maintained with the funds at their disposal. Even at this late hour, it is not impossible that the Senate may relent. In all such crucial cases, the President's return from a holiday has always made a great deal of difference. So was it in 1933 with the veterans' pensions. The power of Mr. Roosevelt's personality was demons-

Air Mail Week

trated more than once in the long tussle between him and the silver bloc in the third quarter of 1934. History may yet repeat itself and the senate consent to withdraw the amendment. The fact that the Bill has been referred back to the committee encourages this hope.

FRANCE

THE LOAN AGREEMENT

More details are now available regarding the terms of the Bank of France loan agreement, the conclusion of which was hinted in these columns last week. After a good deal of opposition, the Council of Regents has unanimously agreed to grant loans against public securities with fixed redemption date and having a maximum term of two years. Treasury Bonds and National Bonds have thus secured for them the official recognition for a place in the investment portfolio of the Bank of France. This general agreement is, however, qualified by a number of clauses which are meant to prevent speculation. By limiting the securities that can be accepted to those having a term of less than two years, the rentes, bonds and debentures having a longer term are automatically debarred from the previleged position of being accepted as security for advances. The Treasury Bonds and National Defence bonds alone will be benefitted by the decision.

Three are also other qualifying clauses: The loans that will now be granted by the Bank will be limited in duration to a minimum of 7 days and a maximum of 30 days, unlike the other loans. The rate of interest that will be charged will not be the official loan rate of 4½ per cent. nor will it be the official rediscount rate of 2½ per cent. It will be 2⅝ per cent which, as it will be seen, is a trifle higher than the rediscount rate and is intended to be a safeguard against speculation. This rate is also subject to variation according to circumstances. Moreover, the *Caisse des Depots* is already granting loans against National Defence Bonds for a period of 15 days at a time but subject to frequent renewals—at a rate of 2½ per cent. With the result, the Bank of France by raising the rate will be able to prevent a large number of application for loans against these bonds. There is also the amount that the Bank will lend against these securities; and though this is normally upto 80 per cent of the full value, the Bank of France has discretion to increase or decrease it.

A further safeguard, that this extended discount facility is not misused by the public, is the provision that requires the publication of the total amount of there loans against public securities in the weekly returns of the Bank of France as a separate item. The authorities of the Bank of France will, therefore, be able to adjust the total amount of these loans every week. It is already rumoured that the maximum amount has been fixed at 2,500 to 3,000 millions for the new loans.

It will be seen from the above that the assistance to be given by the Bank to the Government on the one hand, and industry on the other, is only limited and that the independence of the Bank is not in any way assailed, as it was feared when the new credit policy was outlined by M. Flandin. The Bank will now assist the issue of 5,000 millions of Treasury Bonds at the same time providing a safety value for the money market. Unfortunately, the Bourse has not received these proposals very enthusiastically. Certain amount of disappointment and scepticism are evident. Much is made of the various limitations now imposed by way of tenure, interest etc., of the loans. Some express doubt if the supposed safety valves will not prove to be real clogs that will completely stop the working of the machinery. On a closer examination, this disappointment appears to centre round one or two points in the new official policy of the Bank that require to be cleared up. One is regarding the renewal of the loans against the same Treasury Bonds for a further period of 30 years after the expiry of the previous term. Similar arrangements exist in the *Caisse des depots* where the loans against National Defence Bonds are renewable. This system will transform what is intended to be a limited advance into a system of extended discount operation. Another question is about the three years' 4½ per cent Debenture issued in October 1934. After the coming October, these Bonds will have a term of two years before maturity though originally the term was three years. Will the Bank of France advance money against these debentures, the total amount of which is estimated to be nearly 8,000 millions? These are, of course, points to be decided during the actual working of the policy and will not find a place in the general agreement. The success of the policy will, therefore, depend on how far the Bank is able to meet the demands of the market in these respects.

Whatever may be the exact amount of relief that the money market may get from the advances, the prospects are not rosy, from the standpoint of the reduction of long term interest rates which the Government is anxious to bring about. The two institutions, that have stood all along in direct competition with the authorities in the matter of interest rates, are the public Savings Banks and *Caisse des Depots*. The rate of 3½ per cent. offered by the Savings Bank and Post Office cheque system, which eliminates commission for banking services, were chiefly responsible for draining away the available resources from the Public deposits with the various banks. The higher rate for Savings deposits is necessary to attract funds to supply the *Caisse des depots* which was the main prop to the Rentes market and to the Treasury. Already the public deposits of the Big Five have shown a decline by about 2,500 million in 1934 as compared with 1933. It would, therefore, appear that any conscious attempt to lower the interest rates will necessarily involve a thorough reorganisation under the control of the Bank of France.

(*Continued from page 891*)

such that they are not quite helpful to the institution of a policy of cheap money. The *Financial News* suggests that the Bank of France has actually followed a policy of passive resistance in its dealings with the Treasury. It is said that the Premier has at last found that, in order to bring over the Bank of France to his side, it is not sufficient to effect a change in the Governorship of the Bank. What has happened is that, while M. Tannery has been ready to accord support to the Government, the other officials of the Bank have been ready and able to put a spoke in the wheel. The Agreement that has been concluded between the Bank and the Government shows the extent to which the Bank officials can shape policy. Sometime ago it was observed that the banks in France were endeavouring to force the hands of the Government in regard to the question of devaluation by refusing to co-operate in the compromise which the Premier was trying to effect through the introduction of a policy of cheap money. If the recalcitrance of the officials of the Bank of France is part of that move, there would be reason to think that France will be moving farther away from the policy of maintaining the franc at its present level. But there is still no sign that the official policy has changed or is changing. In Belgium, too, there is a similar indeterminate situation. But it is significant that the move against the deflationary policy is gaining strength and has found expression in a book which has just been published by M. Ludovic Cloquette entitled "Le Rattachement du Franc Belge a la Livre Sterling." Mr. Cloquette has entered a plea for Belgium joining the sterling bloc.

PROSPECTUS

THE RESERVE BANK OF INDIA

Incorporated under the Reserve Bank of India Act (II of 1934.)

Issue for public subscription of shares of the Reserve Bank of India of Rs. 100 each

The shares are issued subject to the provisions of the Reserve Bank of India Act (II of 1934) and allotment will be made in accordance with section 4 of that Act, an extract of which is attached.

Under Notification No. D. 825-F, dated the 2nd March 1935, issued by the Governor General in Council under section 47 (extract attached) of the Reserve Bank of India Act, the cumulative dividend to be payable in accordance with the provisions of that section of the Act is fixed at the rate of 3½ per cent. per annum.

1. Applications will be received from the 22nd March 1935 to the 25th March 1935, both days inclusive, from persons qualified to be registered as shareholders in one of the areas defined in the First Schedule of the Reserve Bank of India Act (copy attached), subject to the proviso that if at any time before the last date mentioned above the number of applicants who have applied for 5 or more shares each in any particular area exceeds one-fifth of the total number of shares assigned to that area [*vide* section 4 (5) of the Act], the acceptance of further applications for less than 5 shares may be thereafter discontinued in that area without previous notice to the public.

(Applications sent in before the opening date will be accepted but such early applications will not receive any preference in the event of the issue going to allotment nor will they be dealt with before the opening date of the issue. Applications may also be sent by post, but should be accompanied by the requisite remittance.)

Applications will be received at—

(*a*) any Local Head Office or Branch of the Imperial Bank of India in India ;

(*b*) any treasury at the headquarters of a district in British India where there is no branch of the Imperial Bank of India, and

(*c*) any Head Post Office in India.

Applications should be made at an office situated in the particular area in which the applicant is qualified to be registered as a shareholder. A list of the various offices that will be receiving applications in each area is attached (Appendix I). No subscriber should make more than one application.

NOTE.—An application from a corporate body may be signed on its behalf by a duly constituted attorney. In every other case the application must be signed by the applicant himself, and in the case of an application for joint holding, by all the joint applicants. Except as above, applications will not be received if signed by one person on behalf of another (*e.g.*, an attorney, a guardian), nor will applications be received from firms in the firm name.

(Application forms may be obtained free of charge at any of the offices mentioned above.)

2. Applications must be in English in the form attached and must be accompanied by the tender of the full purchase price of the shares applied for.

(*N.B.—Applications in which the forms have not been correctly filled in, or which are incomplete, will be summarily rejected.)*

3. Payment must be made in cash or by cheque on a bank situated at the place at which the application is being made. Cheques should be drawn in favour of the office at which the application is presented.

4. The price of one share is Rs. 100.

5. The attention of intending subscribers is invited to the provisions if sections 4, 47, 48 and 57 of the Reserve Reserve Bank of India (Act II of 1934), extracts of which are attached.

6. Allotment letters will be issued to the subscribers whose applications have been accepted, in full or in part, by the Central Office of the Reserve Bank of India through the respective offices at which the relative applications were received as soon as practicable after allotment.

7. Refunds of subscriptions, or portions of subscriptions in respect of which no shares have been allotted, will be made as soon as possible after allotment. If, however, the contingency mentioned in the proviso to paragraph 1 above materialises, arrangements will be made to refund the money earlier. Without waiting for the allotment the whole amount received from applicants for less than 5 shares and the amount representing the excess over the purchase price of 5 shares received from applicants for more than 5 shares will be returned to the persons concerned at the earliest opportunity. The balance of the amount received from the latter will be refunded after the allotment has been made if the applicant has not been allotted any shares. *No interest will be paid on any amount so refunded.*

8. Allotment letters will be exchanged for share certificates as soon as can be conveniently arranged. One share certificate will be issued to each allottee in respect of the total number of shares allotted to him. An announcement will be made in the press by the Central Board of the Reserve Bank of India when the certificates are ready for issue. The holders of these allotment letters should then send them to the Secretary to the Central Board, Reserve Bank of India, 8, Council House Street, Calcutta, by registered post. The share certificates will be delivered to the holders from the office at which the applications were tendered.

By order of the Central Board of Directors
of the Reserve Bank of India.

S. S. RACHHPAL,
Secretary to the Central Board.

CALCUTTA,
The 8th March, 1935.

THE RESERVE BANK OF INDIA ACT (II OF 1934).

SECTIONS 4, 47, 48 AND 57.

(See preamble to and paragraph 5 of the Prospectus.)

4. (1) The original share capital of the Bank shall be five crores of rupees divided into shares of one hundred rupees each, which shall be fully paid up.

(2) Separate registers of shareholders shall be maintained at Bombay, Calcutta, Delhi, Madras and Rangoon, and a separate issue of shares shall be made in each of the areas served by those registers, as defined in the First Schedule, and shares shall be transferable from one register to another.

(3) A shareholder shall be qualified to be registered as such in any area in which he is ordinarily resident or has his principal place of business in India, but no person shall be registered as a shareholder in more than one register ; and no person who is not?

(*a*) domiciled in India and either an Indian subject of His Majesty or a subject of a State in India, or

(*b*) a British subject ordinarily resident in India and domiciled in the United Kingdom or in any part of His Majesty's Dominions the Government of which does not discriminate in any way against Indian subjects of His Majesty, or

(*c*) a company registered under the Indian Companies Act, 1913, or a society registered under the Co-operative Societies Act, 1912, or any other law for the time being in force in British India relating to co-operative societies or a scheduled bank, or a corporation or company incorporated by or under an Act of Parliament or any law for the time being in force in any part of His Majesty's Dominions the Government of which does not discriminate in any way against Indian subjects of His Majesty, and having a branch in British India,

shall be registered as a shareholder or be entitled to payment of any dividend on any share, and no person, who, having been duly registered as a shareholder, ceases to be qualified to be so registered, shall be able to exercise any of the rights of a shareholder otherwise than for the purpose of the sale of his shares.

(4) The Governor General in Council shall, by notification, in the *Gazette of India*, specify the parts of His Majesty's Dominions which shall be deemed for the purposes of clauses (*b*) and (*c*) of sub-section (3) to be the parts of His Majestys Dominions in which no discrimination against Indian subjects of His Majesty exists.

(5) The nominal value of the shares originally assigned to the various registers shall be as follows, namely—

(*a*) to the Bombay register—one hundred and forty lakhs of rupees ;
(*b*) to the Calcutta register—one hundred and forty-five lakhs of rupees ;
(*c*) to the Delhi register—one hundred and fifteen lakhs of rupees ;
(*d*) to the Madras register—seventy lakhs of rupees ;
(*e*) to the Rangoon register—thirty lakhs of rupees :

Provided that if at the first allotment the total nominal value of the shares on the Delhi register for which applications are received is less than one hundred and fifteen lakhs of rupees, the Central Board shall, before proceeding to any allotment, transfer any shares not applied for up to a maximum nominal value of thirty-five lakhs of rupees from that reegister in two equal portions to the Bombay and the Calcutta register.

A Committee consisting of two elected members of the Assembly and one elected member of the Council of State to be elected by non-official members of the respective Houses shall be associated with the Central Board for the purpose of making public issue of shares and looking after the first allotment of shares.

(6) In allotting the shares assigned to a register, the Central Board shall, in the first instance, allot five shares to each qualified applicant who has applied for five or more shares ; and, if the number of such applicants is greater than 1/5th of the total number of shares assigned to the register, shall determine by lot the applicants to whom the shares shall be allotted.

(7) If the number of such applicants is less than 1/5th of the number of shares assigned to the register, the Central Board shall allot the remaining shares firstly, up to the limit of one half of such remaining shares, to those applicants who have applied for less than 5 shares, and thereafter as to the balance to the various applicants in such manner as it may deem fair and equitable, having regard to the desirability of distributing the shares and the voting rights attached to them as widely as possible.

(8) Notwithstanding anything contained in sub-sections (6) and (7), the Central Board shall reserve for and allot to Government shares of the nominal value of two lakhs and twenty thousand rupees to be held by Government for disposal at par to Directors seeking to obtain the minimum share qualification required under sub-section (2) of section 11.

(9) If, after all applications have been met in accordance with the provisions of sub-sections (6), (7) and (8), any shares remain unallotted, they shall, notwithstanding anything contained in this section, be allotted to and taken up by Government, and shall be sold by the Governor General in Council as soon as may be, at not less than par, to residents of the areas served by the register concerned.

(10) The Governor General in Council shall have no right to exercise any vote under this Act by reason of any shares allotted to him under sub-section (8) or under sub-section (9).

(11) A Director shall not dispose of any shares obtained from Government under the provisions of sub-section (8) otherwise than by re-sale to Government at par, and Government shall be entitled to re-purchase at par all such shares held by any Director on his ceasing from any cause to hold office as Director.

* * *

47. After making provision for bad and doubtful debts, depreciation in assets, contributions to staff and superannuation funds, and such other contingencies as are usually provided for by bankers, and after payment out of the net annual profits of a cumulative dividend at such rate not exceeding 5 per cent. per annum on the share capital as the Governor General in Council may fix at the time of the issue of shares, a portion of the surplus share be allocated to the payment of an additional dividend to the shareholders calculated on the scale set forth in the 4th Schedule and the balance of the surplus shall be paid to the Governor General in Council :

Provided that if at any time the Reserve Fund is less than the share capital, not less than fifty lakhs of rupees of the surplus, or the whole of the surplus if less than that amount, shall be allocated to the Reserve Fund.

* * *

48. (1) Notwithstanding anything contained in the Indian Income-tax Act, 1922, or any other enactment for the time being in force relating to income-tax or super-tax, the Bank shall not be liable to pay income-tax or super-tax on any of its income, profits or gains :

Provided that nothing in this section shall affect the liability of any shareholder in respect of income-tax or super-tax.

(2) For the purposes of section 18 of the Indian Income-tax Act, 1922, and of any other relevant provision of that Act relating to the levy and refund of income-tax any dividend paid under section 47 of this Act shall be deemed to be "Interest on Securities."

* * *

57. (1) Nothing in the Indian Companies Act, 1931, shall apply to the Bank, and the Bank shall not be placed in liquidation save by order of the Governor General in Council and in such manner as he may direct.

(2) In such event the Reserve Fund and surplus assets, if any, of the Bank shall be divided between the Governor General in Council and the shareholders in the proportion of 75 per cent. and 25 per cent., respectively :

Provided that the total amount payable to any shareholder under this section shall not exceed the paid-up value of the shares held by him by more than 1 per cent. for each year after the commencement of this Act subject to a maximum of 25 per cent.

THE RESERVE BANK OF INDIA ACT (ACT II OF 1934).

THE FIRST SCHEDULE.

(See paragraph 1 of the Prospectus.)

Areas served by the various Share Registers.

I. THE WESTERN AREA, served by the Bombay Register, shall consist of—
the Bombay Presidency including Sind, the Central Provinces, Berar, Hyderabad, Baroda, Khairpur, the Western India States, the Central India States (including Makrai but excluding Rewah and other States of Bundelkhand and Baghelkhand), the Gujerat States, Kolhapur and the Deccan States.

II. THE EASTERN AREA, served by the Calcutta Register, shall consist of—
the Bengal Presidency, Bihar and Orissa, Assam, Sikkim, Manipur, Cooch Behar, Tripura, the Eastern States, Rewah and other States of Bundelkhand and Baghelkhand, and the Khasi States.

III. THE NORTHERN AREA, served by the Delhi Register, shall consist of—
the United Provinces, Delhi, the Punjab, the North-West Frontier Province, Ajmer-Merwara, Baluchistan, Kashmir, the Punjab States, excluding Khairpur, the Simla Hill States, Dujana, Pataudi, Kalsia, Rampur, Tehri-Garhwal, Benares, the Rajputana States including Palanpur and Danta, Gwalior, Khaniadhana, Kalat, Las Bela, Hunza, Nagir, Amb, Chitral, Dir, Phulera and Swat.

IV. THE SOUTHERN AREA, served by the Madras Register, shall consist of—
the Madras Presidency, Coorg, Mysore and the Madras States.

V. THE BURMA AREA, served by the Rangoon Register, shall consist of—
Burma, the Andaman and Nicobar Islands, Bawlake, Kantarawadi and Kyebogyi.

THE FOURTH SCHEDULE.

(See section 47.)

Scale of Additional Dividend Payable to Shareholders.

A. If the maximum rate of dividend fixed under section 47 is five per centum and so long as the share capital of the Bank is five crores of rupees—

(1) if the surplus does not exceed four crores of rupees—*Nil* ;
(2) if the surplus exceeds four crores of rupees—
(*a*) out of such excess up to the first one and a half crores of rupees—a fraction equal to one-sixtieth ;
(*b*) out of each successive additional excess up to one and a half crores of rupees—one-half of the fraction payable out of the next previous one and a half crores of excess :

Provided that the additional dividend shall be a multiple of one-eight of one per cent. on the share capital, the amount of the surplus allocated thereto being rounded up or down to the nearest one-eighth of one per cent. on the share capital.

B. If the maximum rate of dividend fixed under section 47 is below five per centum, the said fraction of one-sixtieth shall be increased in the ratio of the difference between six and the fixed rate to unity.

C. When the original share capital of the Bank has been increased or reduced, the said fraction of one-sixtieth shall be increased or diminished in proportion to the increase or reduction of the share capital.

JUTE AND JUTE GOODS

JUTE

Calcutta, March 13.

Quiet and steady was the tone of the market last week, March futures declining to Rs. 29-15-0 per bale, due to large stocks being held by local dealers. Reports indicate a four-anna restriction: probably more.

In sympathy with loose jute, pucca bales are steady, sellers' quotations being on the basis of Rs. 30-8 per bale for prompt shipment Firsts. Shippers are not active.

In the Kutcha bales section Inditn Jute XL/R are offering at Rs. 4-12 per maund, without being taken up. Business in the new crop Jute XL/R was done at Rs. 5-6 per maund.

Total arrivals of jute from July 1, 1934 to March , 1935 were 76,56,000 bales against 71,000,000 bales during the same period in the previous year, while total exports were 30,500,000 bales against 32,000,000 bales.

JUTE MANUFACTURES

Calcutta, March 13.

A weak jute market reacted on gunnies in minor fluctuations. Some business in odd widths and weights for ready delivery was done: but buyers were not in evidence. Ready sold at Rs. 11-12-6 basis and July-September 11 porters at Rs. 11-14-6. 40 inches 8 oz. March went through at Rs. 9-5-6.

Nothing doing was the tone of the heavy goods section. B. Twills and Liverpool Twills for March delivery are at Rs. 25-5 and Rs. 28-4 respectively.

COTTON AND COTTON GOODS

COTTON.

Calcutta, March 13.

In Bombay the market closed firm over the week end, after opening steady at Rs. 235-12 for Broach April-May; Oomra March at Rs. 215 May at Rs. 212, Bengal March at Rs. 137-4 and May at Rs. 139-4: Broach July-August at Rs. 235-8.

A sensational collapse in cotton on Wall Street took place on March 11, prices, closing on an average, 100 points down. The collapse is the result of the severe shock to confidence imparted by the Government's decision to exempt from the Bankhead Act farms producing less than two bales of cotton which is considered sufficient to deprive the restriction plan of its usefulness.

The present position is not unusual in the cotton market at this time and is attributable largely to the operations of option-dealers, who seem disposed to maintain a price level between Rs. 240 and Rs. 250 for the Broach April-May 1935, contract till the end of this month, with a partiality for still lower prices.

Statistically the position is sound. The stock of raw cotton in Bombay (741,000 bales) is 32 per cent. less than last year this time. All-India exports are 33 per cent. more than last year. Internal mill consumption to end of January, 1935, is 1,151,000 bales compared with 964,000 bales same period last year, a gain of 19 per cent.

According to the New York Cotton Exchange Service, the stock of Indian cotton in India on December 31, 1934, including the estimated unpicked portion of the crop, totalled about 4,829,000 bales of 400 lbs., each, compared with 5,902,000 bales last year. Indian mills will require 1,500,000 to 1,600,000 bales during the remainder of the season, leaving about 3,200,000 to 3,300,000 bales for export and end-season stocks. Last season exports from India during January-July totalled 2,583,000 bales: two seasons ago, 2,001,000 bales: three seasons ago, 939,000 bales: four seasons ago, 2,375,000 bales, while the pre-depression average was 2,733,000 bales.

Mill consumption of all raw cottons in Japan during the second half of 1934 totalled 101,237 kan (1 kan=8.267 lbs.) compared with 87,89,000 kan during the corresponding period in 1933. The heavy advance in the price of American cotton during that period brought about an increase in consumption of Indian cotton from 29,014,000 kan in the second half of 1933 to 43,899,000 kan in the same period of 1934.

COTTON PIECEGOODS

Calcutta, March 13.

The dullness of previous weeks seemed to have lifted a little during the week end, though it did not attain the proportion of an improvement. Enquiries about Indian mill products, resulting in desultory business, introduced an activity in the local market which may solidify with the approach of the *Id* festival. Upcountry consuming centres are showing some interest and dealers are in a mood of compromising in the matter of prices.

The same condition obtains in Bombay. Fresh business is drifting in slowly. The double shift programme has not aggravated heavy stocks and prices are steady. Lancashire lighter fabrics were fancied in moderation. It was expected that in view of the tariff situation being cleared, there would be more demand: nothing points that way just now.

The yarn section is featureless, with prices ruling nominally steady. Except at lower than present prices, trade seems to be impossible. Mills are disposed to sell, but their prices are not in line with ruling rates. On this account Japanese are capturing fluid sales, both in simple and double yarns. English yarns are not doing well.

Cotton yarn production in Japan during January, 1935, amounted to 306,205 bales, compared with 320,366 bales in December, 1934. The decrease is attributed to the decline in the yarn market quotation below the legitimate cost. The Japan Cotton Spinners' Association have decided to curtail yarn production during April-June, 1935, by 5 per cent.

BULLION

GOLD

Calcutta, March 13.

The persistent weakness in the New York-London and Paris-London cross rates continued to keep up gold prices early last week. It was followed by an easier tone in the Bombay Market, though there was a certain amount of uneasiness among bull operators on account of reports that the United States Government were forced to sell dollars by utilising its Exchange Utilisation Fund.

Trading for the first settlement started in Bombay on March 8 at Rs. 36-11-0 against the previous closing rate of Rs. 36-12 owing to bull operators realising profits. Speculative selling and liquidating bull operations brought down the rate to Rs. 36-8-6 which later steadied to Rs. 36-9.

Owing to the high rate, upcountry arrivals at Bombay increased to about 25,000 tolas a day last week, which were absorbed by heavy buying on foreign account, both for near and forward delivery. Stocks are estimated at between 3,00,000 and 4,00,000 tolas, the daily off-take being about 3,000 tolas.

The price of sovereign in Bombay soared as high as Rs. 23-2 for ready and Rs. 23-3-2 for forward. The highest and lowest rates were respectively Rs. 34-14-9 and Rs. 36-2-3 for March 22 settlement and Rs. 36-15-3 and Rs. 36-3-9 for April 23 settlement.

Gold worth Rs. 12,589,298 was exported from Bombay during the week ended March 9 by s.s. *Rajputana,* besides sovereigns worth Rs. 1,724,121.

The total value of gold exported from Bombay since Britain went off the gold standard is Rs. 2,238,583,141.

Total exports from United Kingdom during the week ending March 1, 1935, amounted to £4,543,000, of which £2,561,000 was shipped to the United States and £1,820,000 to France. Total imports during the same week amounted to £2,398,000, to which India contributed £837,000 and Africa £686,000.

Soviet gold production in 1934 amounted to 4,681,600 oz., an increase of 50 per cent. compared with 1933. Russia at this rate will soon be second among gold producing countries.

LONDON—Air Mail Week.

The Bank of England gold reserve against notes amounted to £192,498,539 on the 20th February as compared with £192,434,126 on the previous Wednesday.

Dealings in gold still continue on a comparatively moderate scale, a total of approximately £1,400,000 having changed hands during the week at the "fixing." Although the premium over the gold exchange parities has ruled somewhat lower, the weakness of sterling caused prices to rise considerably and fresh record prices were established, the highest to date being the quotation of 143s./11½d.

SILVER

Calcutta, March 13.

The strong tendency in all foreign markets was taken as an indication of a further advance in rates : but the week-end tone in Bombay was the reverse. Considerable realising took place, showing ultra-cautiousness on the part of the bull operators.

The spot rate in London on March 7 improved by 7/16d. to 27¼ and in New York by ¾ c. to 58-3/8. The March rate in Montreal went up 50 points to 59.50, while Shanghai T. T. on London opened firm at 1-7 4/16.

Buying from China was strong on the London Metal Exchange at the week end. There is a rumour in financial circles that China is preparing to abandon the silver standard pegging the Chinese dollar about 1—4 to 1—5.

Trading for the first settlement commenced in Bombay on March 8 at Rs. 72-13, which was raised to Rs. 12-15 by heavy buying. Later a quiet tone prevailed and the market closed at Rs. 65-3-6 Ready : first settlement Rs. 72-8-6 and second settlement Rs. 72-13-6.

Total exports from United Kingdom during the week ending March 1, 1935 amounted to £415,000, of which £410,000 was shipped to United States. Total imports during the same week amounted to £412,000, of which £230,000 worth came from France.

London Air Mail week:

The market developed a very firm tone during the past week and prices made a considerable advance, to-day's quotations of 25 5/8d. and 25 3/4d. for cash and two months' delivery respectively being the highest recorded since April 1929.

Buying was general, but the Indian Bazaars and China were particularly prominent, demand from the latter quarter following an improvement in the Shanghai exchange due to heavy sales of gold currencies by speculators. There has been some buying by local speculators, but the rise in prices naturally attracted profit-taking.

Considerable purchases were made for the American Treasury during the earlier part of the week, but there was less inclination to give support at the higher levels.

The undertone remains firm, but it is possible that profit-taking sales might cause some reaction, although this may prove to be only temporary.

The following were the United Imports and Exports of Silver registered from mid-day on the 18th February to mid-day on the 25th February :—

Imports	£
British India	36,241

Stocks in Shanghai on the 23rd February consisted of about 12,000,000 ounces in sycee, 257,000,000 dollars and 45,500,000 ounces in bar silver, as compared with about 13,700,000 ounces in sycee, 257,000,000 dollars and 45,200,000 ounces in bar silver on the 16th February.

SUGAR

Messrs. Bird & Co.'s Sugar Bulletin dated March 9, 1935, states :—

Prices for Java white at importing centres closed as under :—

Calcutta	9 7 0	9 8 0
Bombay	9 13 0	9 15 0
Jamnagar	9 7 0	9 7 6
Bhavnagar	9 7 0	9 7 6
Karachi	9 13 0	9 13 0

Calcutta

The Java sugar market in Calcutta was further depressed on account of the weaker tendency of the Indian sugar market. Although prices were not fluctuating greatly, demand appeared to be decreasing gradually and it is anticipated that no appreciation in demand is likely to occur until the condition of the Indian sugar market is core settled.

It is reported that a few importers and holders, although willing to liquidate at below cost, have not met with any success on account of the lack of buying interest and this is likely to continue until something definite is known with regard to Java's policy as a result of the Budget announcement.

Condition in the Indian sugar market, also, are reported to be weak and values declining on account of factories insistance on despatching instruction. Continued lack of demand is responsible for the downward trend of prices and consuming centres are said to be still heavily stocked and in consequence the existing inactivity is likely to continue for some time.

Bombay

The Java sugar market during the week under review has, remained quiet, which is due to the heavy stock position both for Java and Indian sugars.

Added to the heavy arrivals of Indian sugars it is reported that a quantity of approximately 15,000 bags Java has been discharged at this port and unless the offtake shows an improvement, no change in market conditions is expected.

As regards Indian sugars the daily arrivals added to the previous stocks are having a further depressing influence on prices but it is expected that despatches to this port may stop shortly on account of the higher prices now being demanded by factories.

Jamnagar and Bhavnagar

Conditions in the Jamnagar sugar market during the early part of the week were reported to be quiet but later advices showed that the market was firming up. It is reported that although business for a fair quantity was booked the stock is still very heavy and will remain so until offtake increases considerably. Arrivals are reported to be 20,000 bags per S.S. *RAJPUT* and inclusive of this, stocks are estimated at 1,50,000 bags.

W. G. GROUNDWATER,

General Manager.

On account of the marriage of H. H. the Jam Sahib all merchants and importers are reported to have suspended business until the 11th inst. when the festivities will come to an end.

Conditions in the Bhavnagar market were also quiet. The previous heavy stocks of about 85,000 bags are said to have been augmented this week by a further 30,000 bags.

Delhi and the Punjab

Delhi and surrounding markets remained quiet during the week under review resulting in prices showing a decline of about -/1/6 per Md. This discount in values is due partly to the pressure put on dealers for despatching instructions and partly to holders having to liquidate their commitments for reasons of finance.

The only interest displayed by the dealers is for forward positions at lower rates, but business in most cases has remained impossible on account of the firm attitude of sellers. Daily offtake is reported to have increased on account of the marriage season.

Further North the conditions are reported to be the same with more interest being displayed in forward positions without any business passing due to buyers ideas being below those of manufacturers.

Karachi

The market for Java white at Karachi remained steady during the week on account of the low stocks which are estimated at between 4,000 to 5,000 bags. This steadiness was however short lived, as two parcels of 10,000 bags British were unwilling to enter into further commitments due to the general lack of demand.

Unsold parcels are still being sent to this port and the arrivals have so far been disposed of at about Rs. 3/- to Rs. 4/- per bag lower than Java sugar.

Cawnpore

Market conditions during the week under review remained the same as last week. The expected reduction in values after the Budget announcecent did not materialise as most of the dealers were unwilling to reduce their limits, with the exception of a few who were forced to liquidate in order to comply with the demand for despatching instructions. The small rebuying activity shown by a few factories had also a slightly stimulating effect on prices and helped to keep these firm.

General

We have recently been advised that NIVAS placed her limits on the London Terminal market and it is possible that coincidence is to blame in that her prices were also raised for the West coast of India before the Budget announcement. If this is so there should be no reduction in Java's selling limits unless the London Terminal market shows a decline.

TEA

Calcutta, March 13.

The last of the season's sales on March 11 was a small one, the catalogue totalling only about 800 packages for export and 3,500 packages for internal consumption, of which 1,000 packages were Dust.

Prices showed little variation, except for local consumption offerings which developed a strong tone. Broken and leaf grades and Dust were firm at 3 pies dearer.

At the London auctions on March 11, 26,200 packages of Indian tea were submitted for sale.

There was a fair demand for the offerings. Common sorts displayed irregularity, but other descriptions sold well.

The following were the lowest prices fetched during the day's auction :—

	Last auction. per lb.	To-day's auction. per lb.
Common Pekoe	9 3/4d.	9 3/4d.

MISCELLANEOUS

WHEAT

Calcutta, March 13.

The market is awaiting Government's decision as to the continuation of the import duty of Rs. 2 per cwt. which is due to lapse on March 31. The trade has been pressing on Government the necessity of extending the operation of the duty by a year. The point is that the ruling rate of 24/3 shillings per quarter of Australian wheat works out to roughly Rs. 3-8-0 to Rs. 3-10-6 per cwt. C. I. F. India. The ruling rate in Bombay is Rs. 4-4-0 per cwt.: so if the duty is removed Australian wheat will be sold greaty in this country or else Indian prices will immediately slump to the extent of Rs. 0-8-0 per cwt. In view of the approaching harvest such a decline would be ruinous.

Fluctuations were the feature last week. An advance of eight annas in price at Karachi was lost at the week end on March liquidation and easier Punjab. The highest rate for July contract touched Rs. 22-10-0 and the lowest Rs. 21-7-3.

Spot Karachi sales for the week totalled about 20,000 bags bought by local mills. Pending the Government decision on the import duty and the impending crop trading is inclined to be nominal.

Calcutta, 6th March, 1935.

STATISTICAL INFORMATION

FIRST MEMORANDUM ON THE PRODUCTION OF SUGER

According to the first memorandum on the production of sugar directly from cane, prepared by the Sugar Technologist to the Imperial Council of Agriculture, the total quantity of cane which will be crushed in modern factories in India during the season 1934-35 is estimated at 6,850,000 tons as against the actual figure of 5,157,373 tons in season 1933-34. The total production of sugar is estimated at 580,000 tons as against the actual figure of 453,965 tons in the previous season. The total number of factories working in 1934-35 is reported to be 142 as against 115 in 1933-34. The quantities of cane crushed and sugar produced show a proportionately larger increase than the number of factories as several factories have increased their capacities by making substantial additions to plant and also as some of the new factories which worked for only a short period during 1933-34 will work for the full season during 1934-35. According to the forecast published in July last the production of sugar (from cane and *gur*) during the cane crushing season 1934-35 was estimated at 687,000 tons. Allowing 40,000 tons for production of sugar from *gur* in 1935, the present forecast places the total production from cane and *gur* at 630,000 tons. The reduction, amounting to 57,000 tons, is due to the cane having been affected by adverse weather conditions, floods, pests and frost in several areas.

INDIAN GROUNDNUTS.

The final memorandum on the groundnut crop of 1934-35 estimates a total yield of 1,869,000 tons of nuts in shell as against 3,330,000 tons last year, or a decrease of 44 per cent. Madras, which has far and away the biggest interest of any province in India in groundnuts, will have an yield this year of only 893,000 tons as against 1,177,000 tons in the preceding year. In the Bombay Presidency the yield will be 545,000 tons, a decrease of 40 per cent. as compared with last year.

IRON & STEEL PRODUCTION.

The total approximate production of iron and steel at the Tata's Steel Works at Jamshedpur during February was :—

Pig Iron	70,780 tons.
Steel Ingots	70,800 ,,
Finished Steel	46,200 ,,

RAILWAY TRAFFIC

LATEST EARNINGS AND WORKING EXPENSES

The total approximate gross earnings of all State-owned railways for the week ending 9th February, 1935 (45th week), amount to Rs. 192 lakhs, Rs. 11 lakhs less than the figures for the preceding week and Rs. 9 lakhs less than the actuals for the corresponding week of the previous year and Rs. 7 lakhs more than the actuals for the corresponding week of 1932-33.

The total approximate gross earnings from 1st April, 1934, to 9th February, 1935, amount to Rs. 76.24 crores or Rs. 332 lakhs more than the actuals for the corresponding period of the previous year and Rs. 509 lakhs more than the actuals for the corresponding period of 1932-33.

The following are the up-to-date approximate gross earnings and working expenses of the State-owned railways from 1st April, 1934, as compared with the actuals of the corresponding period of last year :—

Railways.	Gross Earnings.		Ordinary Working Expenses*	
	Up to 9-2-34 (in lakhs)	Up to 9-2-35 (in lakhs)	Up to 31-12-33 (in lakhs)	Up to 31-12-34 (in lakhs)
A. B. ...	134	155	79	84
B. N. ...	626	675	353	372
B. B. & C. I. ...	891	937	388	393
Burma ...	293	307	167	165
E. B. ...	436	454	241	246
E. I. ...	1,482	1,587	665	671
G. I. P. ...	1,022	1,013	508	509
M. & S. M. ...	583	578	247	247
N. W. ...	1,200	1,271	653	667
S. I. ...	442	454	199	200
Tirhoot & Lucknow ...	150	156	44	47
Barilly & Other Railways	33	37	17	18
Total ...	7,292	7,624	3,561	3,619

* Includes suspense but excludes appropriation to and from Depreciation Fund.

A comparison with the figures of the previous week for the principal State-owned railways shows Decreases in the approximate gross earnings of all railways except the Burma, M. & S. M.; S. I. and Tirhoot and Lucknow-Bareilly. A comparison with the actuals of the corresponding week of 1934 shows Decreases in the approximate gross earnings of all the principal State-owned railways except the B. N., E. B., S. I. and Tirhoot and Lucknow-Bareilly.

WAGON LOADINGS.

Comparisons of figures of wagon loadings on Class I Railways for the week ending 9th February, 1935, and for the cumulative period from 1st April, 1934, to 9th February, 1935, with the corresponding periods of the previous year are as follows :—

During the week ending 9th February, 1935, there were loaded on the broad gauge 87,034 wagons, being 5,646 fewer than in the corresponding week of the previous year, or a decrease of 6.09 per cent. On the metre gauge there were loaded 65,538 wagons, being 8,873 more than in the corresponding week of the previous year, or an increase of 15.7 per cent.

For the period from 1st April, 1934, to 9th February, 1935, there were loaded on the broad gauge 3,543,252 wagons, being 212,137 more than in the corresponding period of the previous year, or an increase of 6.37 per cent., and on the metre gauge 2,234,319 wagons, being 133,064 more than in the corresponding period of the previous year, or an increase of 6.33 per cent.

INDIAN RICE CROP.

The total yield of the Indian rice crop is estimated in the final memorandum at 29,830,000 tons as against 30,863,000 tons in 1933-34. The decrease is 3 per cent. in yield and 2 per cent. in area.

Investor's Supplement

Vol. XV. No. 14 THURSDAY, MARCH 14, 1935 Price Re. 1

CLIVE STREET FINANCE SOUND BUT NOT CORRECT

It is a common charge that, in the generality of cases, Bombay cotton mills, in extravagant dividend distribution, frittered their profits of prosperous days and that this is the main reason why they were specially unfitted and incapacitated to meet the depression.

There is a great deal of force and truth in this charge. The Bombay mills exploited the present and debilitated the future.

We venture to bring a no less grave charge against the Calcutta companies that, by stingy dividend distribution and by extravagant allocations to depreciation and reserve, they deprive the present shareholders of their just dues. They seek to benefit the future generation of shareholders at the heavy sacrifice of the present.

What is needed is a sense of proportion—a balanced plan of action.

We may give off hand, a few instances. The block of Gourepore, which owns 1392 looms, stands in the books at Rs. 4.85 lakhs. The original block cost Rs. 1,61.25 lakhs. The depreciation provided from balance-sheets is the stupendous sum of Rs. 1,56.39 lakhs.

Kinnison, whose loomage is 1,250 and whose gross block value is Rs. 97.61 lakhs, has a present book value of Rs. 17.72 lakhs.

Northbrook's original block is Rs. 46.52 lakhs and net block is Rs. 10.87 lakhs. Looms are 567.

"Watch-dog" furnished, last week, the following table in regard to Kumardhubi Fireclay and Silica Works:—

Description		Gross Block	Book Value
Land	...	94,060	15,000
Machinery	...	9,22,091	1,00,000
Buildings	...	10,60,143	2,65,000
Kilns	...	4,66,652	30,000
Siding	...	16,689	100
Tramway	...	3,026	nil
Furniture	...	31,428	500
Electric plant	...	20,754	2,900
Live stock	...	650	nil
Pipe line	...	16,578	500
Total	...	25,75,072	4,14,500

Fancy machinery of over Rs. 9 lakhs being written down to Rs. 1 lakh ; Kilns of over Rs. 4½ lakhs to Rs. 30,000; railway siding to Rs. 100! This is depreciating with a vengeance.

Bisra Stone Lime Company spent Rs. 4.91 lakhs on block which is to-day Rs. 2.00 lakhs ; machinery and plant cost Rs. 3.53 lakhs and is to-day a bare Rs. 15,000 in the books. Buildings are written down from Rs. 5.62 lakhs to Rs. 20,000. Tram line costing nearly Rs. 3 lakhs has a net value of Rs. 5,000. Motor cars were bought for a gross value of Rs. 43,958 ; and its present value of Rs. 500 is much more than the value of scrap. Rolling stock at original cost of Rs. 1.32 lakhs is down to Rs. 3,000. Kilns at Rs. 5.88 lakhs are no more than Rs. 1,000. Is this not depreciation run mad?

India Paper and Pulp passed over dividends because it diverted current profits to the building of the Bamboo plant. Spending current revenue on capital works is the essence of unsound finance.

Our readers will remember the case of Begg Sutherland's sugar companies in which, in one half-year, the entire damages of the Bihar Earthquake were written off, that is to say, in the same account in which, we were told, the Government have been approached for help from Earthquake Relief Funds.

As between the Bombay tradition and Calcutta tradition, there can be no doubt that the financial policy of the Eastern Capital is the sounder and better. But this does not prove that the practice pursued here is correct.

This policy is sound in that the structure of the Company in question is made all the stronger. But the policy is wrong in that the structure is made far too strong for requirements.

He is not a good architect who, to make doubly sure, uses a beam of ten ton steel where seven ton steel was required.

In any case, the past reserve and depreciation policy has resulted in the book value of the blocks of Calcutta companies appearing in the current accounts at ridiculously low figures and in the accummulation of liquid resources far in excess of every imaginable contingency ; and the time has come when the further continuance of this policy must be reconsidered.

We suggest that in the case of companies where depreciation allocations of the past years have brought the book value to much less than a "true and correct view" of the Company's property, no further depreciation should be set aside. Nor should any allocation be made to General Reserve.

The only allocation that will be justifiable is the creation and reasonable accummulation of "Dividend Equalisation Fund."

Dividends in the case of Calcutta companies are jumpy. Take the following record of Fort Gloster:—

March	1934	25
Septr.	,, ...	30

If, instead of swelling unwanted reserves and depreciating block to unjustified levels, the Company had built up and utilised the Dividend Equalisation Fund, the violent vacillations in dividend distribution could have been avoided.

Or take the case of Bisra Lime. Since March 1930, the dividends were in successive half years 60 per cent., 45 per cent., 40 per cent., 40 per cent., 30 per cent., 30 per cent., 30 per cent., 40 per cent., 40 per cent., and 50 per cent.

Calcutta companies have, be it said to their credit, built up their financial structure as prudently and as cautiously as has been built the structure of the premier type of financial institution, the banks. Let them, also, follow a like dividend policy. Banks do not have jumpy dividends. They use their inner reserves for an even and steady dividend distribution from year to year. Let Calcutta companies create and press to service the Dividend Equalisation Fund towards the same end.

We appeal to Calcutta managing agents to give careful thought to the arguments we have adduced and to the suggestions we have made. We should like one or more of our prominent Clive Street leaders to discuss these issues in the speeches they will make as Chairmen at the general meetings of companies.

We hope that our business magnates will not, copying the example of the bureaucrats in the Government, affect lofty superiority to suggestions which, in our view, are apt to the occasion and valuable for the future of joint stock enterprise in this presidency.

Worth-While Investments :

INDIA :

GILTEDGE IN MORE THAN ONE SENSE

CHAMPDANY AND FORT WILLIAM

By "Watch-dog".

In the last issue, I suggested that, in the current dull phase of jute mill share values, the prudent investor should find a good opportunity for picking up shares at what might turn out to be bargain prices.

I shall not tire of repeating that there is hardly any industry in India (or elsewhere in the world) which can compare with Clive Street jute mills in point of impregnable financial position and in point of well-knit organisation for manufacture, purchase of raw material and sale of finished products.

Looking at current prices, I am inclined to recommend the shares of Champdany Jute Company. The position is extremely satisfactory from every point of view.

The Managing Agents are James Finlays ; and they have, deservedly, eearned high repute for prudent and efficient management.

The capital of the Company is Rs. 59.16 lakhs in ordinary shares of Rs. 100 each. There are no preference shares nor debentures.

In owning the entire capital in the form of ordinary shares, the structure of Champdany is somewhat different from most jute mills which have their capital made up partly of preference shares and partly of ordinary shares. When the industry is prosperous, the latter type of capital plan makes ordinary shares comparatively more attractive.

If the planning of capital exclusively in the form of ordinary shares is to be deemed rather defective, the position in this regard is more than offset by the fact that Champdany has free and unpledged reserves in Government securities for an amount nearly equal to the paid-up capital. The income from this source should be in excess of Rs. 2 lakhs per annum. There is the minimum investment income in addition to trading profits.

As I have stated, the capital is Rs. 59.16 lakhs. Capital Reserve is Rs. 75.71 lakhs ; General Reserve is Rs. 8.50 lakhs. Sundry liabilities (including the amount that had to be paid for dividends) amount to Rs. 9¼ lakhs. The Company has not taken any secured or unsecured loan for the financing of stocks.

The total cost of block is Rs. 138.64 lakhs ; its present book value is Rs. 66.03 lakhs. For a mill having 1340 looms (748 hessian and 556 sacking) this book value s an undtr-estimate.

Stocks and stores are Rs. 31 lakhs. Book debts etc., are Rs. 3.66 lakhs.

Giltedge holdings come to Rs. 53.59 lakhs. There is, through appreciation, a hidden profit of Rs. 2 lakhs in the giltedge portfolio. Cash is Rs. ¼ lakh.

Net liquid assets are, therefore, Rs. 79¼ lakhs —that is, they exceed the capital by 35 per cent. In this regard, Champdany has an almost unrivalled position. I must add, however, that this is a factor on which I will have to direct my criticism in a later portion of this analysis.

The profit for the half-year ended September 30, 1934, was Rs. 6.70 lakhs. The sum set apart for depreciation was Rs. 2.28 lakhs. In the balance sheet for March 31, 1934, the depreciation allocation was Rs. 1.52 lakhs ; in September 30, 1933, it was Rs. 1.51 lakhs ; in March 31, 1933, it was Rs. 2.27 lakhs ; in the two earlier balance sheets, it was roundabout Rs. 2¼ lakhs. It will thus be seen that the provision for depreciation, after remaining at Rs. 1½ lakhs for two half-year accounts, has again been increased to Rs. 2¼ lakhs. The block is so well-depreciated that the resumption of the extra Rs. ¾ lakh was hardly necessary. I would go so far as to say that it was uncalled for.

To return to the profit and loss accounts. After depreciation and after adding the carry-forward, the divisible surplus came to Rs. 4.86 lakhs. From which, Rs. 1.20 lakhs was set aside for General Reserve Fund ; and dividend of Rs. 5 per share absorbed Rs. 2.96 lakhs.

While the increased provision for depreciation is uncalled for, the setting aside of Rs. 1.20 lakhs for Reserve is unjustified.

Net liquid assets are already unduly and disproportionately large at Rs. 80 lakhs. Giltedge securities are Rs. 53¼ lakhs. Further addition to reserve can only mean bulging giltedge portfolios. Is Champdany a jute manufacturing company, or a bank or an insurancy company?

The policy pursued by the Managing Agents and Directors in this regard is, in my view, indefensible. It only means denying to shareholders their just and full dues.

The current market rate of the shares is Rs. 207½. Rs. 5 per half-year on Rs. 207½ works out to an yield of 4.82 per cent. tax-free. This is quite a good return—especially when it is remembered that but for reserve and depreciation allocations which err on the side of extravagant caution.

The carry-forward to next account is increased by Rs. ¼ lakh.

The earning capacity of the Company is extremely favourable. It works out to Rs. 499 per loom per half-year—a result which brings the Champdany amongst the front rank in this regard.

The shares of Champdany are very much like giltedge in more than one sense. The entire paid-up capital is backed by giltedge holdings. And the reserves are so strong that, even if, on occasions, trading profits are adversely affected for reasons beyond the control of the Company or of the industry,

drawings on them would still leave the Company with ample resources for working capital.

Champdany is a favourite share with Bombay operators. And I know that it has been strongly recommended to London investors. There is, therefore, every chance of specially marked appreciation in Champdany shares as and when jute shares recover from the present listless market.

Fort William Jute Company, of which Kettlewell Bullens are managing agents, is a 1000-loom company with a small proportion of ordinary capital and with resultant increased prospects of capital appreciation for its ordinary shares.

Fort William is an extra-ordinarily natty show; and investors will do well to purchase its shares at every favourable opportunity.

Its capital is Rs. 10 lakhs in 7 per cent. (tax free) preference shares of Rs. 100 each; and Rs. 14 lakhs ordinary shares of Rs. 100 each. Reserve Fund stands at Rs. 16.79 lakhs.

Sundry liabilities are only Rs. 2¾ lakhs.

Gross block is Rs. 50.50 lakhs; and the net block is Rs. 19.34 lakhs. The future provision for depreciation must, therefore, be on the small side.

Stocks are Rs. 12.38 lakhs; book debts are Rs. 1¼ lakhs. Cash and investments amounts to Rs. 12 lakhs.

Liquid assets are thus Rs. 22¾ lakhs. The entire working capital is provided without recourse to any borrowing; on the top of it, cash and giltedge are Rs. 12 lakhs.

The profits for the half-year ended September 30, 1934 were Rs. 2.52 lakhs. Depreciation was Rs. 50,000. Preference dividend absorbed Rs. 35,000; and ordinary shares received Rs. 7-8 per share and required Rs. 1.05 lakhs.

A half-yearly dividend of Rs. 7-8 on a 100-rupee share quoting Rs. 406 gives an yield of 3.7 per cent. per annum tax-free.

The profit per loom in the last balance sheet worked out to Rs. 200. There is every prospect of better results. Which is another way of saying that the yield per share should show improvement.

The balance sheet of Fort William is as neat and clean as one would like to see; and at four times the paid-up capital, the market quotation has not the top-heavy appearance which some other shares quoting several times their normal value have.

INVESTMENT BREVITIES

The equity shares of Bisra Stone Lime Company (Bird and Company—Managing Agents) are an extremely attractive proposition. A ten-rupee share is quoting Rs. 57½. On the basis of the last half-year's dividend, the yield works out to 8.7 per cent. tax-free. The reserves are, as usual with Calcutta Companies, surpassingly strong. If shares are obtainable at the current quotation, buy as many as you can get. I hope to analyse the balance-sheet in detail in a subsequent issue.

* * *

I recommended the Kumardhubi Fireclay last week. We had two or three telephone calls from readers who, on this tip, wanted to buy these shares but complained that they could not get any in the market. Increase your bid and make another try. You wont lose by increasing the bid.

* * *

Reliance Firebrick has gone up to Rs. 10½. Further rise is on the cards.

* * *

Giltedge has again receded. No wonder. The 'morale' of the market is knocked to pieces. There is far too much floating scrip of 3½ per cent Paper in the Stock exchanges of Calcutta, Bombay, and Madras. Unless the Government and the Imperial Bank buy up 3½ per cent Paper for, say, a crore, there can hardly be any recovery worth mention. On the other hand, every bearish news will have exaggerated effect. Frankly, I do not like the look of things.

* * *

I must repeat, 3½ per cent Paper is now the dominant stock. Its weakness spells weakness not only in share markets but even in commodity markets. It has come to exercise a great and unique psychological influence on the minds of market operators. Tone up 3½ per cent Paper; and you can tone up all the markets.

* * *

What is Mr. Lamond doing? He has a good chance of picking up, at cheap rates, the scrips he sold two months ago. Why does he not do it? Incidentally he will earn the gratitude of all the markets for an operation which will impress everyone as a well-timed and business-like deal. He has yet to produce his first impression on the market. Here is an ideal opportunity to make the best possible first impression.

Worth-While Investments:

BRITAIN:

COURTAULDS, LIMITED

By R. Gordon Cummings

Registered in 1913 to develop the production of artificial silk, Courtaulds had to fight against considerable prejudice and technical difficulties before the faith of the founders was justified. At the present time the company is the largest manufacturer of artificial silk in the world. In addition to its widespread interests in Great Britain, it has agreements with holdings in various continental artificial silk manufacturing companies, and controls American Viscose Corporation, the biggest producer in America.

Not unnaturally the capital has expanded considerably, the present authorised and issued amount of £32,000,000 comparing with only £2,500,000 in 1919. Most of this increase, however, has arisen from the issue of capital bonuses to ordinary shareholders, the latest allotments in this respect being 66 2/3% in preference shares during 1924 and 100% in ordinary shares during 1928, these two bonuses involving the issue of 8,000,000 preference and 12,000,000 ordinary shares respectively. The present issued capital comprises 8,000,000 5% cumulative preference and 24,000,000 ordinary shares, both of £1 each. There are no debentures or mortgages outstanding. Preference dividends are paid on 1 January and 1 July, while an interim dividend is paid on the ordinary capital in August, and the final distribution in March.

As shewn by the following table, profits were exceptionally good up to 1928, but following the commencement of the industrial depression steady declines were shown during the three years ended 1931. Since then, however, recovery has taken place. Profits for the ten years to 31 December, 1934, together with the allocations were as under:—

	Net Profit after Tax.	Pref. Div.	Ordinary percentage Tax free Earned.	Paid.	To Reserve.
	£	£			£
1925	4,411,413	4,011,413	33.4	25	1,000,000
1926	3,840,791	3,440,791	28.7	22½	750,000
1927	4,585,921	4,185,921	34.9	B. 25	1,000,000
1928	5,171,997	4,771,997	19.9	15	1,000,000
1929	3,743,828	3,343,828	13.9	10	C. 1,651,856
1930	2,274,409	1,874,409	7.8	6	C. 925,339
1931	1,101,588	701,588	2.9	5	D.
1932	1,659,051	1,259,051	5.2	4	C. 207,007
1933	A. 2,552,051	2,152,051	9.0	6	700,000
1934	2,217,790	1,817,790	7.6	7½	Nil.

A. Including about £500,000 profits on exchange.
B. Plus 100% capital bonus in ordinary shares.
C. Written off Continental Industrial Investments.
D. £450,000 transferred from contingencies reserve to P. and L. a/c., and £700,000 taken from general reserve and £300,000 from capital reserve to write down foreign interests.

It should be noted that only in one year—1931—was the ordinary dividend not earned. As regards the apparent decline in the 1934 profits, strict comparison is not possible as the 1933 figure included profits of about £500,000 on exchange transactions. Excluding this amount, the 1933 comparable profits were only £2,052,000. Hence, the 1934 earnings show an increase of around £165,000.

Disclosed profits do not unfortunately give a true picture of the earnings of the whole group as dividends received on subsidiary investments only are included, profits not distributed by these concerns being carried forward to their reserve accounts. On the other hand losses incurred by any of the subsidiaries are allowed for in estimating the value of the investments therein.

Courtaulds balance-sheet has always been remarkable for its strength, particularly in the liquid sense. Figures for the two years ending 31 December 1934 are summarised hereunder:—

Assets—	1934.	1933.
	£	£
Properties, Plant, etc. ...	*6,118,896	5,281,893
Subsidiaries—Investments ...	17,942,484	17,630,128
Industrial Cos.—Investments and Advances ...	1,599,916	2,290,400
Liquid Assets ...	21,793,103	18,895,899
	47,454,399	44,098,320

*Total expenditure 1913 to date £15,232,292 (1933, £13,845,220), less depreciation, etc. reserves, £9,113,396 (1933, £8,563,327).

Liabilities—	1934.	1933.
	£	£
Capital, Issued ...	32,000,000	32,000,000
Reserves—General ...	9,000,000	6,000,000
Insurance, etc. ...	2,262,641	2,404,727
P. & L. Balance ...	269,228	251,438
	47,454,399	44,098,320

Dealing with the individual items in the 1934 balance-sheet, fixed assets stand at only about 40% of their original cost. During the past year almost £1,400,000 was expended on properties, machinery, etc., but against this depreciation of £550,000 was written off. For a number of years up to 1929 net increases were shown in fixed assets, but in the four years to 1933 decreases were disclosed owing to a curtailment of expansion.

While the directors do not give any estimate of the true value of investments in subsidiary companies, it can safely be assumed that the actual worth is considerably in excess of the balance-sheet figure. In fact, it has been estimated that the value of the interest in American Viscose is greater than the total balance-sheet value of these investments. No information is given on the value of interests in industrial companies. It is worth while mentioning, however, that a sum of almost £3,800,000 has been written off these two items since 1929.

Turning to the liquid assets, opportunity was taken during 1934 of realising certain investments with the result that a capital profit of £3,901,840 was made. Of the latter amount, £3,000,000 was added to general reserve and the balance of £901,840 was deducted as a special reserve from the book value of British Government and other marketable investments. At 31 December last the market value of these holdings was £20,256,858, or £2,202,088 in excess of the net balance-sheet figure.

Excluding the unrealised surplus on investments, the surplus of liquid assets over all liabilities was practically £18,000,000 at the last year end. As regards reserves and undistributed profits, these now total £13,733,957, including the unrealised investment surplus, but excluding any appreciation in the value of subsidiary and industrial investments.

The report for 1934 states that business in England continued to improve during 1934 and the output of 17½% more than in 1933 was entirely sold. Development of rayon staple fibre for the use of the spinning industry is proceeding and a new factory having a capacity of over 20,000,000 lbs. per annum is being erected.

In the case of foreign interests, Courtaulds and a French concern, have formed a new company to develop jointly the manufacture of transparent paper for English markets. In the U.S.A. conditions were very difficult until towards the end of 1934. The American Viscose Corporation is now, however, selling the whole of its output, while price cuts have been partially restored. The Canadian company is doing well, but unfortunately the interests in Germany and France are not showing much improvement.

Elsewhere figures of the Rayon production for January are given. The outlook for this industry is increasingly bright and at 51s. Courtaulds £1 ordinary shares are one of the most promising industrial investments. At this price the yield is 3.8% gross, a yield which compares favourably with that indicated on many other industrial shares. Market interests expect that the 1935 profits will be sufficient to pay a 10% tax free dividend. Bearing in mind that the ordinary shares were as high as 104s. in 1929, there is obvious scope for capital appreciation to well over 60s. In 1934 preference dividends, requiring £400,000, were covered over 5½ times. At 26s. the £1 shares yield practially 3.9%.

THE SATPUKURIA AND ASANSOL COLLIERIES, LD.

NOTICE

is hereby given that the Fifty-Fourth Half-yealry Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Saturday, the 30th day of March, 1935, at 12-30 p.m., for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 31st December, 1934 and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 23rd to the 30th March, 1935, both days inclusive.

By order of the Board,
MARTIN & CO.,
Managing Agents.

CALCUTTA,

INDUSTRIAL INVESTMENT TRUST

Sir KIKABHAI PREMCHAND—AN OPTIMIST

WELL—BALANCED PORTFOLIO

At the Annual Meeting of the Industrial Investment Trust, Sir Kikabhai Premchand, the Chairman, delivered the following speech.

Gentlemen,

The Report and Accounts have been in your hands for some time, and, with your permission, I shall take them as read.

Since the First Annual General Meeting, the Issued Capital has been increased to one Crore.

Whilst the Accounts cover a little more than a year, the Subscribed and Called up Capital was available for only a portion thereof. The results therefore, I hope you will agree, are not unsatisfactory.

The net profit, after allowing for all expenses, was Rs. 1,95,498-4-2. After extinguishing all preliminary expenses, making partial provision for formation expenses and transferring Rs. 70,000 to Reserve, there was left a surplus of Rs. 77,956-15-2.

After full consideration, your Directors have decided to carry this sum forward.

The total of preliminary and flotation expenses represent little over one per cent. of the Capital Subscribed which,you will agree, is a modest ratio. The established practice in London where similar Trusts have grown to gigantic proportions is that administration charges are approximately one-half of one per cent. of the Subscribed Capital. Though, in the initial year, the charges are necessarily heavy in our case, it is not more than one-quarter of one per cent. This is due to the Company's administration having been carried on with insufficient staff for the time being.

As you are aware, the Trust was floated at a time when Finance and Industry were slowly emerging from the depths of depression and the Directors were consequently able to invest the funds on advantageous terms. As you will see from the list of Securities, each holder of a share is a co-partner in over 110 investments and the analysis of these invesments also shows that the risk is distributed over well-balanced classes of shares and gilt-edged securities.

Whilst our main field of investment is in India, there is a modest holding of good sterling scrips.

Under the Articles, not more than five per cent. of the Subscribed Capital can be invested in any single security other than a Trustee Security and that provision has been rigidly observed.

Further, as a matter of policy, no investments have been made outside the British Empire though the field was attractive. So long as currency uncertainties continue, the Directors do not intend widening their field of investments.

You will ask me what of the future, and whether there is any intention of making further calls. I would invite your attention to the field available for investment. There is a glut of money in India, as elsewhere, seeking employment. Banking money is cheap, and so long as this sort of finance is available, we propose to utilise the same for additional investment, if they offer. If, on the other hand, monetary conditions change, it would not be good business to continue borrowing temporary funds and due notice will be given to you all.

Personally, I am an optimist; the general trade cycle has turned upward and there are good omens that recovery is returning, and trade and Industry are steadily but surely reviving.

Indian Trade and Commerce are gradually improving and seem to have taken a definite turn for the beter. The corner now having been turned it is confidently hoped that, before the year is out, Government will find means to give the much-needed relief in taxation on incomes by the complete removal of surcharge and, at the same time, adopt beneficial measures for the speedy industrial advancement of the country by removing excise duties on the new and growing indigenous Industries.

If we take a reasoned view of the situation, it seems probable that the current year will prove more propitious than 1934 and the coming years will witness as high a level of production and average prosperity as in the pre-depression days.

INVESTMENTS IN INDIA

THE INVESTOR'S INDIA YEAR-BOOK

is the recognized work on Investments in India. Condensed Balance Sheets and Analysis of Workings for recent years of—

Banks, Railways, Jute Companies, Coal Companies, Cotton Companies, Tea Companies (Northern India), and Miscellaneous Companies.

Also full particulars of—

Government of India Loans, Municipal and Provincial Loans, Straits Dollar Rubber Shares and Tin Mining Companies.

The 1934—35 Edition is now ready and includes Company Reports issued up to 31st December, 1934.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the Balance Sheet of Industrial Investment Trust Ltd., as at the 31st day of December, 1934, above set forth, and have obtained all the information and explanations we have required.

The above Balance Sheet exhibits a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the books of the Company, and in our opinion is drawn up in conformity with the law.

   - 3½ per cent. Government Paper.
   - 3 per cent. India Sterling Stock.

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

Wednesday Evening,

Calcutta, March 12, 1935

Owing to holidays intervening there were only three working days during the current week upon which to comment. On the whole, the tendency of the market is still hesitant and somewhat uncertain and in many instances the last week's recovery was not maintained. Government Securities were easier-on weaker advices from Bombay.

Jute Mills shares were below the best touched during the week-end. Cottons remained neglected while with the exception of one or two, coals showed no material change. Among miscellaneous Industrials, Iron and Steel issues were slightly better and Sugar shares were well supported.

Government Securities.—Ruled fairly steady during the early part of week and 3½ per cent rupee Paper was quoted up to Rs. 96-7 but as the session progressed the rate receded to Rs. 95-10 on weaker advices from Bombay. 3½ per cent. Loan 1947-50, however, kept steady at Rs. 102. 4 per cent. Loan 1960-70 is now quoted at Rs. 108-9 and 5 per cent. Loan 1945-55 at Rs. 116-12. Medium and short-dated loans remained unchanged at last levels. There was no change in the Imperial Bank rate of interest on demand loans.

A press communique issued this morning states that the sale of Treasury Bills is discontinued until further notice and all tenders for Treasury Bills received on Tuesday, the 12th March, 1935 were rejected. This, it is expected, will have a healthier effect on Government Securities. Toward the close 3½ per cent. Government Paper moved up to Rs. 96-2.

Fixed Interest Bearing Securities.—Rather less business was reported in Preference shares but rates on the whole remained unchanged. Among Jute Mills issues, Agarpara was dealt in at Rs. 135 and Hooghly at Rs. 20-2. Among others, British India Corporation Preferences advanced to Rs. 160 on the publication of its satisfactory report for the year ended 31st December 1934. Bengal Paper (7 per cent. Preference of Rs. 50 paid up) was marked at Rs. 70.

Only a very limited business was reported in Debentures. Calcutta Port Trust and Calcutta Municipal issues were mainly on offer without meeting with much response from buyers. Among Industrial issues, 6 per cent Associated Hotel's debentures changed hands at Rs. 104 ; 5½ per cent. Chowringhee Property Debenture at Rs. 99-4 and 8 per cent. Bharat Sugar at Rs. 103-12.

Other Investment Stocks.—Only a limited business was reported in Imperial Bank's shares. The fully paid up issues changed hands at Rs. 1,605 and contributories at Rs. 400. Central Bank's shares changed hands at Rs. 39-6 ex-dividend. A fair business was put through in Insurance companies shares. Triton Insurances were marked at Rs. 228 and at this price there are several buyers. National Insurance was dealt in at Rs. 1,300 from a quotation of Rs. 800 and thus marking a rise of 500 points. Saraswati Insurance came in for deal and changed hands at Rs. 15-12.

Only two deals were reported in Light Railways shares up to the time of writing. Ahmadpur-Kutwa recorded a deal at Rs. 93 and Buktiarpur Behar at Rs. 70. The demand for Government guaranteed Railways' shares continued as usual but scarcity of scrip accounted for the restricted turnover.

Among the transport companies' shares, Calcutta Landing and Shipping was dealt in at Rs. 15-8 ; Indian General Navigation and Railways (ordy.) after being marked at Rs. 118 were later dealt in at Rs. 115 and Port Shipping at Rs. 16-4.

Cottons.—Dull conditions continue to rule in this section and only a very small business was reported. Elgin Mills (ordy.) was dealt in at par, Kesoram (ordy.) reported a few deals round about Rs. 4-2 and a small lot of Muir Mills changed hands at Rs. 358.

Coals.—Apart from some enquiry for Rewa Coalfields' shares on the prospects of an improved dividend there was nothing of any interest reported in this section. The quotation of the above share was advanced to Rs. 14-12 from Rs. 13.

Amalgamated was marked at Rs. 22-12 ; Bengal at Rs. 274; Equitable at Rs. 36-10; Hurriladih at Rs. 16-8 and West Jamuria at Rs. 12-6. The reports and Accounts of the Companies under the Managing Agency of Messrs. Bird and Company and F. W. Heilgers and Company have been published and in the majority of instances the last distribution of dividends have been maintained.

Jute.—Jute Mills shares, on the whole, remained quietly steady although the improvement recorded during the last week-end have not been maintained. 9 Porters hessians are now quoted at Rs. 9-5 for ready and Raw Jute at Rs. 30-12. Howrahs after opening at Rs. 62-14 on Monday advanced to Rs. 63-4, but on Tuesday again receded to Rs. 62-11. Later on the market eased off further and Howrah are quoted at Rs. 62-8. Clive was marked at Rs. 36-8, Hukumchand at Rs. 15-6 and Nationals at Rs. 26-12.

Among higher priced stocks, Anglo-India advanced to Rs. 545 on Monday from a quotation of Rs. 530 but on Tuesday again receded to Rs. 533. Bally advanced to Rs. 261 but again receded to Rs. 255 ; Barnagore to Rs. 207 but was marked down to Rs. 200 ; Fort William to Rs. 404 but again came back to Rs. 390 ; Indian from a quotation of Rs. 490 changed hands at Rs. 478 ; Lansdownes, however, kept steady at Rs. 220.

Gondalpara declared a dividend of Rs. 60 per share of Rs. 300 paid up *i.e.* 20 per cent. per annum for the year ended December 31, 1934.

Towards the close, the market again rallied and Howrahs advanced to Rs. 62-14 and Kamarhattys to Rs. 622.

Electricals.—The enquiry for Public Utility Companies' shares was not so much in evidence as was the case quiet recently. Bareilly Electrics changed hands at Rs. 14-6 ; Benares Electrics at Rs. 15 ; Muttra at Rs. 10-12 ; Shajahanpore at Rs. 7-4 and United Provinces at Rs. 162.

Apart from the above, Bengal Telephone (ordy.) was dealt in at Rs. 18-6.

Engineering.—Enquiry was in evidence for the shares of Iron and Steel issues in general and Bengal Iron in particular owing to the blowing up of its blast furnace recently. Bengal Iron was quoted up to Rs. 4-8 and Indian Iron and Steel at Rs. 7-5. Marshalls recorded a deal at Rs. 1-6.

Sugars.—Sugar shares were well-supported. Balarampur moved up to Rs. 21-12 ; Buland changed hands at Rs. 13-4 ; Carew and Co. recorded a deal at Rs. 20-12, Cawnpore (ordy.) at Rs. 35-8, Purtabpore (ordy.) at Rs. 14-12 and Samastipore at Rs. 11-2.

Miscellaneous.—The enquiry for B. I. Corporation (ordy.) continued and business was reported up to Rs. 3-2. Reliance Firebricks also were in some demand and changed hands at Rs. 10-2.

Midnapore Zemindary (ordy.) advanced to Rs. 70 ; Indian Wood Products changed hands at Rs. 34-4 and British Ceylon Corporation (ordy.) at Rs. 10-12. Among Paper Mills shares, Indian Paper Pulp changed hands at Rs. 178 and Titaghur Paper (ordy.) at Rs. 20-12.

Tea.—Only two transactions were reported here up to time of writing. East India was quoted at Rs. 10 and a small lot of Gungarm at Rs. 281-8.

MADRAS STOCK EXCHANGE.

(By Wire)

FROM OUR CORRESPONDENT.

Madras, March 13, 1935.

Government Securities.—The Securities market continued to be erratic during the week under review. 3½ per cent. Paper touched Rs. 95-8 but recovered to Rs. 96-10 on better Sterling advices, and weakening again at the close to Rs. 95-12. It has been impossible to judge the course of the market. The enquiry for other securities either for short-dated, medium or long-dated has been negligible. Mysore and Cochin Loans continued dull without attracting any buying enquiry. There were heavy sellers in 4 per cent. Mysore Loan at Rs. 109-4.

Debentures.—There were no transactions in Municipal or Port Trust Debentures.

Fixed Interest Securities.—Among Joint Stock Company debentures, Cochin Malabars were again done at Rs. 104.

Preference share market was steady. Premier Hosiery preferences maintained their improved level of Rs. 11 whilst Tata Steel Second Preferences were firmer at Rs. 107-8.

Banks.—Bank shares were practically unchanged with the exception of Indian Banks and Indo Commercial Banks which were in keen demand Central Bank's shares were slightly easier at Rs. 40 ex-dividend.

Public Utilities.—Public Utilities were in good request. Bengal Telephones eased to Rs. 18-8 whilst Madras and Rangoon Telphones were firm at previous levels. Trichy-Srirangam Electrics and Vellore Electrics changed hands several times whilst West Coast Electrics were a popular feature.

Mills.—Cotton Mills were unsteady due to the erratic course in the prices of raw cotton. Buckingham and Carnatics lost two points and were done at Rs. 208 ex-dividend. Gokaks also weakened. Exceptionally Premier Hoseiry and Vasantas were taken off the market at last done prices, *viz.*, Par and Rs. 110 respectively.

Sugars.—This section was active. Deccans were wanted at Rs. 295 whilst Mysores were dealt in at Rs. 28-8 and India Sugars at Rs. 10-4.

BOMBAY STOCK EXCHANGE.

(By Wire)

(FROM OUR CORRESPONDENT)

Bombay, March 14, 1935.
Wednesday Evening,

Money.—Money fluctuated between 2½ to 3½ per cent. and closed at 2½ per cent.

Exchange.—Exchange has been quite at the close with Banks selling T. T. at 1s. 6 3/32d. for March, 1s. 6 1/16d. for April; 1s. 6 1/32d. for May-June; 1s. 6d. for July-December. Banks are buying 3 months bills at 1s. 6 3/16d.

Government Securities.—Paper market was easy owing to weakness of cotton though rallied slightly at close. 3½ per cent. Government Paper was done as low at Rs. 95, but closed at Rs. 96-1. 1941 closed at Rs. 100-12; 1947-50 at Rs. 101-14; 1943 at Rs. 105-12; 1960-70 at Rs. 108; 1955-60 at Rs. 115-2; 1935 at Rs. 100-14; 1939-44 at Rs. 108-2; 1940-43 at Rs. 108-2; 1938-40 at Rs. 108-6; 1945-55 at Rs. 116-11; Bombay Development at Rs. 101-14.

Share Market.—The shares' market closed for settlement and opened to-day. The market eased down on account of the break in cotton prices.

Textiles.—Phenominal fall in raw cotton prices has affected in all scrips and closed easier, with Bombay Dyeings at Rs. 912-8; Central India at Rs. 357-8; Century at Rs. 293-12; Colaba at Rs. 140; Gokak at Rs. 211-4; Kohinoor at Rs. 218-12 ex-dviidend; New Great Eastern at Rs. 167-8; Swadeshi at Rs. 218-12.

Iron and Steel.—Tata Ordinaries and Deferreds closed the lowest of the day with Ordinaries at Rs. 154-4 and Deferreds at Rs. 701-4. Second Preferences were steady at Rs. 172.

Hydro Electrics.—In this section, Tata Powers were hammered down to Rs. 1,675 and Andhras lower at Rs. 1,762-8 and Hydros at Rs. 176-14.

Miscellaneous.—Belapur Sugars were forging ahead to Rs. 374-6. Bombay Burmas were lower at Rs. 415; Bombay tram closed at Rs. 167-8; Telephone at Rs. 120; Bombay Steam at Rs. 305; Petrols lower at Rs. 3-10.

Banks and Insurances.—Imperial Bank's were lower with Fully paids at Rs. 1,600 and Partly paids at Rs. 397-8; Bank of Barodas closed at Rs. 102-8; Central at Rs. 39-4; Bank of India at Rs. 123-8 and Union at Rs. 6.

New India Assurance quoted Rs. 45; Oriental Rs. 4,750.

Our Special Cables from London and New York and Bombay share tables do not appear this week as we had to go to press on Wednesday.

LONDON STOCK EXCHANGE

During the brief period under review there has not been much of activity on the Stock Exchange and much the same conditions have prevailed. Gilt-edge was again dull and failed to attract any business. On Tuesday, 3½ per cent. 1931 was quoted at 95; 4½ per cent. 1958-68 at 117½; War Loan at 106.

Among other sections Home Rails were better, Southern Deferred and London Passengers registering some advances. Tea was unchanged and Rubbers which were depressed owing to the retaining of the existing percentage of production, improved with a rise in the price of the commodity. Industrials were better supported.

NEW YORK STOCK EXCHANGE

Wall Street closed heavy and lower on account of precipitous break in cotton.

Closing quotations:—

American Foreign Power Common	2⅛

NATIONAL FIRE & GENERAL INSURANCE CO., LD.

NOTICE is hereby given that the Third Annual General Meeting of Shareholders will be held at the Registered Office of the Company, No. 7, Council House Street, Calcutta, on 23rd March, 1935, at 2-30 p.m. to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ending 30th September, 1934.
2. To elect Directors in place of those who retire, under the provision of Article 87 of the Articles of Association but are eligible for re-election.
3. To elect Auditors and to fix their remuneration.
4. To transact any other business that may be brought before the Meeting by the Chairman.

The Transfer Books of the Company will be closed from the 18th March to 23rd March, 1935, both days inclusive.

By Order of the Board of Directors,

R. G. DAS & CO.,
Manager.

Calcutta, 9th March, 1935.

IMPROVED SENTIMENT IN THE EXCHANGE

UNCERTAIN BUDGET OUTLOOKS.

SPURT IN COURTAULDS.

By R. Gordon Cummings.

Special for "INDIAN FINANCE"

London, March 5th, 1935.

There has been a decided improvement in sentiment in the Stock Exchange during the past week. As yet, however, public interest has not expended to any great extent. Full confidence is by no means restored ; but the recovery in many shares indicates what a small amount of buying will have on market movements. Principal interest has been confined to mining markets.

Although good effect was produced by the weekly revenue returns, the rather uncertain Budget outlook has tended to offset any material gains. Gilt-edged stocks are, however, on the whole slightly higher than a week ago, while India issues are ½ to 1½ points up on satisfaction with the Budget surplus.

There has been little interest in foreign loans, but the Home railway market has seen marked revival after an earlier falling away in prices. The outlook is certainly more encouraging. *London Transport* C stock has been the strongest feature with a rise to 96. Amongst foreign rails Argentine issues have been favoured on the improvement in traffics following the better exchange outlook.

On cessation of recent liquidation a number of industrial shares have recovered part of their previous losses, although as pointed out above, business is still restricted. Towards the close iron, coal and steel issues have improved on the satisfactory *United Steel* and *Staveley Coal* interim dividends. The brightest feature has been renewed activity in *Courtaulds* following publication of the full report. Chief changes have been falls of 4s. 6d. to 70s. in *Triplex Glass,* 3s. 3d. to 105s. in *Woolworths,* and 1s. 9d. to 81s. 3d. in *London Brick.* Shares which have appreciated are *Courtaulds* to 51s., *Patrons and Baldwins* to 57s. 6d., *Boots Drug* to 49s. 3d., and *Distillers* to 93s.

The decline in *London Brick* was due to the rather indefinite forecast made by the Chairman at the meeting as to the outlook for 1933. Recovery in the price of the shares should soon take place.

As noted above, gold shares have received the greater part of public support and sharp rises are shown all round. *Johannesburg Consolidated Investment* are 78s., *Van Dyk.* 41s. 3d., *Venterspost* 19s., *Kentan* and *Klip Nigel* 9s. In West Africans *Ashanti* have risen to 58s. 9d., *Ariston* to 12s. and *Atta Gold* to 6s. 6d. As regards Australians, *Commonwealth Mining* are 13s. 3d. on some speculative selling.

Indian gold mining shares have continued in favour, *Champion Reef* being up to 41s., *Mysore* to 24s. 9d. and *Nundydroog* to 64s.

In base metals, coper shares have been the feature on optimistic hopes regarding the favourable outcome of the restriction discussions proceeding in New York. *Rhodesian Selection Trust* are higher at 9s., *Tanganyika* preference at 11s. 3d., and *Rio Tinto* at £15. Tin shares on balance are practically unchanged despite the late recovery in the price of the metal. The outlook is discussed below.

Oils are firmer, with *Apex (Trinidad)* 28s., and *Burmah Oil* 77s. 6d.

Investment Confidence

In accordance with my previous predictions leading industrial shares are again being bought after the recent severe declines. Providing there is no further upsetting news, steady recovery can be looked for between now and the end of the month ; but intending purchasers should keep a careful eye on future longterm possibilities.

Considering the adverse effects of foreign selling and the unsatisfactory outlook for any reduction in taxation in the forthcoming Budget, gilt-edged are holding up remarkably well. There is no doubt that the large weight of surplus funds awaiting investment exerts an influence which can only be temporarily upset by outside events. With Budget day rapidly drawing near, I am not, however, prepared to be too definite on the early outlook for first class securities. Assuming that "scare" selling is now almost finished, small upward movement, perhaps, occasionally offset by temporary set-backs, can be probably expected over the next few weeks.

As from the first of this month a new issue of National Savings Certificates, called the Sixth issue, has been on sale. The new certificates, costing 15s. each, will rise in value over ten years to 20s. each, and if held for the full period they will give a yield of £2. 18s. 4d. per cent. per annum free of income tax. As the yield is only slightly lower than the average of £3. 1s. 5d. per cent. on the Fifth series, which are now closed and which extend over a period of twelve years, it looks as though the Government either does not look for much further reduction in long-term interest rates, or it wishes to encourage thrift to the utmost extent.

Home Rails Again

Home Railway traffics for the past week are again disappointing, the total decrease compared with the corresponding seven days in 1934 being no less than £75,000 for the four main lines. This is the greatest set-back for the eight weeks of the current year, and more than half of the £137,000 total decline to date. The latter total is made up of declines of £132,000 in merchandise traffic and £155,000 in coal traffics, and an increase of £150,000 in passenger receipts.

As I pointed out last week, the early part of 1934 witnessed a heavy increase in the buying and transportation of raw materials, so that there is not as yet any serious cause for nervousness as to the outcome for 1935. In fact, judging by the remarks of the Chairmen at the annual meetings, there is definite scope for improvement, as trade in this country is still on the upgrade.

Further encouragement can be taken from the statement of the Chairman at the annual meeting of the Southern Railway Company to the effect that the recent successful appeal against rating assessments would mean an estimated saving of £300,000 per annum in future years, while there would also be a considerable sum repaid to the company representing overpayments in respect of the period since April, 1931. It is worth noting that this estimated saving is equal to almost 1 per cent. on the issued deferred ordinary stock of the Southern. It certainly appears that the other railway companies will be successful in similar appeals.

The full report of the *London and North Eastern Railway Company* discloses that total gross receipts for 1934 were £51,376,256, or £2,586,982 more than in 1933. Expenses increased by £2,025,006 to £43,521,169, leaving net revenue higher by £561,976, which figure is raised to £626,833 after adding sundry income and deducting debenture and other interest. My forecast of last week is thus confirmed. Statistics accompanying the report disclose that while 1934 total traffics increased by 5.25 per cent. compared with 1933, they are still 19.14 per cent. below the total of 1929.

The annual report of *Great Indian Peninsula Railway* discloses that the total annuity received for the two half years ended 30 June, 1934 was £1,165,057 less income tax. After deducting £8,254 for management and pensions, the balance available was distributed as to the half-year to 31 December, 1933—class A annuitants £110,052, class B annuitants £319,632, class B sinking fund £145,303—and as to the half year to 30 June, 1934—class A annuitants £111,366, class B annuitants £325,147. class B sinking fund £145,303.

Rayon Prosperity.

As noted above, the full report of *Courtaulds,* the large artificial silk combine, created a very favourable impression. Elsewhere I deal fully with the figures and give an analysis of the past record of this enormous concern.

Coincident with the Courtaulds report, rayon production figures in the United Kingdom for January were published. These show a fresh high record production of 10,120,000 lbs., against 7,860,000 lbs. in December last, and 8,460,000 lbs. in January 1934. The previous high monthly record was 9,000,000 lbs. in October 1934, while production for the whole of last year was 93,100,000 lbs. a record, against 84,100,000 lbs. for 1933. If the January figures can be maintained, output for the current year should easily break fresh records, and be well in excess of 100,000,000 lbs.

In the face of these two excellent announcements it is not surprising that *Courtaulds* recovered sharply to 51s. In fact, had it not been for the dull state of markets generally a much greater upward movement would, I am sure, have been seen. In sympathy, *British Celanese* issues have firmed up with the second preference recovering to 15s. 6d. I have every confidence in the continuing prosperity of the rayon industry.

Improved Iron and Steel Results.

When dealing with the position and prospects of *United Steel Companies,* I indicated that an interim dividend could safely be looked for on account of the current year. I am pleased, therefore, to note that a 2½ per cent. interim distribution is to be made on the £6,616,365 ordinary capital. In view of the company's past conservatism this distribution indicates that earnings are being well maintained, and I anticipate that the final payment will be at least 5 per cent., making 7½ per cent. for the year to 30 June next. On this announcement the ordinary shares have risen to 28s., at which price they are still undervalued on prospects.

Another interim dividend announcement that gives me satisfaction is that of *Staveley Coal and Iron Company,* which is paying 3 per cent. tax free, against 2½ per cent. tax free interim distributions for many previous years. As the final dividend for the year ended 30 June, 1934 was 4 per cent., making 6½ per cent. tax free, the probable final for the current year may be 5 per cent., making a possible 8 per cent. tax free for the current twelve months. At 39s. the £1 shares would give a very good yield on this basis, so that there is scope for appreciation.

Trading profits of *Baldwins,* the large iron and steel combine, increased by no less than £146,185 during 1934 to £502,642. After providing £65,363 for debenture redemption and meeting the dividends on the 6 per cent. and 7 per cent. preference capital, 2½ per cent.—the first payments since 1921—is to be distributed on the 4s. ordinary shares, which are quoted at 5s. 6d. At 13s. the 7 per cent. B 10s. preference shares are a good speculation offering a reasonable yield. Holders of these shares can convert before December 31, 1935 into ordinary shares (five ordinary for each two B preference) on paying a premium of 2s. per ordinary share. Thus, if the ordinary rise to over 6s. this right will become valuable.

Other Results and Dividends.

The report for 1934 of *Taylor Walker and Company,* the London brewers, provides further evidence of the returning prosperity of the brewing industry. Net profit of £268,765 for the past twelve months is £33,236 higher than for 1933, thus permitting of an increase from £20,000 to £30,000 in the allocation to property improvement and contingency reserve, and the raising of the dividend on the old £2,450,000 ordinary capital by 1 per cent. to 9 per cent. After paying a special *pro rata* dividend on 143,000 ordinary shares issued during 1934 in exchange for shares in a provincial brewery concern the carry forward at £130,840 is £6,550 higher than a year ago. The £1 ordinary shares are quoted at 44s. to yield over 4 per cent.

Another favourable announcement is that of *Gallaher,* the tobacco, cigarette and snuff manufacturers. Net profits for 1934 have increased by no less than £135,881 to a fresh high record of £441,841, while the proposed final payment of 12½ per cent. (8 per cent.) will bring the total ordinary dividend up to 18 per cent., compared with 11 per cent for 1933. The existing issued capital of £2,066,750. comprising 1,000,000 6½ per cent. preference and 1,066,750 ordinary shares of £1 each, is to be increased by the issue of 106,675 new ordinary shares to existing ordinary shareholders at 50s. each in the proportion of one new share for each ten now held, thus giving a substantial bonus as the present shares are quoted at 115s. It is generally understood that the Imperial Tobacco Company has a holding in Gallahers sufficient to give it control.

With Gallahers yielding little more than 3 per cent. at current price, I much prefer *Imperial Tobaccos* at 135s., or *British-American Tobaccos* at 117s. 6d.

The three Dundee controlled jute companies—*Samnuggur Jute Factory, Titaghur Jute Factory,*

Victoria Jute—are each paying final ordinary dividends of 10 per cent. again making 15 per cent. for their past financial years.

Gold Shares and Sterling.

During the past week sterling has steadily weakened against the franc and the dollar, and there has been a steady upward movement in the price of gold, with several new high records being created. On Friday last the price jumped by no less than 1s. per ounce to 145s. 1d. followed by a further rise on Saturday of 1s. 9½d. to 146s. 10½d. At the time of writing the price is 148s. 10d.

As was only to be expected, increasing attention has been paid to gold mining shares, and, as I have already stated, many sharp rises have been witnessed. The adverse effects of the South African Budget proposals have now almost been forgotten, a compensating factor being the fixing of the production price of gold at 142s. per ounce for February. This is the figure, on which the Rand Gold producers have based their monthly profits. The latter, however, do not make a good showing compared with January, as the number of working days was less. The figures, however, are very satisfactory.

African and European Investment Company announces that profits for 1934 were £863,167, compared with £251,780 in 1933. The 1934 profits are appropriated in writing down sundry assets by £171,122; providing £100,000 for income tax; transferring £20,000 to pension fund; allocating £8,500 to debenture redemption; and adding £250,000 to general reserve. From the balance a final dividend of 10 per cent. will be paid, making 15 per cent. for the 12 months, against 7½ per cent. in 1933, leaving £44,000 to carry forward. Despite these satisfactory profits, the shares remain practically unchanged at 45s. 9d. In the light of the satisfactory yield I anticipate capital appreciation in the near future.

If the price of gold continues to increase or even remains stable around 145s. per ounce further activity in gold shares can be expected. There are already signs that more attention is being paid to the non-producing companies, such as *Venterspost, Klerksdrop, Klip Nigel, Witwatersrand Nigel,* and *South African Lands.* On previous occasions I have recommended purchases of most of these shares at much lower prices than those now ruling. I still favour Klerksdorp, Klip Nigel, Kentan, and Van Dyk.

Turning to the West African market, renewed speculative activity is expected, and for those with a speculative turn of mind *Lyndhurst* 1s. shares offer scope for appreciation in view of the promising outlook for *Konongo Gold Mines,* in which Lyndhurst holds over half of the share capital. *Atta Gold* are still a healthy speculation, while *Ariston Gold* are the most promising lock-up.

Copper and Tin.

The International Copper Conference opens in New York during the current week. In view of the preliminary details already informally arranged in London, it is expected that there will be little difficulty in reaching an agreement on curtailment of production. During the last few days the price of the metal has been steadily rising, while shares such as *Rhodesian Selection Trust, Tanganyika Concessions* and *Rio Tinto* have been more active at increasing prices. For those prepared to take a moderate risk copper shares, particularly those of the Rhodesian companies, are worth putting away for higher prices a year hence.

Tin has been very disappointing. I am pleased to note, however, a recovery in the metal following a sharp decline on publication of wild criticism on the mismanagement of the tin pool. It certainly appears to me that unscrupulous interests are doing their utmost to engineer a bear raid on the metal. This is a very risky proceeding; and I have no hesitation in stating that it will be unsuccessful. On the long view, tin shares are still promising lock-up purchases. My selections are *Associated Tin Mines of Nigeria, Kamra Tin Dredging, Southern Malayan, London Tin,* and *British Tin Investment,* together with practically all the other leading issues

Market Pointers.

Much to the surprise of Rubber interests, the International Rubber Regulation Committee has decided to make no reduction in the basic output quota for the months of April, May and June, thus leaving the export allowance unchanged at 75 per cent. of standard production. The percentage is, however, to be reduced for the September quarter to 70 per cent. the figure expected for the quarter ending June next. After a short-lived disappointment, both the commodity and share markets soon recovered. The Committee can revise their decisions at any time they consider it desirable to do so.

Statistics prepared by the Bank of England disclose that the retail trade of Great Britain is expanding satisfactorily. Compared with the corresponding month in 1934, total sales for the whole country during January 1935 showed an increase of 4.2 per cent., the increases according to districts being: Scotland, 6.9 per cent.; North England, 3.4 per cent.; Southern England, 4.6 per cent.; London (West End), 3.0 per cent.; London (Suburbs), 5.2 per cent.

Judging by the recently published registration figures, the motor industry is also enjoying increasing prosperity. Registrations of new motor cars in Great Britain during 1934 increased by no less than 23.8 per cent. over 1933, while compared with 1932 the increase is over 48 per cent. Figures for the first quarter of the current year are certain to disclose considerable further expansion. *Austin Motors* 5s. ordinary shares have recovered sharply to 45s. 9d., and *Ford Motors* £1 ordinary are much better at 33s. I expect that interest in motor shares will expand during the next few months.

At the annual meeting of *D. Napier and Son* the Chairman intimated that a substantial order for the company's "Dagger" engines will shortly be received from the Royal Air force. I still consider the 5s. ordinary shares, now 9s. 3d., to be the best speculation amongst aircraft issues.

RATIBATY COLLIERIES, LIMITED.

NOTICE

is hereby given that the Twenty-Seventh Half-yearly Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Saturday, the 30th day of March, 1935, at 12-10 p.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 31st December, 1934, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 23rd to the 30th March, 1935, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

CALCUTTA,

WALL STREET IN AIR MAIL WEEK

UTILITIES BETTER

RAILS WEAK

BY F. ROCKE

By Air Mail

Special for "INDIAN FINANCE"

Unsettled conditions were again prevalent during the week under review and most sections were irregular. There were no signs of the activity which was expected after the Gold Clause decision. Utilities were the only bright section of the Stock Exchange. These were quoted higher on account of the decision of the Alabama Courts against the Government. Other Industrials were irregular. U. S. Steels were quoted low owing to the decline in steel mill activity. There was an improvement in the general tone for some time owing to the over-sold position of the market. The week closed better in the expectation that the time had come at least for a temporary rally as the market had been consistently on the decline for a long time past.

On the Bond market, Treasury Bonds advanced, as a result of Treasury support in preparation for further refunding operations. Other government issues were firm. There was heavy selling in lower grade issues. Lower grade rail stocks were under great selling pressure owing to the stricter lending attitude of the Administration. On the last day of the week New York Central and other low-priced rails were better.

Rails were especially weak during the week. The Administration is hostile to the railroads and is anxious for reorganisation in all cases where they are unable to pay their fixed charges. Mr. Jesse Jones, Chairman of the Reconstruction Finance Corporation flatly refused to give any further assistance to the weaker railroads. Institutions were anxious to realise their holdings as they feared a wave of bankruptcies as the inevitable consequence of the Reconstruction Financing Corporation's new lending policy. A number of Companies issued reassuring statements asserting their ability to continue in a solvent condition. The R. F. C. has sanctioned the sale of Minneapolis and St. Louis Railroad to be divided among eight neighbouring lines.

The New York Central Railroad has filed a plan with the Inter-State-Commerce Commission to meet 1935 maturities totalling $56,000,000 without further borrowing.

Holding companies were the only exception of the market and a bullish point for this section was provided by the decision of Judge Grubb in the Alabama Courts that the Tennesse Valley Authority had no right to carry out its proposed project of supplying electricity in competition with private enterprise. There is vigorous opposition to the Holding bill in its present form and it will have to be radically modified before it is passed. Numerous protests from individual investors have had their effect on the Government and questions and discussion at the Inter-State Commerce Commission's hearing on the Bill suggested that members were inclined to prefer a policy of regulation to one of extinction. Even though the bill will be considerably modified, there is need for caution as the President is at the head of the attack and acting on any bullishness based purely on rumour will be dangerous.

There has been a decline in Steel Mill activity. According to the *Iron Age* activity for the current week was at 48.5 per cent. of capacity compared with 50.5 per cent. last week. Production and prices of scrap metals have further declined in nearly all centres. The consumption of the automobile industry is maintained at its high level. Long term undertakings are being delayed. There has been some shrinkage in the volume of building contracts awarded. U. S. Steels were quoted low throughout the week. The steel sentiment is not strong.

Automobile production is being maintained at its high level. The Ford Motor Company have planned a March production of more than 160,000 units which is more than double the output for the March of last year.

The Chrysler Corporation announced a net income for 1934 amounting to $9,535,000 compared with $12,129,000 for the previous year. The decrease in profits in spite of an increase of 51.8 per cent. in the volume of business was attributed to higher costs of operation.

Investment Notes

A company which has benefited from the activity in the automobile and farm industry is the Borg-Warner Corporation. It is partly an operating and partly a holding company interested in the manufacture of carburetters, universal points and transmissions for motor cars, certain accessories for farm implements and a number of special steels. The 1934 earnings have increased considerably. The earnings in the first three quarters in 1934 were $2.04 against 70 c. previously. The dividend has been paid at 25 c. quarterly but the payment of an extra 25 c. for the final quarter of the year is suggestive of increased earnings throughout the year. At the present price of around 34 the yield is only 3 per cent., on the regular dividend.

The McKeesport Tin Plate Co. announced a slight fall in earnings in 1934. The company manufactures products for the packing and lithographic industries. It has no funded debt and its capital consists of 300,000 shares of no-par common stock. The dividend is well covered.

At the present price of around 97 the stock, with the annual dividend of $4 yields just over 4 per cent. The distributions have been in a conservative manner and if earnings in the current year exceed $6 the dividend may be increased. The stock is a good investment holding with long term capital appreciation possibilities.

The American Sugar Refining Company owns five out of the 21 Cane refineries in United States and is interested in three others. It has interests in twelve out of the 165 beet sugar refineries in Cuba and also draws revenue from molasses concerns and from extensive lumber lands which it owns in a number of States.

The whole of the outstanding funded debt of $1,515,000 6 per cent. Gold Bonds was recently called for redemption. The capital consists of $45,000,000 7 per cent. $100 par cumulative Preference Stock, and $45,000,000 $100 par Common Stock. At the present price of the stock at around 68 it gives a yield of 3 per cent. on the annual dividend rate of $2. The dividend is well below earnings and there is no reason for the continuance of the conservative policy of distribution. An increase in dividend is quite likely in the future and the chances of capital appreciation are bright.

An increase in the price of soap is likely in the future and with that the prospects of Proctor and Gamble, which was discussed in these columns some time ago, are bright. It is the biggest company in the soap business with an output amounting to 40 per cent. of the U. S. total. Earnings in the first half of the current financial year which ends on June 30 were $1.11 against $2.11 in the whole of last year.

The present quarterly dividend rate is 37½ c. (excluding extras, which have totalled 20 c. so far this year). A rise in prices would increase the dividend rate to 50 c. quarterly.

The Colgate-Palmolive-Peet Co. is another company in the line. Common dividend payments which were stopped at the beginning of 1933 were resumed again in the middle of last year at the quarterly rate of 12½ c. Earnings in the first six months of 1934 were 84c. per share against a deficit of 50 c. in the whole of 1933. An extra dividend payment of 25 c. last year is indicative of sharp recovery.

The present price of Proctor and Gamble Stock is 49 and of Colgate-Palmolive Peet—17. The yield is 3 per cent. on the regular dividend.

Business news

Power production in the week ended February 23 totalled 1,728,293,000 Kilowatt hours an increase of 5 per cent. over the corresponding week of last year, but a decline from the previous week.

The production of motor vehicles during January, as announced by the Department of Commerce, totalled 229,000 passenger cars and 63,570 motor trucks compared with 127,940 and 55,130 respectively in December.

According to the monthly business survey of the Federal Reserve Board, activity during January was the highest since the midsummer of 1933, with the index reaching 90. This compares 86 in December and 78 in January 1934 and is the highest figure since 1930.

THE BOURSES IN AIR MAIL WEEK

Paris

Most sections on the Bourse displayed an irregular tendency during the week under review. Prices fluctuated within narrow limits and the turnover was small.

On the Parquet Rentes and Bank shares were fluctuating. The former were often quoted lower. Industrials remained quiet, and uncertain. Among Foreign Bonds the 5½ per cent. German Young Loan was once quoted as low as 421.

Internationals were better during the early part of the week. On February 28, Royal Dutch Petroleums were quoted at 14,150, Central Minings at 1633 and Rio Rintos at 1028. The next day the prices were inclined to harden; but owing to the week-end reaction in Wall Street prices declined and Royal Dutch Petroleums were quoted at 14,000, Suez Canal at 17,700 and Rio Rintos at 1,006.

On the coulisse, Diamond shares were uninteresting. Shares in the gold mining group were prominent owing to the weakness in Stering and the rise in prices of gold. There was great disappointment at the maintenance of the existing percentage in Rubber Production and prices mover against holders. Oils were better than last week.

Berlin

Markets were firm during the first part of the week. Banks were the dominant feature and several gains were recorded. Industrials were steady, Farben industries being quoted at 140.90. Electricals were good, Siemens rising to 147¾. Shippings were steady and Minings better with Harpeners being quoted at 98¼.

On the last two days the markets were dull. Banks were quoted lower and the irregular price movements of other sections were mainly downward. Ford Motors were quoted low at 47½, Siemens at 146¼ and Schukerts at 97¾.

RESERVE BANK INAUGURATION NUMBER

EARLY APRIL SUPPLEMENT OF "INDIAN FINANCE"

In celebration of the creation of the Reserve Bank of India, *Indian Finance* has arranged to issue, early in April, a Reserve Bank Inauguration Number, to mark the importance of the occasion, to set out the significance of the institution, and to stress its meaning to national economic well-being.

The Special Supplement will be a fitting commemoration number; more, it will be a fully educative record.

It will seek to educate the lay public on the mysteries of reserve banking, the exact place of the Reserve Bank in the national banking system and general national economy, the status and balance-sheet-story of the member banks that will be joining the reserve banking system.

Special articles have been fixed up, of which the following deserve to be particularly mentioned:—

(1) "Empire Central Banks" by Sir Cecil Kisch.

(2) "Central Banking and World Depression" by Dr. Paul Einzig.

(3) "Future of Gold Standard" by Mr. Maurice Green, Editor of the *Financial News*, London.

(4) "My Plan for Natinoalising Central Banks" by Mr. Francis Williams, City Editor of the *Daily Herald*, London.

(5) "Recent Changes in Central Banking Technique and Practice" by Dr. Paul Einzig.

(6) "The Bank for International Settlements—its past, present and future" by Dr. Paul Einzig.

Full balance-sheet studies of each of the important banks will be furnished in the Special Number.

We have also arranged for various articles on various aspects of the Reserve Bank of India, its constitution, its working, its relation to the money market, its significance to national banking development, its coordination with Treasury authorities, etc.

Rates for advertisement are Rs. 200 per page and Rs. 125 per half page.

The price per copy of the Special Number is Rs. 3. But it will be supplied free to subscribers of *Indian Finance*.

Non-subscribers of *Indian Finance* who wish to have copies of the Reserve Bank Inauguration Number must register their orders before March 10. Such orders should be sent to:—Secretary (circulation), *Indian Finance*, Calcutta, together with a remittance at the rate of Rs. 3 per copy.

COMPANY REPORTS

DHEMO MAIN COLLIERIES, LD.

Report for the half-year ended 31st December, 1934.

After providing Rs. 23,525-0-0 for Depreciation the Accounts show a balance of Rs. 29,334-0-8 at credit of Profit and Loss Account including Rs. 22,801-9-1 brought forward from last half-year.

The Directors propose that this should be carried forward.

Net Raisings during the half-year were 81,642 tons compared with 92,003 tons in the previous six months and 84,477 tons in the corresponding period of 1933.

Despatches amounted to 82,573 tons against 95,542 tons and 86,388 tons in the preceding two half-years.

Stocks totalled 510 tons on the 31st December, 1934.

General.—Prices for steam coal have not shown any improvement on the previous period, but prices for slack and dust coals have improved considerably, a good demand having arisen for these qualities.

Restriction of output scheme.—The Government of India have refused the request made by the Coal Industry for a scheme of output restriction and in the opinion of the Directors this is a wise decision in the present circumstances. The industry awaits with considerable interest the details of a scheme for conservation of coal which Government proposes as an alternative to restriction.

E. G. Abbott, G. W. Leeson, G. L. Campbell, G. L. Scott—Directors.

Messrs. Macneil & Co.—Managing Agents.

CALCUTTA STEAM NAVIGATION CO., LTD.

The Managing Agents beg to submit herewith the Audited Accounts for the half-year ended 31st December, 1934.

After providing Rs. 50,000-0-0 for depreciation, the balance at credit of Profit and Loss Account is Rs. 45,156-1 to which has to be added the sum of Rs. 12,599-4-7 brought forward from the previous account, making a gross total of Rs. 57,755-5-7.

From this has to be deducted Rs. 16,044-9-5 for Commission, leaving a balance of Rs. 41,710-12-2 with which it is proposed to deal as follows:—

		Rs.	A.	P.
To pay a dividend of Rs. 3-8-0 per share, making a total of 6½% per annum ...	...	29,400	0	0
To carry forward in profit and Loss account	...	12,310	12	2
Total	...	41,710	12	2

During the half-year under review, there was an improvement in the Company's Boating Traffic, and at the time of writing the Report this improvement appears to have been maintained. The returns, however, from the Goods and Passenger Sections of the Company's Service were unfortunately adversely affected during the monsoon by exceptionally dull trading conditions in the Centres served by the Company.

In November, the Company took over the Ferry Services in the Port, which had formerly been run by the Port Commissioners.

The Fleet has been maintained in good condition.

Hoare, Miller & Co.—Managing Agents.

HOOGHLY FLOUR MILLS CO., LTD.

Report for the half-year ended 31st December, 1934.

Trading conditions were much the same as in the previous half-year. Keen competition from the Karachi Mills for the Burmah and local markets resulted in severe price cutting and these conditions still continue.

Electrification.—The Steam Plant, having rendered effective service since the start of the Mill, required extensive repairs and renewals had to be taken in hand at a heavy cost. After careful consideration it was decided in the interests of greater economy to avoid, such an expenditure on an old equipment by electrifying the Mill's Power Plant and Fire Service on the most up-to-date lines. The new Plant has been installed and is working satisfactorily.

Profit.—The Profit for the half-year amounted to Rs. 22,989-12-2 to which has to be added the amount brought forward, being Rs. 8,081-11-11 making a total of Rs. 31,071-8-1 and after deducting Rs. 10,511-13-8 for depreciation and Commission, there remains a balance of Rs. 20,559-10-5.

Dividend.—The payment of a dividend for the half-year ended 31st December, 1934, at the rate of 5% per annum free of Income-Tax is recommended. This will absorb Rs. 15,000 leaving a balance of Rs. 5,559-10-5 to be carried forward.

H. G. Stokes, R. A. Towler, M. Soloman—Directors.

Shaw Wallace & Co.—Managing Agents.

ALDIH COAL CO., LD.

Report for the half-year ended 31st December, 1934.

After providing Rs. 11,319 for Depreciation the Accounts show a balance of Rs. 19,891-1-2 at credt of Profit and Loss Account including Rs. 23,327-8-7 brought forward from last half-year. The Directors propose that this should be carried forward.

Net Raisings for the half-year were 98,264 tons compared with 1,19,550 tons in the previous half-year and 1,19,066 tons in the corresponding period of 1933.

Despatches amounted 98,404 tons compared with 1,28,465 tons and 1,15,895 tons in the preceding two-half years.

Stocks totalled 2,078 tons on 31st December, 1934.

Collieries.—Mehtani Colliery, where considerable difficulties have been encountered underground during development is now in a position to raise a large output at a reasonable cost.

General.—Prices for steam coal have not shown any improvement over the previous period, but prices for slack and dust coals have improved considerably, a good demand having arisen for these qualities.

Restriction of output scheme.—The Government of India have refused the request made by the Coal industry for a scheme of output restriction and in the opinion of the Directors, this is a wise decision in present circumstances.

The Industry awaits with considerable interest the details of a scheme for the conservation of coal which Government proposes as an alternative to restriction.

E. G. Abbott, G. W. Leeson, G. R. Campbell, G. L. Scott, J. S. Ker—Directors.

Messrs. Macneill & Co.—Managing Agents.

BENGAL AERATING GAS FACTORY LIMITED

The Directors beg to submit the Audited Accounts for the half-year ended 1st December, 1934 showing a profit of Rs. 9,820-4-1.

After allowing Rs. 5,236-8-2 for Depreciation on Buildings, Machinery and Motor Lorry, and making Sundry Adjustments, there remains a sum of Rs. 15,885-3-8 at the credit of the Profit and Loss Account from which the Directors recommend:—

	Rs.	A.	P.
A Dividend of Rs. 1-8 per share (3 per cent. per annum)	9,750	0	0
Carry forward	6,135	3	8
Total ...	15,885	3	8

Trading conditions have continued to be dull and results unfortunately show no improvement.

The erection of the Dry Ice Plant referred to in our last report has now been completed, and manufacturing experiments have reached a stage which justified the placing of this new product on the market. It is hoped that in this way a demand can be created for the surplus gas the plant is capable of producing.

Sir O. M. Jatia retires from the Board by rotation and being eligible offers himself for re-election.

The Auditors Messrs. Lovelock & Lewes also retire at this time and offer themselves for re-appointment.

J. H. S. RICHARDSON, D. E. D. EZRA, O. M. JATIA, —Directors.

Andrew Yule & Co., Ltd.—Managing Agents.

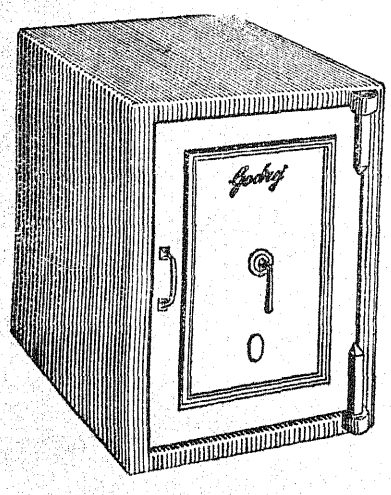
THEY CANNOT MAKE SAFES

WITH CHISELS AND HAMMERS

The proverb is that you cannot make bricks with straw. Nor can small shops make real Safes with chisels and hammers. Small hand tools and crude hand work could in no way take the place of modern machinery. Some important operations could never be performed except by machines only. Good Safes can be made only with the help of suitable and special machines.



THIS PATENT
16—CORNER-BEND

GODREJ SAFE

Applications for shares will be received from the 22nd MARCH, 1935 to the 25th MARCH, 1935.

Applications should be made on the Prescribed Printed Form and must be accompanied by the full purchase price of the Shares applied for.

Applications will be received at any Local Head Office or branch of the Imperial Bank of India, at a Government Treasury or at any Head Post Office in India.

Copies of the Prospectus (with application form attached) can be had at any of these offices.

INDIAN FINANCE YEAR-BOOK, 1934

LONDON PRESS OPINIONS

The Times

Useful Reference Work

Mr. C. S. Rangaswami, Managing Editor of the Calcutta weekly, *Indian Finance* now on a visit to this country, and his colleague, Mr. P. R. Srinivas, are to be congratulated upon the thoroughness of the *Indian Finance Year-Book, 1934*, Calcutta, Rs. 5 (7s. 6d.) It is valuable for the comparative tables given in all the sections, which comprise accounts of the India Government and the Provincial Governments; currency and monetary tables; external and internal trade in the chief commodities, industries, banks, insurance, public utilities, transport, co-operation and population.

Imports of cotton piecegoods of various descriptions from different countries are shown in millions of yards, figures being given of pre-war, war and post-war averages (each covering a five-year period) and of each year from 1929-30. Similarly, there is given the composition of the paper currency reserve under ten headings for the last day of each month since March, 1914. Each main section is preceded by an instructive survey of events and conditions in 1933-34.

A useful feature of the book is the tabular statement showing the working of the Tariff Board since its establishment in 1923, comprising the subject of enquiry, the recommendations of the Board, and the action taken thereon by Government. The industrial section is full and explanatory. The Year-Book will be of value to all who wish to be well informed on Indian economics.

The Financial Times

"Indian Finance Year-Book, 1934."

A PRACTICAL GUIDE TO CURRENT PROBLEMS.

The Joint authors of *Indian Finance Year-Book, 1934*, were wise not to subordinate the quality of this invaluable compendium to the rigorous requirements of a time table. The result is a notable contribution to Indian economic literature, as well as an indispensable work of reference, for the merchant, student and politician alike.

It would be difficult to imagine a more comprehensive and up-to-date compilation of facts and inferences, which should be in the hands of all who aspire to a proper understanding of the Indian problem. The national finances, including the provincial budgets and railway accounts, banking, currency, monetary and trade—overseas and internal—statistics are all marshalled and presented, with comparative figures in many cases for the preceding ten years, in convenient and attractive form.

Separate sections are devoted to industry, banking, insurance, public utilities, transport and co-operative societies. The history and working of the Indian Tariff Board are reviewed, and a feature of the banking and insurance section is the analyses of the balance sheets of the leading British, Indian and foreign undertakings operating in India. The introductions to each chapter are well written and informative. The correctness of the facts can hardly be disputed. The authors' conclusions, if not always equally indisputable, are set out with obvious sincerity and based upon the knowledge and experience of one of the most successful and well informed Indian financial journalists.

The Policy

Indian Finance Year book, 1934 (Calcutta, Rs. 5)

The issue of this important publication so late in the year is regretted by the joint editors, P. R. Srinivas and C. S. Rangaswami. In the compilation of the book they encountered great difficulties in endeavouring to cover the entire field and were unwilling to subordinate the quality of the work to the requirements of the time table. The Year Book is an excellent survey of the National finance of India in 1933-34. It shows that India, having passed through a period of unprecedented deperession has now emerged into a better era. A brief résumé of the National Finances in 1934, given at the beginning of the book, deals with the finances of each Province separately, giving a survey of the Provincial Budget, and the taxation proposals for 1935.

The Daily Herald

Financial details are regarded by many as being uninteresting. Sometimes they are. But when they are intelligently illustrated they often provide most interesting studies.

An example of the latter kind of financial record is the *Indian Finance Year-Book, 1934*, which is an annual supplement to *Indian Finance*. The editor is P. R. Srinivas, and the Year-Book is published from 20, British Indian Street, Calcutta, at the price of five rupees.

It covers the entire national economic life of India and should prove of particular interest to investors in Indian securities at the present time. It provides a layman's study of the situation, with interesting sidelights on the human side of Indian problems, but a study which should at the same time provide the expert, the banker and merchant with the information he requires.

Discussing the means by which budgetary equilibrium has been established in the various provinces the editor, while congratulating the Governments concerned, does not hesitate to point out that "such improvement as has been effected has been at the cost of high human suffering, and that in the centre the very claim of Government to having balanced the budget is open to doubt and question."

The Financial News

"Indian Finance Year-Book, 1934,"

The Indian Finance Year-Book, 1934. (Indian Finance, Calcutta, Rs. 5) copies, of which have just reached this country, is a notable contribution to Indian economic literature. It is an indispensable work of reference and a most comprehensive compilation of facts and inferences. Statistics on national finances, provincial budgets and railway accounts, banking, currency, and trade, are all presented, with comparative figures in many cases for the preceding ten years, in convenient form. Industry, banking, insurance, public utilities and transport are dealt with in separate sections.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Pressure on floating balances has persisted, with the result that balances are mostly frozen. The cessation of Treasury Bills has made no difference to money market conditions. Nor was the receipt of Rs. 1⅓ crores against market's sale of sterling to the Government of any direct use in augmenting bank resources. At the close, however, a shade easier feeling was evident. But this might only mean that borrowers, knowing fully well that there was little or nothing to borrow, made other arrangements for their requirements and refrained from adding to the volume of demand in the call money market. A good part of the tightness of money in financial circles is to be attributed to the big quantity of government paper which professionals have had to finance by loans secured from banks. Our own estimate is that the normal stock of floating scrip in the three markets of Calcutta, Bombay and Madras is in the neighbourhood of Rs. 4 crores. In the old days, it used to be between Rs. 2½ crores and Rs. 3 crores. But the increased activity of Calcutta and Madras in giltedged is responsible for a larger carrying of government securities by market operators. If, then, the normal floating stock is roundabout Rs. 4 crores, the sales of 3½ per cent. Paper and other securities effected by the Government and the Imperial Bank over two months ago must have caused an increase of Rs. 1½ crores. Most of the holdings of market interests are financed on the basis of operators furnishing margins and the banks providing the rest of the funds required. It will thus be seen that though the responsibility for rise or fall, that is, for gain or loss, is entirely on the shoulders of the jobbers and professionals, the responsibility for finance falls ultimately on banks.

The practice in this regard is for a good few of the Indian banks to lend out money on a call basis to market operators. This practice is particularly in vogue in the Western capital. Owing to the bulge in the floating stocks, loans against government securities in the case of banks like the Bank of India, the Central Bank and the Bank of Baroda must have reached such dimensions as to cause a serious shrinkage in the volume of call deposits which are usually available from these sources. The largest lenders in the call-money market are the Indian banks. Now that their resources are dammed, continued persistance of monetary stringency is unavoidable. Real relief in this regard can be looked for only when the floating scrips in the market are reduced either by a portion thereof passing into the hands of investors or by a portion being taken away by purchases on account of the Government or the Imperial Bank.

Banks are now so full up with loans made against government securities, that they are not keen on making further advances. On the other hand, those who have overdrafts on giltedged are being pressed to reduce their borrowings. Moreover, 3½ per cent. Rupee Paper has been suffering a headlong decline in the current week; and this has meant a demand for bigger margins. Those who could not furnish the additional margins required are perforce obliged to sell. This again accelerates the fall. It has thus happened that the decline has assumed greater and greater velocity as lower and lower levels are reached. This has not, however, resulted in any appreciable shrinkage in the volume of outstanding advances against securities. For, if one operator has sold out, some other operator has bought and, in the ultimate resort, it is the banks that have to finance it. The money market situation is thus directly mixed up with the giltedge situation; and the problem reduces itself to one of eliminating the excess in the floating stocks of giltedged in market circles.

Considerable hopes were held, early this week, that the Government would expand currency for another Rs. 3 crores. While the hopes in this regard did not materialise, the market has tried to console itself that there were only ten days more for the Reserve Bank to start functioning; and that expansion would take place as soon as the Reserve Bank

authorities assumed control of currency. If the authorities had been arguing on these lines, we wish to bring to their notice an important point which, in our view, will make it impossible for the Reserve Bank to effect any expansion for the first few months. If currency expansion is to be effected, this operation is possible only by a transfer of balances from the Home Treasury to the Paper Currency Reserve. While the Government are the currency authority, the Finance Member can represent to the Secretary of State that such a transfer is needed. When, however, the Reserve Bank is the currency authority, it will have comparatively little say in the disposal of the cash balances of the Secretary of State. As we understand the working of the new arrangements, the Secretary of State will be in a position to call upon the Reserve Bank to supply funds as and when necessary ; but the Reserve Bank will have no authority to call upon the Secretary of State to re-transfer to the Bank any portion of the funds in his hands. In the new financial year, the Home Treasury will start with a comfortable balance. So far as the Reserve Bank is concerned, it will have no sterling cash balance. Such sterling assets as may come to its possession will belong to the currency reserve. It may be that, in the course of a year, it will be possible to accumulate enough sterling balances to pay out for the Secretary of State's requirements and to leave a surplus in addition. Only after the remittance programme has been fulfilled, and surplus begins to materialise, can the Reserve Bank think of any expansion of currency. If this interpretation of the new situation is correct, it follows that such expansion as is necessary must be effected before the Reserve Bank is started. There is, however, a way by which the conundrum here propounded may be solved. Of the gold and sterling securities which will be handed over to the Reserve Bank, the Bank authorities may decide (or may be allowed to decide) that a portion, say, the equivalent of £10 million of sterling securities may be kept in the banking department. If this is done, expansion of currency can be effected by transfer of sterling securities from the banking section to the issue section.

Meantime, the position in the stock exchanges is disquieting, extremely so. On the eve of the holidays last week, 3½ per cent. Rupee Paper was quoting Rs. 96-4, 3½ per cent. India sterling paper was quoting £95½. The German developments took place during the holidays. Monday opened in extremely nervous conditions. Anticipating that London advices, which would be received towards the evening, might show a drop in prices, Bombay came out as persistent sellers. Since then, it has been a continuous retrogression in prices. The present position is that 3½ per cent. Rupee Paper, after touching Rs. 92-2, has rallied to roundabout Rs. 92-12. There has thus been a drop of nearly four points in 3½ per cent. Rupee Paper. On the other hand, 3½ per cent. India sterling paper, which was quoting £95½ on March 18, is now £94½. Sterling paper has thus lost only one point. There can be no doubt that the fall in 3½ per cent. Rupee Paper has been overdone. But, when the market is seized with panic, with each fall in prices, the momentum of the fall shows rapid increase. No relief in this regard can be expected till something is done to drain the surplus stock from the market. The giltedged market is suffering from a definite indigestion. If prices had been advancing, the surplus stock would have been easily assimiliated. As it is, the fall has been considerable, almost catastrophic. The indigestion has now become a dangerous malady.

Other markets have been feeling the sympathetic influence of the regress in giltedged. There are, however, indications that jute shares are trying to shake off the yoke of government securities. Howrahs, which came down to Rs. 60-11, have recovered to Rs. 62-4. Buying pressure is still absent. But there is nothing like the same panic. The coal market is worried about the prospects of Government's intervention. The authorities turned down the restriction plan sponsored by the trade ; but they promised that they were working out a scheme for the conservation of coal resources.

Thursday.

Since the decline in sterling was first arrested in the early part of last week, sterling regained a great deal of the ground she had formerly lost. It is yet too soon to say whether it will be able to hold its own or whether there will be a fresh onset of weakness. But the events of the last three weeks and more have made it clear that every serious fall in sterling has in the present circumstances the germs of its own recovery. It was clear from the beginning that the decline of sterling to well near 70 f. is serious enough to cause alarm about the fate of the Continental gold currencies and set in motion the one force calculated to bring about a rise in the exchange value of sterling. For at the time the decline in sterling occurred, it was not possible either to single out the most potent factor or to spot any definite source of intrinsic strength. One had only to cite a number of circumstances as having caused, in their cumulative effect, the fall in the British currency. Such circumstances are, it is well known, the prospects of a general election and a change of Government, the publication of the defence estimates which raised the fear that the Government was embarking on a programme of armament expenditure regardless of the yield of revenue, the assumption that the Exchange Equalisation Fund had no large resources at its disposal and that the authorities are almost glad to see sterling at lower levels. Though there has been to some extent an exaggeration of each of these factors in the minds of those who have beared sterling and, generally speaking, amongst all Continentals, none of them is untrue; and at the same time no factor is such as admits of a speedy improvement from the standpoint of sterling. It was, therefore, possible to suggest that the chances of recovery in sterling depended solely on similar doubts arising about other currencies, in which case there would be a flight from such currencies into sterling and sterling would, as a result, recover.

The last fortnight has shown that this prognosis has come true earlier than was anticipated. For the fall of sterling has created a position of extreme difficulty for the countries of the gold bloc. Even in France, where the resources of the authorities for maintaining the currency are as much as they could wish, the decline in sterling has caused unmistakeable alarm. As was pointed out in these columns at the time, the French authorities had actually carried out an investigation into the effect of devaluation of the franc at various degrees on the financial position. This lent colour to the suggestion that the French Government were prone to regard the decline in sterling as a welcome pretext for the devaluation of the franc. But it must be remembered that opinion in France is not altogether unanimous on the question. And so long as the opponents of devaluation are strongly entrenched in high office, it is idle to expect a lowering of the gold value of the French Currency.

It has been often said in these columns that the strength of the gold chain is in its weakest link. If the gold bloc is to be broken through and an abandonment of the gold standard brought about on the Continent, it would be through the opening offered by the weakest member of the gold block. Belgium has long been accepted to be such a weak link. After sterling reached its nadir, the difficulties of Belgium thickened very considerably. The discount on forward exchange increased a great deal; and Belgium was driven to reopen the whole question of the means by which the stability of the Belga could be maintained. She had again to confer with France as the leader of the gold bloc and ascertain the extent to which France would be prepared to help Belgium in the task of maintaining the gold standard. It is, indeed, strange that Belgium could have entertained any hope of succour from France. For it will be remembered that, at the time of the Gold Bloc Conference in the autumn of 1934, Belgium failed to persuade France to grant her the credits necessary for ensuring the stability of her currency against speculative attacks. In spite of these chilling experiences of the past, Belgium has, it would appear, during this weak again re-opened negotiations with France. And on this occasion she has put forward the proposal that France should increase her off-take of Belgian goods. This is even more difficult than the grant of French credits. For the goods, which Belgium has to offer to France, are of the same character as France herself produces within her borders. In these circumstances, it would be doing violence to French industry to consent to take Belgian goods; and one may be sure that there is no chance whatever of France accepting these proposals.

It is reported that the failure of these negotiations has created an extremely grave situation necessitating the resignation of M. Theunis and his colleagues on the Cabinet. It is specifically said that the cause of the resignation is the opposition which has been put up to the Cabinet's proposal for safeguarding the currency. In these circumstances, it would be reasonable to presume that the change of government signifies a change of exchange and monetary policy. But that again, we are told, is not correct. There is, the report adds, to be no change. But all the same the discount on forward belga is as much as 70 centimes. The spot rate has increased from 20.37 to 20.59 ; and the feeling is growing that the Belgian currency is more and more insecure. It has to be remembered that the Right Wing of the Chamber held a meeting after the resignation of the Minstry and decided, with the exception of two votes, to adhere to the gold standard policy. The Left Wing of the Senate, too, made a similar decision; and even the Socialists are reported to have declared for the gold standard.

The other vulnerable point in the gold bloc is the Italian lira. The position of the lira and the difficulties, which the Italian authorities have been experiencing since the turn of last year, are well known to the readers of these columns. It need only be added here that since the time of the institution of the regulations regarding foreign balances the trend of the lira had been distinctly downward. It is not as if the authorities are prepared to allow the decline of the lira. Nor have they given up the attempt to peg the exchanges. What they have done is to admit that discretion is the better part of valour, and to allow a marked decline, when it occurs, and then to raise the peg to a level slightly higher than lowest. This will entail a progressive decline; so that in this case also the difficulties of the gold bloc countries are brought out clearly in the fall of the exchange. Apparently, the authorities still hope that the peg may be raised to the former rate. But practical difficulties are bound to supervene. And one may say that a decline of seven per cent. may be said to have come to stay. The other important country is Holland, which is reported to be greatly disturbed by the difficulties of Belgium. A position like this may be said to offer the best chances for a world conference, should any one of the powers have the courage to convene one.

PUBLICATIONS OF THE LEAGUE OF NATIONS

"BALANCES OF PAYMENTS, 1933"

Price: Rs. 4-2-0

Only existing statistical book of reference concerning international accounts (trade in goods and services, gold, long and short-term capital operations). Figures, are given for 32 countries, in the majority of cases for a series of years up to 1933 inclusive. Information is also supplied concerning outstanding international liabilities and assets. In a summary chapter the general tendencies up to September, 1934, are dealt with, special consideration being given to the effect of currency depreciation.

"ARMAMENTS' YEAR-BOOK, 1934"

Price: Rs. 13-12-0

This edition contains monographs on 64 countries, both members and non-members of the League, The information contained is derived from two sources: the communications from various Governments to the Secretariat on the occasion of the Conference for the Reduction and Limitation of Armaments and the official publications of the different countries, such as collections of laws, army gazettes, etc.

"NATIONAL PUBLIC WORKS"

Price: Rs. 8-4-0

This book has just been issued by the Communications and Transit Organisation of the League of Nation and is the result of a letter addressed by the Secretary General of the League requesting various Governments to communicate to him the following particulars: (1) A brief description of the main public works undertaken since the beginning of the year 1929; (2) The principal administrative methods followed or contemplated for the execution of such work; (3) The principal methods employed for financing such work; (4) An estimate, as far as possible, of the allocation of expenditnre on the execution of the possible works.

"INTERNATIONAL TRADE STATISTICS, 1933"

Price: Rs. 6-14-0

This volume analyses the foreign trade during the years 1931, 1932 and 1933 of 65 countries accounting for 95% of the total world trade. It contains more than 300 tables, which are accompanied by explanatory notes. The data it gives illustrate strikingly the great changes undergone in recent years in the composition and direction of foreign trade, and their effect in the position of the individual countries. The synoptical tables show the percentage distribution of each country's imports and exports by provenance and destination.

Complete Catalogue sent free on application.

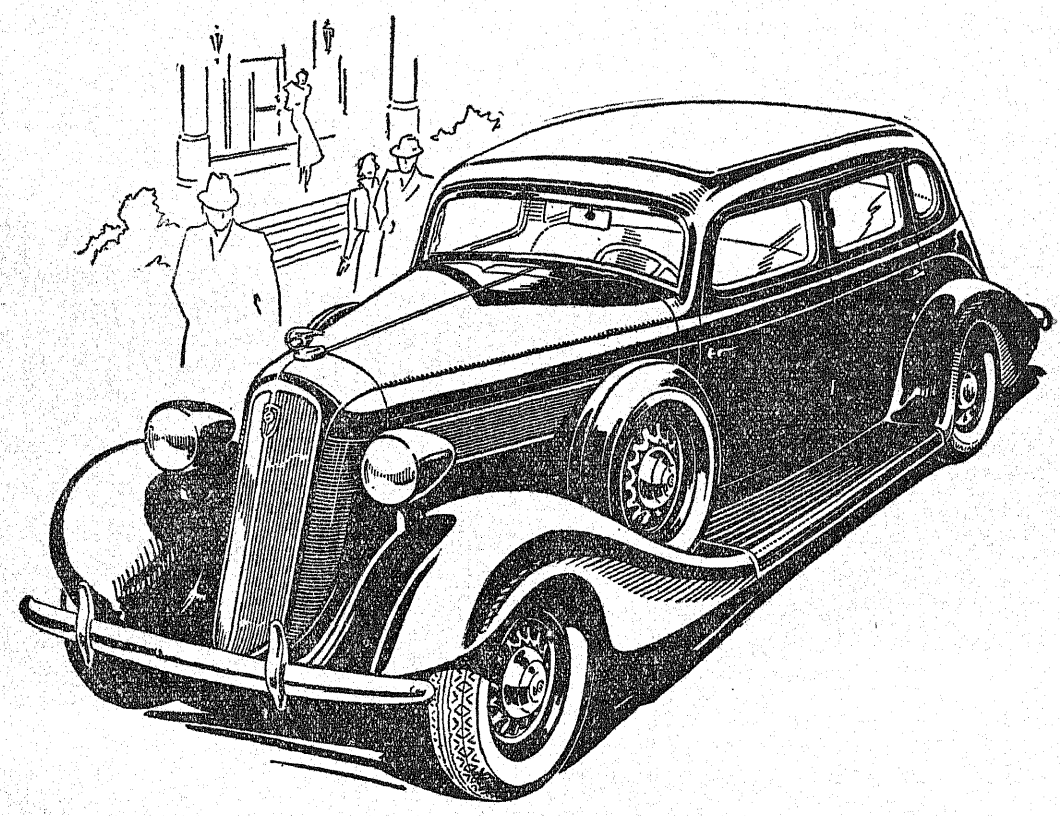
ANNOUNCING THE NEW 1935

STUDEBAKER CHAMPIONS



World's first cars with new independent front wheel suspension which ensures the most restful rear and front seat ride — regardless of size — that motoring has ever known . . .

MAKE US PROVE IT!

World's easiest handling, most obedient, surest-footed cars . . . scientifically steadied against drifting and side slip, even when rounding difficult corners at high speeds . . .

MAKE US PROVE IT!

World's safest, swiftest, straight-line stopping . . . the result of new compound hydraulic brakes of special design which are unexcelled by any car regardless of price . . .

MAKE US PROVE IT!

IN THESE 1935 Champions, Studebaker introduces motoring's most restful rear and front seat ride. We invite you to experience the comfort miracle of Studebaker's new independent front wheel suspension and automatic shock absorption.

Just as amazing is the remarkable handling ease of these new Studebakers. No other cars, regardless of price, respond so obediently. No other cars are so sure-footed, whether on straightaway or turn.

And they stop smoothly, swiftly, surely, with compound hydraulic brakes that have been engineered into each chassis to make Studebaker's miracle ride complete. Bodies are roomier—sedan front seats accommodate three passengers — and fashioned of steel-reinforced-by-steel for maximum safety and comfort.

You'll see nothing smarter than the new skyway silhouette of these Champions. Slender, radiators, new bonnet louvres, gull's wing mudguards, sloping windscreens, air-curved tops and rear decks give them a grace of line that many proclaim the smartest effect ever obtained in automobile architecture.

Studebaker has overlooked nothing in making these new 1935 cars the stand-out values of the automobile world—and they cost but little more than the lowest price cars. Why not arrange for a convincing trial drive today in a New Miracle Ride Studebaker Champion?

ON THE BRINK OF WAR

A week of break-neck progress in rearmament has set the world dangerously on the brink of another war. Hopes of peace were never at a lower ebb than now, since the days of the War ; and the nations, which had taken months to convene a plenary session of the Disarmament Conference, have voted fabulous army budgets within as many hours. To all intents and purposes, the race for armaments has begun in dead earnest ; and all that is left of the post-War attempts to end war is the professions of peace which are still made as a provoking accompaniment of the decision to arm. The debacle of disarmament is complete. Europe will soon revive, after one hopeless attempt at collective security, the pre-War system of alliances of a defensive and offensive character ; and the world will be set on the inclined plane which leads to certain disaster. The latest news has been somewhat more hopeful in that it promises a meeting between Herr Hitler and Sir John Simon. That this meeting as such is unaffected by the landslides that have occurred during the last fortnight is almost the only circumstance which enables the world to hope that frantic rearmament of a competitive character might at last be stayed. But it cannot be forgotten that European diplomats have a way of going through official and social engagements without allowing their policy to be altered. Nor can anyone under-rate the extent to which passions have been aroused by the apparently precipitate action of Britain and Germany. There is the utmost tension to-day ; and, paradoxically enough, this tension is a relief from the unbearable strain of keeping up the pretence of pacificism, what time each country was increasing its armaments either openly or surreptitiously.

*

It were well to trace the course of events that has led up to this unhappy *denouement*. Much as the world might hate the swagger of Herr Hitler to-day, there is no doubt that the efforts towards international peace would have had a far better chance, if Germany were not needlessly humiliated and embittered. The Treaty of Versailles carried out a forcible disarmament of Germany and at the same time enjoined on the powers the duty of reducing their armaments to the point at which no nation would have reason to feel nervous of its security. The Disarmament Conference was one prolonged and unconvincing effort on the part of the Allies to carry out their obligations. Germany had every reason to contend that, if there was to be such unconscionable delay in this process, she should be free to assert her claim to equality. The prevarication of France and Britain on this point led to the exit of Germany from the Disarmament Conference and the League of Nations. And in respect of the latter, Germany had the alluring example of Japan who had everything to gain and nothing to lose from quitting the League. The prestige of the League was well-nigh shattered by the defiance of Japan ; and Germany could well hope that what Japan obtained for an unjust cause, she could accomplish, with justice on her side. The Disarmament Conference never really recovered from the blow which Germany dealt by leaving it in dignified disgust. If to-day the legislatures of Europe are busy voting enhanced defence estimates, the blame rests, not with Germany, but with the Allies of the war period who could not confront her with a scheme of reduction of armaments.

* * *

For precipitating the present situation, the responsibility is, however, entirely Britain's. We expressed this view last week in somewhat caustic sarcasm ; and we are gratified to find that the *Economist*, too, is of the same opinion. While we observed that for Britain "to assume the role of a peaceful country being forced, against its natural instinct, to arm, because other nations are speeding up their defences, is, to put it mildly, only a half-truth," the *Economist* is even more severe and calls it "a travesty of the situation to represent this country as an unarmed innocent in a world of brigands". No one can deny the right of Great Britain to ensure the safety of herself and the Empire. But it is ridiculous to enter on negotiations for disarmament after announcing, only a few hours before, a vast increase in military expenditure. Herr Hitler is not to be beaten at this game of presenting a conference with a *fait accompli* on the very subject of negotiation. Germany declared immediately for conscription and the formation of fighting forces bigger than those of France. She openly repudiated her obligations under the Treaty of Versailles on the necessary and sufficient ground that the other signatories have not kept faith. She has owned the possession of an aerial force ; and the reconstruction of air, land and sea forces has been taken on hand. This has, obviously, the greatest significance to France. Legislation has been rushed through the Chamber for prolonging the period of training and increasing the expenditure on armaments. Italy and the smaller powers are in a flutter, busy speculating on the possible alignments in Western and Central Europe. All the European capitals are in communication ; and the excitement it almost as if ultimatums are being handed between one government and another.

* * *

The reaction of each country to this new situation would be interesting, if it were possible to ascertain them to a nicety. It is likely that the British Government feel it incumbent on them to pick up the broken threads of negotiations. Competition in armaments has been set afoot under cover of competition in catching cold ; and now both Sir John Simon and Herr Hitler are prepared to meet each other. This has been possible mainly because Britain has not taken as severe a view of Herr Hitler's action as the French Government has. The comments of the London *Times* point to the possibility that Great Britain is not unprepared to wink at Germany's assertion of her right to arm. But while this has made it easy for the German Chancellor to meet the British Foreign Minister, it has caused severe resentment in Paris, where a certain section of the newspapers declares that Franco-Russian co-operation must take the place of Anglo-French co-operation, if and when the latter becomes defunct. The round of fault-finding has gone on apace during these days. Britain has accused Germany in the White Paper on the defence estimates. Germany

pointed to Russia as the prime provocation to arm. Russia points to the whole world and Japan in the East. And now the bonds of Anglo-French co-operation are subject to the severest strain. France cannot stomach this itinerary of the British Foreign office to Berlin, Warsaw and Moscow.

* * *

With the Berlin Conference ahead, it were, perhaps, unwise to speculate on the future. It were even more so to intensify the war scare. It is even now not altogether impossible that Germany and Britain may agree on certain principles which will provide the basis of discussion with other powers. It should not be overlooked in this context that there is a fundamental difference between the attitudes of Germany and Britain to the steps each has taken. Germany believes that, now that she has asserted her right to arm, it should be possible to discuss the principles of limitation. In all the previous negotiations with France Britain has been heavily handicapped by the fact that Germany was disarmed. The developments of the last fortnight have lent a reality to the disarmament discussions. But everything would depend on the sincerity of the efforts towards peace. It is natural that those, who stand to gain by the perpetuation of the *status quo*, should lend not only a loud voice but also a willing heart to the cause of peace. Equally natural it is that the nations, who feel that their just rights are yet to be secured, should find it difficult to be as sincere in their professions of peace. For war has been the only effective instrument of national policy; and to forswear it without a just arbiter for the disputes of the nations would be to surrender all claim to redress. The tragedy of the present position is that the cause of peace is not identical with the cause of justice.

ON WAGONS AND LOCOMOTIVES

What exactly are the intentions of the Railway Board as regards wagon purchases? There are two disquieting factors we have to take note of in this regard. The first is that, for a portion of the next year's requirements, they have invited tenders in foreign markets. The second is that the Tatanagar Locomotive Works, which were kept closed down for over half a decade, are to be reopened for wagon repairs, which might, by slow evolution, come to mean wagon building. Inviting tenders from foreign manufacturing firms is a distinct violation of the pledge given to the Indian wagon-building industry. We cannot believe that the authorities will deliberately break their word; and we are prepared to agree that a possible explanation for the inviting of tenders from foreign manufacturers is to ensure that the Indian interests do not form a ring amongst themselves and quote too high a price. If this is the purpose of this year's departure in inviting tenders from outside of India also, we are afraid that we cannot congratulate the Railway Board on this move. It is, in our view, meaningless, futile, almost silly. The position is like this. If the invitation of offers from foreign firms was meant as a serious move, it is a wanton violation of a clear and specific pledge. If it was not a serious move, is it difficult to understand that the foreign firms, knowing that in any case they will not get the orders, will be inclined to quote ridiculously low prices, just by way of spite to the monopolists in India? In simple terms, the rates obtained in a tender system of this kind from foreign firms can be of no value.

* * *

We understand that the tenders from Indian and foreign concerns have been received and opened; and that one or two of the foreign manufacturers have quoted lower prices than the Indian companies. As we said, it will be a breach of faith if, on the score of lower prices or any other consideration whatsoever, the orders are diverted, even in part, to firms outside of India. And it will be imbecile if, on the score of lower prices quoted in a mock-tender, the Indian manufacturers are asked to revise their rates. We hope that there will be no recurrence of this folly next year.

* * *

As for the reopening of the Tatanagar Works, we are at a loss to understand the motives of the Railway Board. If they are so anxious to retrieve idle capital, why should they not utilise the workshop for the manufacture of locomotives? Before the purchase of these works by the Railway Board, they were called the Peninsular Locomotive Works, and the inauguration of the manufacture of locomotives in this workshop would be in accord with its original name and, in fact, with the original purpose of its founders. A Government, which is so keen on poking their nose into the wagon business, keeps fighting shy of locomotive manufacture. Are locomotives so difficult to make? Is India so unsuitable for this manufacture? Have any serious attempts been made in this direction? Let alone attempts, has any earnest investigation been made as to the possibilities? Mr. T. S. Avanashilingam Chettiar raised these questions in the Assembly the other day: and Mr. P. R. Rau said in reply: "An investigation is being made as to the possibility of building a workshop in India to produce Broad Gauge locomotives and boilers. The question is whether it is likely to be remunerative." In this connection, certain relevant data are available from which suitable conclusions can be deduced. The Bombay, Baroda and Central India Railway has been building all its locomotives for metre gauge; and it is difficult to see if there is any difference in kind (other than of degree) between metre gauge locomotives and broad gauge locomotives. Second, the Bengal Nagpur Railway has been building its boilers for the past several years; and the B. N. Ry. is not exactly a model of efficiency. What B. N. R. has done, the East Indian Railway or G. I. P. Ry., or N. W. Ry., or M. S. M. Ry., could do at cheaper cost and with greater efficiency. Third, if the total cost of a locomotive be analysed, it will be approximately 40 per cent. for the boiler and 60 per cent. for the frame plates, wheels, tyres, axles, valve gear, cylinders, etc. At present, in the workshops of all first class and even most other railways, all the various parts for maintenance purposes are manufactured except wheels, tyres, axles, frame parts, and steel castings. A good many of the parts are already being made in this country; and given an assured market, enterprise can be relied on to supply the rest.

* * *

Mr. Rau doubts if the manufacture of locomotives would prove remunerative. On the facts as now known, locomotive manufacture is much less of a wild-cat scheme than many a scheme of the hectic period between 1923-24 and 1930-31. Even assuming that the doubts of the Railway Board are genuine, it is quite possible, we believe, that an arrangement can be devised whereby private enterprise comes to the rescue of the Government. Our proposal will be somewhat as follows:—If we are not mistaken, the Tatanagar Works were bought for Rs. 40 lakhs. Allow for depreciation; and find its present value. Invite tenders for the floating of a Company in which the Government will be given debentures at 5 per cent. for the value of the Works; the tendering party will provide, in ordinary shares, additional capital for the re-equipping of the plant for locomotive manufacture; the management will be under the control of directors nominated partly by Government and partly by the holders of ordinary shares. The Government are, in this scheme, assured of a definite return on their investment; what risk there may be is taken on by private shareholders; needless competition in wagon manufacture is avoided; and the demand of the Indian public for domestic manufacture of locomotives is satisfied. We repeat, locomotives can be made in India; and the Legislature must insist that they shall be made in India.

FREE TRADE (?) IN ENGLAND AND PROTECTION (!) IN INDIA

Free Trade England is as dead as Queen Anne. Without a definite official policy of protection, Britain is, from time to time, taking steps to safeguard her industries in a more thorough-going fashion than does India whose official policy is said to be discriminating protection. The latest instance of such drastic, protective measures in the United Kingdom is the increase in the customs duties, ranging from £2 to £4 a ton, or, in some cases, 33 1/3 per cent. *ad valorem,* whichever is greater, on certain iron and steel production including billets, bars, ingots, girders, beams and rails. The enhanced duties will come into effect as from March 26. In general terms, it may be stated that the duties now proposed are more onerous than those which have been vouchsafed to the Indian steel industry by the Protection Act of last year. It is with extreme regret that we have to comment on the difference in outlook which animates the British authorities and the Indian authorities. So far as the United Kingdom is concerned, there is a definite minimum of raw material which must be imported from outside so far as the steel industry is concerned. Raw material in the case of the Steel industry may mean either iron ore, or pigiron, or steel billets. This is an industry in which iron ore is the raw material for pigiron ; pigiron is the raw material for steel ingots ; and steel ingots or steel billets, as the case may be, are the raw material for steel manufactures. The simple fact of the matter is that the better class ore in British mines has now been exhausted. The percentage of metal in the United Kingdom iron ore is between 25 and 30 per cent. To understand how low a percentage this is, we need only state that the iron ore which the Tata steel works use comes up to 70 per cent. of iron. The initial handicap of the British steel industry is, therefore, insufficient and poor ore. England has, thus, for keeping her steel manufacturing plants engaged, to import iron ore and convert it into pigiron, or to import pigiron and convert it into steel billets, or to import steel billets. For this reason, the United Kingdom has, as a rule, been importing a considerable quantity of billets or "semis" as they are called.

* * *

Billets must, therefore, be considered as an essential raw material for the British steel industry. It is this raw material which is to be subjected to heavy import duties. Can anything be at more glaring variance with sound economic principles? On the other hand, India can be hundred per cent. self-contained as regards semis. The iron ore belt of Chota Nagpur is both rich and inexhaustible. There is, besides, ample reserve of high-grade ore in the Central Provinces. Indian labour has now become fully trained in the manufacture of iron and steel products. The result is that India is in a position to produce to-day the cheapest pigiron and the cheapest steel ingots in the world. Moreover, the pigiron and steel produced in India are of the best quality. One would have thought that when India is so situated, the Government would be anxious to give every possible facility for the Indian industry supplying the entire requirements of the country. Such is, however, not the policy of the authorities. Billets, whether of British or non-British origin, are to be imported duty-free into India. The argument advanced for this queer state of affairs is that the re-rolling industry in India must be given every possible encouragement. The so-called re-rolling industry was really not in being when the Tariff Board made its recommendations or the Government took any action thereon. For an industry that was to make its appearance in the coming years, the Government were so solicitous as to grant free entry to foreign billets. In England, the re-rolling industry is a colossal business. It definitely stands in need of foreign billets for the simple reason that the domestic supplies are not sufficient. There was every case for free entry of foreign billets into the United Kingdom ;

Sun Life Assurance Company of Canada

The year 1934, has been one of returning confidence and of gradual recovery in business generally.

Because of its strength and dependability, tested and proved during a long period of universal anxiety, life assurance has been one of the first forms of business to experience the effects of the trend towards recovery.

That this experience has been shared by the Sun Life Assurance Company of Canada is indicated in the satisfactory character of the year's operations as reflected in the following summary of the Directors' Report:

Sixty-fourth Annual Report—1934

ASSURANCES IN FORCE, December 31, 1934 ... ... Rs. 7,53,07,54,528

This large amount, the accumulating estates of nearly a million Sun Life policyholders, will become payable to them or their dependents during this generation—a stabilizing factor of great social and economic value.

NEW ASSURANCES PAID FOR ... ... ,, 64,71,66,852

REVENUE ... ... ,, 42,76,19,172
DISBURSEMENTS ... ... ,, 31,31,18,611
EXCESS OF REVENUE OVER DISBURSEMENTS ... ,, 11,45,00,561

PAYMENTS TO POLICYHOLDERS AND BENEFICIARIES
During the year 1934 ... ... ,, 23,86,64,322
Since Organization ... ... ,, 2,45,18,48,485

ASSETS ... ... ,, 1,82,29,55,387

Bonds: government, municipal public utility and others; stocks, preferred and common; loans on mortgages; real estate; loans on Company policies; cash in banks, and other assets.

LIABILITIES ... ... ,, 1,78,38,78,221

Almost nine-tenths of this sum represents the policy reserve—the amount set aside to guarantee all policy payments as they become due.

PAID-UP CAPITAL (Rs. 54,79,452) and balance at credit of shareholders' accounts ... ... Rs. 90,40,351
RESERVE for depreciation in mortgages and real estate ... ... ,, 1,37,33,203
SURPLUS ... ... ,, 1,63,03,612
,, 3,90,77,166

The valuation of bonds and stocks has been made in accordance with the basis authorized by the Insurance Department of the Dominion of Canada, and in conformity with the bases authorized by the Departments of Insurance of the various Provinces of Canada, and the National Convention of Insurance Commissioners of the United States. Policy liabilities have been valued by the full net level premium method, a standard more exacting than is required under the provisions of the Dominion Insurance Act.

The above figures have been converted at par.

and the United Kingdom has levied duties. On the contrary, there was every case for discouraging the flow of foreign billets into India ; and India is to offer the fullest inducements to foreign billets.

* * *

The attitude of the authorities becomes all the more inexcusable if we appreciate the consequences that have immediately followed. A leading firm of Calcutta has already imported 10,000 tons of Australian billets. We understand that another 20,000 tons have been contracted for. India is to import Australian billets duty-free while Australia has built up high tariff walls against Indian pigiron. There is yet another anamalous development. The North-Western Railway, to whom the Tatas made repeated appeals for the reduction of freight, and who turned a deaf ear to their requests, has now obligingly reduced the freight on foreign billets. In the face of these factors, it is difficult to have any trust in the *bona fides* of the present official policy towards the Indian steel industry.

* * *

The reason for the increased customs duties now levied in England is that "imports of iron and steel, which previously had progressively declined, rose last year by 41 per cent. as compared with the previous year." This increase is effected on the recommendation of the Import Duties Advisory Committee. It is true that imports from Belgium, France, Germany and Luxemburg in 1934 actually came to 1,045,000 tons ; and that this represents a considerable increase on 1933 figures. But it should not be forgotten that the exports of steel goods at 2,253,000 tons mark an equal advance on the earlier years. It is the increased activity of British steel plants which has necessitated increased imports of "raw material." It is doubhtful if the British Industry could have maintained its enlarged output if raw material imports had been less in volume or more in cost. The British industry is itself aware of this position. It realises that a certain minimum of foreign billets is essential. But, in the negotiations that have taken place between British interests and Continental interests, trouble had arisen over what the quota figure for foreign imports should be. British interests were prepared to offer a quota of 600,000 tons while the Continental cartel urged for 900,000 tons. There can now be no doubt, though no cable information is available in this regard, that the negotiations have broken down. It may be that this portends the collapse of the Continental crude steel cartel. If this apprehensions proves true, Continental steel will be offered at cut-throat prices. England has now taken timely measures to protect herself against such developments. But what about India ? Under the Steel Protection Act, the Indian industry can again approach the Government for an increase in import duties against non-British steel if it proves that goods are being imported at dumping prices. Should such a situation arise, we are afraid that the Government might fail to realise the serious repercussions which would follow the continuance of duty-free imports of Continental billets. The concern for the Indian re-rolling mills has already led the Government to subordinate the present actualities to furture potentialities. All that we ask of the Indian Government is that they should do to the Indian steel industry what the British Government are doing to the United Kingdom steel industry.

* * *

The *Economist* of March 9, received by last Air Mail, contains alarming news as regards the future of the various cartels now subsisting in the steel trade. The Continental steel tube cartel collapsed on February 25, as a result of the negotiations concerning the quota to be allotted to Germany for production from works situated in the Saar. The fate of the International steel tube cartel was to be decided at a meeting of its members that took place at Brussels on March 11. Nothing is known of the decision arrived at in that conference. The International rail cartel was to be discussed at a conference at Cannes on March 7. The outcome of this conference is also not known in India. It may well be that the decision, now announced, of the Import Duties Advisory Committee in England is inspired by the failure of negotiations at Brussels and Cannes. In which case, the Indian authorities should step in as expeditiously as has the British Import Duties Advisory Committee.

NOTABLE UTTERANCES

The current phase of the economic problems of Bombay loomed large in notable utterances of the week. The textile industry was dwelt on, at length, by Mr. H. P. Mody, who, as the retiring President of the Bombay Millowners' Association, urged certain conclusions and underlined certain warnings in a kind of parting message after a five years' exciting, eventful and controversy-filled regime. At the Bombay Millowners' Association dinner, Lord Brabourne, the Governor, dealt with some of the salient features of the premier industry of the province committed to his charge. Mr. G. L. Winterbotham, presiding at the annual general meeting of the Bombay Chamber of Commerce, gave a comprehensive review of the mttters pertaining to the Western Capital in general, and to the British community particularly. The Governor, who was present by invitation, gave a running commentary on most of the topics brought up in Mr. Winterbotham's address. There is much food for thought, and some basis for comfort, in the four utterances, which we have now to deal with. At the outset, we may express our gratification that our business magnates are, in the periodical sessions of commercial bodies, covering wider ground and affording a fuller view of their respective standpoints ; and that heads of provinces are also finding more frequent occasions not only to exchange ideas with the business community but also to express their ideas on business problems. Till recently, reticence was the vogue ; it was not good taste to be voluble ; silence was deemed as golden as the proverb suggests. There are now more Chambers in existence ; a good few of the Chambers have more than one meeting in the year, some as many as four sessions ; and most presidents utilise the occasion for an exhaustive survey of general economic problems and a detailed survey of their direct and immediate problems. By the same token, governors of provinces welcome opportunities when they can explain the Government's position as regards, and their reaction to, the issues which engage the attention of the commercial interests.

* * *

The result is that the Chambers of Commerce, especially of Bombay and Calcutta, which are, undoubtedly, the most important business centres of India, have come to play an increasingly important part in a wider diffusion, amongst the public, of knowledge in economic matters ; and that the governors of the Western and Eastern Presidencies, Lord Brabourne and Sir John Anderson, have been able to cultivate and maintain extremely cordial relations with the business leaders. Sir John has been alert enough to utilise this contact for a more resolute tackling of planned economic activity in Bengal. Likewise, Lord Brabourne has derived great support from this factor so far as thorny problems like labour troebles and diversion of trade from Bombay are concerned. From this point of view, we cannot but regret the continuance of the piqued relations between the Government of India and the Federated Chambers ; and while the Government believe that they have taught a good lesson to a recalcitrant and impudent body, we must remind them that their own loss by this neglect of a fine opportunity to exchange and express ideas is even more grievous than the loss

of prestige which, they think, the Federation should be suffering on this account. The Government members showed, last year, some measure of response to the overtures from the other camp ; they would not attend the Federation ; but they 'graced' the luncheon party given by Mr. Nalini Ranjan Sarker, retiring President. If the stomach will not be contaminated by partaking of Federation victuals, will any of their other organs be fouled by their partaking in Federation proceedings? We urge a strong plea for less of intransigence on the one side and less of gracelessness on the other. Can't we differ and, yet, learn to agree to differ? The present pique is too childish to continue. We hope that someone, for instance, Lala Shri Ram, who is specially fitted for such a task, will take the initiative and arrange for the ending of this whimsical phase in the relation between the Federation whose interests he cherishes so warmly and so assiduously and the Government whose confidence he enjoys.

* * *

In this connection, may we suggest that there is equally a strong case for lesser reserve on the part of Chairmen of joint stock companies in their addresses at general meetings, annual or otherwise? Compared, for instance, with the balance-sheets and directors' reports of American companies, those of Indian companies furnish meagre information. Even as amongst Indian companies, those of the Eastern Province are less informative. In such circumstances, the Chairman's speech should be of value to shareholders as affording them such enlightenment as they are entitled to on the affairs and progress of their concerns. In England, whose example is beloved of our Clive Street leaders, Chairmen are particularly illuminating ; and care is taken, and no expense is spared, to give full publicity to these periodical utterances. In India, this example is followed in only a few instances. On Bombay side, the Chairmen of the New India Assurance and of the Central Bank, of Tata Steel and Tata Hydro-electric group are notable exceptions. We were pleased to see this illustrious proceedure initiated, at the very start, by the Chairman of the Industrial Investment Trust. The British India Corporation and the Bengal Coal Company on this side of the country belong to this select band. We want a universal extension of this wholesome practice. And, incidentally, we may emphasise that the Chairmen of companies can afford to be less taciturn in speech and less stingy in advertising their speeches.

* * *

To return to the speeches of the Chairmen of the Bombay Chamber of Commerce and of the Millowners' Association. As e said, they are thought-provoking (which, coming from men in their position, they must needs be) ; and they are somewhat comforting (a feature which is particularly cheerful in days which are dear to Jeremiahs). Of 1935, Mr. Winterbotham indulges the hope that "we may well set it down as one which marks a new epoch". Mr. Mody pours scorn on the pessimists and croakers and, triumphantly, asks, where is their voice now. An incurable optimist like himself has, Mr. Mody claims, proved the truer prophet. And talking of the future, the retiring President comes to the conclusion that the textile industry "may look forward to a steady and remunerative market." But, as all shrewd prophets do, both the speakers have protected themselves—in the one case by qualifications, and in the other by warnings that his warning should be heeded to. Alluding to trade recovery, Mr. Winterbotham preferred "to speak with caution." He explains himself in the following passage :

> "That recovery has begun there can be no denying—better Railway traffic figures, higher returns from customs duties and income-tax, and higher prices for some of India's leading commodities all tell their own story. But I confess to feelings of serious doubt as to how far the recovery can go without the removal of some of the barriers to international trade set up by the vicious policy of economic nationalism and by the instability of exchanges."

The international barriers to trade are there, true enough. But are there not further barriers raised by our own government? Is not an overvalued rupee a barrier built by the Indian Government against India's export trade? Is not Government's lack of plan or purpose in economic matters a real handicap? Are not top-heavy services, and taxes too heavy for the slender backs of Indians positive and onerous encumbrances! Are the Government taking all possible steps to maintain their credit at as high a level as it can be; and are they taking full advantage of a credit that can be so high, for the launching of public works schemes? Is not a Finance Member a misfit who, however adept in balancing budgets, has only contempt for all ideas and suggestions which do not have their origin in his own brain?

* * *

We wish that Mr. Winterbotham had dealt with a plan for regulating and directing economic activity and with the urgency, imperativeness and fruitfulness of such a plan. The credit for initiating, in the Legislature, the discussions on economic planning goes to the European group. Mr. F. E. James made, at budget time, a most illuminating and thoughtful contribution. Sir James Grigg vouchsafed what we must consider a flippant reply. It was within the province of Mr. Winterbotham to furnish a suitable answer to the criticism of the Finance Member. As for other issues raised by Mr. Winterbotham, we cannot agree that the proposed Federation is exactly a God-send. We believe, however, that far too much should not be made of the excessive character of safeguards as any constitution—even one devised by Indians themselves—could not eschew safeguards. Holding this view, we regret all the more the spirit in which the British community, both here and in England, have sought to make safeguards more like galling fetters than like inevitable and unavoidable checks. The bitterness on the question of safeguards is of the making of Britishers. We agree with Lord Brabourne that Bombay's business structure proves conclusively that it was possible to have the marriage of the Indian and European in governing the affairs of India ; and that the Bombay Millowners' Association gives the lie direct to those who harp on the impossibility of such a marriage.

Mr. Mody's speech is noteworthy for its warnings no less than for its heartening assurance about the future. He urges that the mill industry must be on the guard in respect of three matters:

1. There was a definite limit to India's present capacity to consume cloth; and, in one way or another, the supply must be regulated to the demand. Any sudden expansion in output is bound, therefore, to throw out of gear the economy of the industry.

2. The Japs are nippy. We must continue to watch if the Indo-Japanese agreement is honoured both in the spirit and in the letter.

3. "There is no hope, and there should not be, for inefficient plants. Museums, not mills, are proper places for out-of-date machinery".

* * *

We are glad that Mr. Mody has spoken his mind with characteristic vigour and pugnacity. The besetting sin of the Indian textile industry has been its lack of cohesion except when it has to beg favours from the Government. What is needed is a common determination to keep plant in proper trim and a common understanding about such questions as night shift.

* * *

Mr. Mody has, as is to be expected, much to say on his famous (or shall we say, notorious) pact with Lancashire. He reiterates, again in his peculiar strident terms, that "if the goodwill which the Agreement did so much to foster subsists, Great Britain will be one of the best customers of India in respect of a crop whose value to the agriculturist cannot be over-estimated". Has it produced the goodwill which Mr. Mody claims? Has there been any difference in the attitude of Britain towards India's political aspirations? To us, the answer appears to be in the negative. But Mr. Mody also refers to the way in which Lancashire is seeking to implement the undertaking to use more Indian cotton. And he exultantly points to Lancashire's takings of Indian cotton in the last cotton year. The record figure of 360,000 bales was reached; and Mr. Mody has hopes that even this record figure will be improved upon in future years. We have been amongst the sternest critics of the Mody-Lees pact; but we should concede that, on the present occasion, the figures quoted by Mr. Mody are in strong support of his claim. To understand the full import, it is necessary to quote comparative figures. The following table affords information regarding Lancashire's offtake of Indian cotton:—

	(bales of 400 lbs.)
Pre-war average ...	122,000
War-average ...	212,000
Post-war average ...	152,000
1929-30	270,000
1930-31	281,000
1931-32	168,000
1932-33	168,000
1933-34	342,000

In the ten months of this financial year, Lancashire has slightly improved on the takings in the corresponding period of last year. It must also be added that while, in 1929-30 or 1930-31, the United Kingdom held the sixth place amongst foreign consumers of Indian cotton, she came up to the second place in 1933-34. Japan has, of course, maintained her commanding position as our best customer. There can, however, be no doubt that Lancashire is earnest in her endeavours to give increasing preference to Indian cotton.

THE PRINCES' REBUFF

The mystery of the Prince's defection is gradually unfolding itself. Statements, notes and correspondence *galore* have been published; and wading through the huge mass of printed words one can emerge with just a few clear notions of the game that is now afoot. It is on the whole certain that, though the parties to the disputes have been labouring under a few misapprehensions which are capable of adjustment on that account, there have also been in the back of the minds of the Princes certain aims and aspirations which the Government of India Bill has naturally failed to satisfy. The atmosphere of sincere and friendly discussion has been kept all along since the Princes first gave their effusive welcome to the idea of an All-India Federation. And the public does not know till to-day whether any ulterior motives lay behind their utterances at the Round Table Conference. At any rate, it is clear now that the criticism of the Government of India Bill, which they published so dramatically a few weeks ago, is not so much to point out a few defects of draftsmanship, as to create a new bargaining ground for advantages, which were lost sight of in the silly sentimentalism of the First Round Table Conference. Though it is quite possible that what the Princes understood at the time to be promises have been overlooked, the Princes are now reaching out for privileges, which in the normal course of affairs they could not have dreamt of.

* * *

Before examining this question of new privileges, it is necessary to note how the points of law raised by the Princes have been dealt with by Sir Samuel Hoare. The note, which he forwarded to the Governor-General and which, he explicitly pointed out, should be published in India, is characteristic of Sir Samuel. It meets neatly and squarely all the points raised by the Princes in their various letters and memoranda. He removes misapprehensions where they exist. He admits defects of draftsmanship where they are established. He even promises to remove existing clauses or add new ones where such changes would carry reassurance to the Princes without offending the basic principles of the Act. But where the Princes have put in new claims, he is ready with an unequivocal statement of the position which His Majesty's Government are prepared to take. In diplomatic dealings one could wish for no better dealing. The Princess have suggested that certain words, as, for instance, "by treaty, grant, usage, sufferance or otherwise" in clause 2 should be omitted. Sir Samuel is prepared to accommodate the Princes in this respect, as the words are only descriptive and are not meant to have an operative effect. The Princes have expressed the apprehension that His Majesty might under the Act delegate part of the powers of the Paramount Power to some authority other than His Majesty's representative. On this point, too, Sir Samuel affords the categorical assurance that there is no such intention

and that an amendment to make this plain will be considered.

* * *

But it is obvious that the points mentioned above are trivial. The more important are those referring to the relation which the States will bear to the Federation on the one hand, and the Crown on the other. Taking the Federation first, the Princes have, it is well known, been labouring under somewhat queer ideas of a Federal constitution. Their attitude is almost betrayed in the demand that the Instrument of Accession should be named in the Act as Treaties of Accession and that each Federating State should be free, not merely to choose the items in the Federal legislative list over which it would accept Federal jurisdiction, but also the clauses in the Government of Indian Act as it will be, which shall apply to them. All students of politics will agree that to give in to this demand would reduce Federation to a mockery. It is true that there is room for genuine misgivings in the minds of the Princes. In the Princes' Conference at Bombay Sir C. P. Ramaswami Iyer made it clear to the asssembled rulers that the reservations which the Princes might make at the time of their entry into the Federation will not suffice to delimit sverely the encroachment of the Federal authority into their domain. To quote Sir Ramaswami:

> If your Highnesses accept the Act as it is, then you begin to be bound not only by the bare provisions of the Act, but by what in law is called the implications and the necessary consequences arising from the enactment of these legislative provisions.
>
> Let me go a little further. In many countries enjoying a Federal system of government, it has been laid down by the highest of tribunals that there is a very well understood jurisdiction, known as ancillary powers; in other words, if a State, viz., a unit in Federation accepts the Act then it accepts also all the powers inherent in the Federation which enable that Federation to exercise those powers to carry out the intentions of the Act.
>
> It has been held that, notwithstanding the specific reservations and conditions made by the State, if the State accepts the Act, these reservations and conditions are null and valueless; that the intention of the Act will govern; that by acceptance of this Act the Federation comes into being *ipso facto*.

Against this statement of the legal position, nothing, perhaps, can be said. But such a position is quite in the fitness of things in a Federal constitution. The constituent units choose at the time of their accession the spheres in which they would feel most jealous of interference and these spheres are precluded from federal authority in the original constitution. The princes in India have been given the same right when they are asked to choose the subjects which they would reserve to themselves. While in other Federations of the world the division into Federal and State subjects is uniform for all the participating units, the Princes in India are afforded a wide choice. British India as the major partner of the Federation has every right to protest against this sacrifice of uniformity of Federal and State jurisdiction for the sake of humouring the Princes. But the States make an altogether impossible demand when they suggest that there must be as many different constitutions as there are States.

* * *

If the Princes only aim at a factual repudiation of the authority of the British Parliament, Sir Samuel Hoare's reply should silence them affectively. For he makes it clear that the Government of India Bill has necessarily to take the place of voluntary agreement among the participating states, as, on the one hand, British India is not autonomous, and on the other, Indian India is not subject to the authority of the British Parliament. He makes it clear that, while the Act of Parliament in this regard is binding on British India by reason of the latter being subject to the authority of Parliament, in the case of the States, "the Bill when it has become law will provide the machinery whereby Indian States may severally accept that constitution and thus become part of the Federation, not because the Act is an Act of Parliament but because it embodies a constitution to which they have of their own vilition acceded." There is thus no question of the "authority" of Parliament, so far as the States are concerned. If what the Princes are seeking is a wider discretion in regard to the choice of Federal subjects than that afforded by the Federal legislative list, Sir Samuel Hoare is quite positive that there can be only one constitution for the whole of the Federation and a multiplicity of constitutions must be ruled out.

* * *

It would appear that even the demand for multiplicity of constitutions is not what the Princes aim at, so much as a definition of Paramountcy. Apparently the Princes have for some time regarded the long-drawn deliberations of the reforms as a valuable opportunity for gaining new advantages. The Political Department of the Government of India has long been a bugbear to them; and lately it has been very active, though it is true that, for this activity, the Princes have none but themselves to thank. Now that some of the functions of the Paramount Power are to be delegated to the Federation, it would be well to attempt to get such powers defined on the one hand, in relation to the Crown and on the other, to keep them out of the sphere of the new Federal authority. Ingenious as this might have seemed to the Princes, it is clearly ingenuous to believe that the British Government would not be able to see through the game. Sir Samuel's answer on this point is quite explicit. His Majesty's Government would not enter into the consideration of any question which has not a definite bearing on the Government of India Bill. They would not accept the position that "the Crown's present relations with the States have a purely contractual basis." And in regard to the claim for definition of Paramountcy, Sir Samuel observes:

> Their Highnesses put forward a request that the various claims advanced from time to time by the Princes in relation to the exercise of Paramountcy should be settled as a condition precedent to the accession of a State to the Federation. . . . The Bill contemplates that certain matters which had previously been determined between the States and the Paramount Power will in future be regulated . . . by the legislative and executive authority of the Federation. But in other respects, and in all respects as regards non-federating States, Paramountcy will be essensially unaffected by the Bill. I desire to make it plain that, though His Majesty's Government recognize the advantage of further clarifying the practice governing the exercise of Paramountcy, such issues cannot be determined by the consideration whether the States do or do not federate .

DEWAR'S "White Label"

India is still bullock-cart-minded. Literally as well as metaphorically. In my young days, I had an aunt who would go, twice a year, from my father's place to hers ; there was a fast train which left at ten in the night and reached her destination at dawn ; and there was a slow train which, departing at dawn, arrived at the end of her journey an hour or two after dusk. My aunt would always take the from-dawn-to-after-dusk train, arguing "why not get the value for money by travelling for as long hours as possible?" She had not learnt that time was money. On the other hand, she was persuaded that money was time. The money value in fare must be matched by the time value in the voyage. My aunt is dead ; but the outlook of my aunt is alive. Else, can you understand any modern businessman undertaking a twelve-hour train journey to Dacca while he can fly across in an hour and a half? And, I can tell you, I have known at least half a dozen of my friends (whose business is great and whose time has momentous value) drudge along to Dacca in slow-moving trains and slower-moving launches. On the other hand, Mr. M. K. Srinivasan (of the United India Life) and Pandit K. Santanam (of Lakshmi Life) left in the morning, finished the work in the noon and returned in the evening. They went, conquered and were back —all in less than a half-day. What Srinivasan and Santanam did, everyone, I would think, should do, not only as between Calcutta and Dacca, but as between Karachi and Calcutta, Delhi and Rangoon, Calcutta and Madras, etc. India is eminently adapted for air-travel. In this farflung Continent of distances, the air service is not only a convenience—it is a necessity.

"A Busy Airport" was the caption of a picture that appeared recently in the *Statesman*. Three long-distance planes had arrived the same day ; and this was advertised as a gratifying sign of the times. To me, it is a distressing and humiliating sign. In a country like India, the Air-Port in Calcutta could be called busy only if, not three, but thirty planes arrive and depart each day. Who, booked for Rangoon, would spend three days and three nights on the Sea when he can leave Dum Dum after *Chota* and reach Rangoon for tea? Who would?—I ask. But who does not?—is the taunting answer. The spirit of my aunt is not dead. India continue to think in bullock-cart terms.

Dacca, the centre where is gathered most of the golden fibre the province produces, can be assured of golden opportunities to rapid growth and increasing puissance if each businessman realises that it takes, by air, less time to reach Dacca than to pick your way, amidst the wearisome traffic and ill-kept roads, to any of the jute mills in, say, Kanknarrah or Chandernagore. Karachi!—when you planned to go to Karachi, the three days right across from the East to the West were a nightmare—thanks to the monotony of the journey and the sand which would mount inches high on bunk and floor while the train wends its way through the Sind Desert. If you will it, the expanse of the ozone-filled heavens is yours ; and, with K. L. M. at your service, you can save two and a half days of listless, dusty travel. But do you? I doubt it. I would say that India has left behind its bullock-cart mentality only when I see two planes leaving every day for Dacca—Chittagong-Rangoon ; for Allahabad-Delhi-Karachi ; for Tatanagar-Jubbulpore-Bombay ; and for Madras-Trichinopoly-Colombo.

The Tatas are doing much to popularise air-travel. My young friend, Mr. Jehangir R. D. Tata, is as keen in this regard as the Dutch Government. But are the Indian Government on the one hand, and the Indian public on the other, strengthening the hands of Mr. Jehangir in this pioneering work? Mr. Grant Govan, through the Indian National Airways, is endeavouring to make India air-minded. Is he receiving the encouragement he deserves? The test of these questions is furnished by another question: Is every plane leaving Karachi or Calcutta or Rangoon fully booked? I am not posted with full information on this matter ; but I have a feeling that the services are not patronised by the full capacity of passengers. This is a painful token of the primitive conditions still prevalent. This is conclusive testimony that the business outlook (whose first principle is the value of time) is still sadly lacking. I would go so far as to say that the criterion by which one should gauge the tenour of business and the grit of businessmen in any country is its attitude to air-travel.

Look at Holland. The Dutchman is, as a rule, phlegmatic and hard-headed. Emotion or sentiment has but little place in his mental structure. But, on the question of flying, the staid and stolid Dutchman is positively hysterical. There is nothing that he or his Government would not do for endowing Holland with the first place in air service. The good housewife of the countryside in the Netherlands, desiring to shop at the town fifty miles or so off, takes the plane as readily and as automatically as her compeer in England takes the suburban train or the tube. The interstate travel by air has been made cheap, convenient, reliable and aptly-timed. If I remember right, the aeroplane service works out to second class fare by train. The Dutch Government are spending a deal of time, thought, planning, experimenting and resources on developing and

rapidly improving air service within the country and as between the mother country and her Far Eastern Empire. The real triumph of the Melbourne race was, as I then pointed out from London, the achievement of the Dutch pilots with the Douglas plane which was not specially fitted or even altered for the epic flight but taken off straight from the commercial service. Holland is, I suppose, smaller than the smallest province of India ; yet, she has a commanding position in the air map of the world. India, with its vast distances (verily, a Continent, not a country), has real need of air amenities but does not come in the world picture at all. The spirit of my aunt should yield place to the spirit of the Dutchman.

Air travel has not only a special time value in India—it has a psychological value. It will give a tone and temper to national outlook. It will add pep and zest to business activity. There will be, if I may say so, more alertness, more nippiness and more effectiveness in results. The bullock-cart attitude is a symptom of leisureliness, inertia and lack of 'go' and enterprise in national character. The philosphic view, the pose of equipose, the balanced outlook—these have their significance; but India has an overdose of them. She can do well with a bit of the Yankee hustle and bustle. She must brighten, sharpen and quicken her people and their ways of thought and living. Air-mindedness would stir things up—it would popularise 'rush' and 'push.' I am, therefore, looking on the popularisation of air-travel not only as a physical necessity in a Continent like India, but as a factor which will give a new twist and turn to national traits. India will be all the better for a good, sharp shaking; and if she has a more widespread and better-patronised service of planes, we may conclude that this healthy and much-needed shaking has taken place.

There should, towards this end, be intensified activity on the part of both the State and the existing airways companies. The State should realise that, in the earlier stages, airways companies should be helped in all reasonable ways; the concessions they ask for should be given sympathetic consideration; the Government should be prepared to grant subsidies (and substntial subsidies, at that) if need be. "We follow your progress with great interest"—is the present attitude of the authorities. "We want you"—should be the new policy—"to make heady progress and to plan comprehensive development. Tell us how we may help you. And we will in every reasonable way." On the side of the companies, they should propagandise the virtues and advantages of air-travel. "Build in concrete"—is the slogan of the Cement Marketing Board. And the achievement to the credit of the Board is truly notable. Of ten buildings now planned, six or seven are in concrete. In less than a decade, the builders of homes have been made cement-minded. "India's purest beverage" is now being propagandised. My friend, Mr. Hutton Williams, has planned the Tea Series so effective and so taking that I, for one, would be surprised if the campaign does not add considerably to domestic consumption of tea. Mr. Guha Thakurta, the Publicity Officer of the Tea Cess Committee, has made an enterprising and resourceful lieutenant for propaganda to the Head of the Committee; and I look forward to more interesting, more gripping and quicker-result-producing campaigns. I believe that the Tatas will do well to take a leaf from the Cement Marketing Board and the Tea Cess Committee and initiate a countrywide propaganda for "Build in Steel." Mr. Hutton Williams oozes ideas; and he should be able to work out apt plans. Now, it is up to the Airways Companies to preach to all that have the means to "travel by air." I have done my bit. I have given a start to the campaign. Gratis and free of charge. Will they follow it up? I promise them, I shall second and support their endeavours in all possible ways.

Meantime, I may pose a last question: "Is there any proper and general understanding of the fine, quick and economical air-service between Calcutta and London?" There are, I believe, four weekly services —two by Imperial Airways, one by the Dutch and one by the French. And, do you know, the expenses of an air voyage are not much higher than those of a sea voyage. Let me give you the calculation. It is £95 off-season and about £120 during season, for return. Second, the fare from Calcutta to Bombay comes to £10. Third, the eat and drink, taxi and cooly in respect of this journey are fully a pound. Sixth, there is the £13 for the P & O Special from Marseilles to London. Seventh, an extra pound and a half for food, porter etc. Eighth, all these expenses are to be repeated on the return journey. And if your wife (and, possibly the kid) comes over to Bombay to welcome you on the boat, you have to add their expenses. I may now make out the entire bill, omitting, however, the 'wife' item.

another £20 is off the total. And you are landed, for the nights, in such out-of-the-way places, and you are pulled up so early in the mornings, that the chances for hectic dissipation are practically nil. While the air route is not costlier, you get a clean saving of twenty days. What can't you do with an extra twenty days? I know, there are people who dilate on the virtues of the rest cure in a sea journey. I don't know about the rest. From the fourth day, I get listless. From the sixth, it is positively boring, the same scene, the same people, the same so-called amusements. The amusements themselves begin to irritate me. Think it over, my shrewd reader, and tell me if you will travel sea next time. I am sure, I won't.

Sir Shunmukham Chetty has accepted the Dewanship of Cochin. For this anti-climax, the Government are themselves to blame. He was cut out for the Deputy Governorship of the Reserve Bank. It ought to have gone to him. It is no reflection on Sir Sikandar Hyat Khan if I repeat that, had intrinsic considerations prevailed, the Government must have appointed Sir Sanmukham, and only Sir Shunmukham, to the Deputy Governorship. It was not intrisic, but political, factors that decided final choice. I, for one, am not very much grieved that Sir Shunmukham missed the Assembly seat. But I feel strongly that when there was just the proper choice open to the authorities and this choice would have rendered more useful and worthy the career of one in whom they have confidence and for whom they now profess solicitude, they deliberately and wantonly let down Sir Shunmukham. The Cochin Dewanship is, I suppose, by way of amends. All this posthumous reparation does not mitigate the original injustice and undeserved slight. I know that, in view of the important political issues in which Cochin is interested in connection with the Harbour, Sir Shunmukham will be called upon to tackle much more than routine administrative matters. And there can be no doubt that he will bring to his task an alert and resourceful mind. Of the success of his regime in Cochin, I am fully confident; but Sir Shunmukham is destined, sooner rather than later, to strut a bigger stage. It won't be long before a stage suited to his part and to one of his parts is vouchsafed him. With Sir Shunmukham's politics, I am not in agreement, for his economics (minus Ottawa Pact), I have every admiration. I trust, the Cochin interlude will help the shedding of politics and the further strengthening of economics.

The Sun Life of Canada has made, in 1934, even more notable progress than ever. By every criterion, the achievement of the past year must give satisfaction, not only as a measure of the Company's sustained growth but as a token of the improvement in world finance. Mr. Arthur B. Wood, President and Managing Director, referred to the encouraging reports received from financial institutions indicating that the world was gradually recovering from depression. And he claimed that "the satisfactory report of this Company's operations in 1934 confirmed this opinion." New Business in 1934 increased by £4 million ; and it came to the colossal total of £48.50 million. Expenses have gone down—and excess of income over expenditure (after alloting £2.90 million to policy holders) is no less than £8.80 million. Assets have increased to £136.72 million. It is as well that I discuss 1934 figures in rupee equivalent as their true import will then be better appreciated. New assurances paid for have gone up from Rs. 59.33 crores to Rs. 64.72 crores ; total revenue from Rs. 41.00 crores to 42.76 crores ; increase in assets from Rs. 6.45 crores to Rs. 11.45 crores ; and assets from Rs. 171.00 crores to Rs. 182.30 crores. Life Assurance has been one of the first forms of business to experience the effects of the trend towards recovery ; and the experience of Sun Life in this regard has been most gratifying.

OLYMPUS

(FROM OUR CORRESPONDENT)

March 19, 1935.

Every journalist here felt bitter yesterday about an arrangement which puts into their hands at five in the evening a White Paper of over twenty thousand printed words. A layman may say that there is nothing to prevent a journalist taking it easy and publishing the story in the morning. He forgets two fundamental points. Firstly that if *his* paper does it, and omits to rush it into the Dak Eddition he would give it up as stale, lacking in 'enterprise' and all that; and further, in India, the newspaper press mostly is in provincial headquarters and a long summary of the White Paper had to be carried over the wires, immediately, to enable it to reach in good time for the morning papers.

I am glad that *The Statesman* this morning has published a spirited protest. The reason for this state of affairs is the anxiety of the Government to be fair to every side. Which means that the communication is released to all the press people at a given moment. In the abstract, this is very sound; but, in practice, the older system worked better. Under the latter system, the Department concerned would get into touch with a journalist, who could share their confidence and get him to prepare a summary of the important document; and after it was approved as fair and correct by the head of the Department concerned, it was allowed to be put on the wires at the scheduled hour.

This method enabled the entire press in India to be saved the trobule of making its own summary in a hurried fashion; and the newspaper reading public obtained a good idea of what it was all about. The old system did not involve any favouritism, in that no one was allowed to use the summary before the appointed hour and it was only a question of who would care to spend the money for telegraphing the summary and those who could, had, handy, a summary which met the journalistic requirement of a bright and interesting account and the official test of balanced representation of the case.

* * *

The White Paper published yesterday required particularly careful and delicate handling. Not the least of the difficulties is the use of an identical expression by the two sides in two different senses. Though the two parties are fundamentally different in their outlook, they are both confident that the differences are reconcilable. The public was entitled to be shown how this remarkable result has been achieved by draftsmen on either side so that they may draw their own conclusions about the future of Federation.

The fundamental difference arises in this way. The Princes thought that the Federation plan would give them a chance, on the one hand to restrict the sphere of paramountcy, and on the other to enjoy a powerful hold on the Central Government. The Secretary of State felt that the Paramountcy would remain paramount and that, therefore, the Federal Government would, to the extent of the States' influence, pay due regard to the wishes and interests of the Paramount Power.

* * *

The course of events has revealed the real intention of the two sides. Beneath all the verbiage lies the declaration of the Princes "We will not come into Federation unless Paramountcy is defined as this was the chief gain we hoped to get out of the Federal plan. We certainly do not surrender our sovereignty to the British Parliament even in respect of the matters on which we agree to federate." The Secretary of State answers "Paramountcy remains paramount. This has nothing to do with the Federal plan. When you federate, you federate, and the British Parliament being the Parliament of the Paramount Power you are even to-day under that Parliament and there is no such thing as taking away your soverignty."

Thus it comes to this that the Princes who thought they were clever find themselves in the position of the Nizam, who having visualized his Exalted status as justifying his appeal to an independent international tribunal, was told by Lord Reading that he was entirely subject to the Paramount Power and dependent on its sweet will and pleasure. The Princes, too, have found themselves forced into a similar position.

I am told the reason why the White Paper was issued was that Mr. Churchill obtained the entire correspondence somehow or other and was about to issue it in a pamphlet form. Sir Samuel Hoare scored tactically against him by releasing the correspondence officially.

It is now clear that either the Federation comes into being on the terms of the Secretary of State or it falls through. Sir Sammuel Hoare will have the backing of British Indian opinion in declaring that Federation must mean an organic union and not a confederation. There is no more of "Dutch Auction" and the Princes' lot is therefore, a little unenviable.

The impression here is that the India Bill will be through without material alterations and that the National Government will not allow the Princes to force the issue in any way that would affect their chances at the General Election next year and that, if the National Government returns to power, it will then take up the question of setting up Federation. And there will not be many Princes who will say 'no' to the wishes of the Paramount Power.

* * *

The Wheat Import Duty and the Rice Import Duty Bill is expected to come into operation by 1st April 1935. I am told that the Government will make a statement assuring the wheat interests that, whenever, there was a threat of foreign imports, the Sea Customs Act would be used for raising the duty. The existing rate gives a margin of one rupee to local wheat and the new duty would leave a margin of four annas. This is considered ample by Government who are anxious to show to the world that their tariff wall is not unduly high.

* * *

As for broken rice, Mr. Bajpai hopes to make out an unanswerable case that no higher duty is necessary. The Education Secretary is always good at presenting his case; and one may be sure that he would not easily be beaten by the Opposition which is preparing for an onslaught.

* * *

The Finance Bill discussion has proved very useful so far. It has not only brought out the theory and practice which will guide the Finance Member; but it has made Pandit Govind Ballabh Pant make a declaration of his economic policy. The entire House was interested in his theme; because the fortunes of the Congress under the new constitution would be determined by the economic theory it preached and will follow when it is called upon to put it into effect. Though Mr. Pant did not voice the opinion of those on the European and Government benches he received congratulations from these quarters for the clear enunciation of his policy.

* * *

The fate of the Finance Bill remains yet to be determined. The Centre parties are appealing to the Congress bloc to press matters only to the extent that the budget balances permit and not ruin the prospect of carrying out these changes by radical alterations which might force the Government to certify the measure and restore the original provisions.

(FROM OUR CORRESPONDENT)

Bombay, March 20.

If speeches are events, it has been an eventful week for the Western Capital. Captains of industry have been recounting the trends of business during the year that is ended and peeping into the possibilities of the future. Two of the important commercial bodies of this city have had their annual gatherings this week. The Karachi Chamber of Commerce, too, has had its annual session, and the President covered a very wide ground ranging from the Central budget down to motor taxation. The local council continues to be in session, busy discussing the intricacies of local and municipal taxation.

Mr. G. L. Winterbotham's speech welcoming His Excellency, to the annual general meeting of the Bombay Chamber of Commerce, should get the precedence in this weekly chronicle, not only for importance of the survey he has made of the past but also for the note of cheerful optimism he struck with regard to the future. Mr. Winterbotham is not the amateur economist who will generalise on trade trends with three year figures of imports and exports. With a longer perspective, he is certain that the recovery of trade from the depths of depression has now begun, though he is far from blind, to the vicious policy of economic nationalism and the instability of the exchanges. Speaking about the Central budget, he has been able to express satisfaction that the finances have been put on a satisfactory position on the eve of the inauguration of the new constitution, so that there need no longer be the fear than the new Constitution will be wrecked on the rocks of financial stringency. On the Provincial budget, in common with the general opinion of every section of the business community, he is unable to express the same feeling of satisfaction. The relief to the tax-payers by way of removal of the surcharge on electricity, he points out, would have been more welcome. The remission of taxation imposed to meet an emergency should have the first preference if the question of relief is considered.

Referring to trade problems, he took the opportunity to remind His Excellency of the problem of diversion of traffic to the Kathiawar ports which is as pressing to-day as when Bombay first wake up to it this time last year. While on the subject of diversion of traffic he pointed out that the fears expressed in certain quarters that the Japanese importers would try to circumvent the provisions of the Indo-Japanese Agreement by importing *via* Kathiawar Ports, are somewhat exaggerated. He has, however, expressed the hope that there will not be any relaxation of the vigilance of the customs authorities. It was on the question of aerial navigation that Mr. Winterbotham was very pursuasive and pleaded for a reduction in the present high rates of air mail charges particularly on commercial documents and parcels. He suggested the introduction of flat rates to any destination in India, which he thinks will promote a greater and a wider use of the air facilities than the recent duplication and the proposed quadruplication of the air mail service will afford to the business community of India. Referring to the labour situation of the Presidency, which is one of the thorny problems of this city in view of the location of the textile mills, Mr. Winterbotham has found the Labour Officer created under the Trade Disputes Conciliation Act, very useful ; and if one can judge from the monthly reports, it is evident that during a period of comparative peace, he has been able to establish methods of conciliation on a firm basis.

Much the same spirit of optimism and cheer was in evidence in the review of Karachi trade as preasented by Mr. H. S. Bigg-Wither, the Chairman of the Karachi Chamber of Commerce, in his address at the annual general meeting. The rupee value of the total seaborne trade during the year 1934, showed an increase of over nine crore of rupees over the figures of 1933. All these facts afford satisfaction for the robust optimism expressed by the Chairman. Analysing the figure further, he has pointed out that of the increase of 9 crores more than 5 crores is due to foreign exports, which would appear to indicate a welcome change in the position of the balance of trade of that part of the country which is served by the port of Karachi. Even this increase of 5 crores, it is found on closer examination, to be due to activity in one commodity—*viz.* cotton—foreign exports of which amounted to over 1½ million bales—representing an increase of 50 per cent. over the previous record. Coastal exports account for more than 2 crores of the increase, which is, of course, due to the low rate of freight for coastal traffic allowed by the steamer companies. This increase would, however, have been more pronounced if the Steamer companies had granted rebate of 4 annas per maund in the middle of 1934, when the possibilities for a large export trade in wheat were ripe, due to the drought in the Middle West and the consequent high level of prices. Still wheat has had a record figure, so far as coasting exports are concerned, chiefly due to involuntary assistance of the steamer companies. Along with wheat, cotton has contributed to the increase in the coastal exports to a large extent. During the course of last year Cotton accounted for no less than 14½ crores out of the total exports of 24½ crores and the total seaborne trade of 48½ crores. It thus represents 59 per cent. of the total exports and 30 per cent. of the total sea-borne trade.

There is, however, one reservation that the Chairman was particular to make, while quoting these figures. Lest one should draw the inference that the general purchasing power of the people in this part of the country has risen to a high level, he pointed that this vast increase in the export and import trade is mainly due to the reduction in freight rates ; but the significance of this expansion of trade need not be belittled unduly ; and it would be worth the while of all concerned, not only to maintain the present volume of trade, but to provide for the increase that is bound to come when the Barage area comes to be extensively cultivated. Mr. Bigg-Wither has, therefore, stressed the importance of producing those qualities of cotton which are likely to be more readily marketable and disseminating information through the Agricultural Department as to what these qualities are.

Mr. H. P. Mody, as President of the Bombay Millowners' Association, had a more circumscribed field of survey. Reviewing the activities of the Association during the last year he laid emphasis on the urgent necessity of the industry to regulate its production. The danger of overproduction has been ever prominent and any attempt to increase the production still further, without regard to the certain volume of imports, would in his view throw out of gear the entire industry. Mr. Mody, therefore, urged a scheme of careful regulation of output. The returning President also drew attention to the need for keeping plant up-to-date and efficient. It need hardly be said that he did not omit to refer to the Pact with Lancashire which goes by his name. If one would over look this natural failing, one can feel gratified that Mr. Mody has stressed the need for rasing the standard of life of the masses. In common with the Chairman of the Karachi Chamber of Commerce, he urged that "it is on the raising of the standard of life of the masses that the prosperity of the textile or any other industry must ultimately depend."

NO-CONFIDENCE, AND NEVER

(FROM OUR CORRESPONDENT)

Madras, March 20.

The no-confidence motion moved by Dr. Subbarayan gives an opportunity for one of those occasional excursions into politics, without which the correspondent of a not too busy city would, indeed, be hard put to it to balance, shall I say, his weekly budget of two columns. The kaleidoscope of our local politics has been shaken somewhat violently of late: and the no-confidence motion enables us to watch the newly wrought patterns. But, perhaps, the metaphor is misleading. Madras politics, however intriguing at times—yes, intriguing, in more senses than one—is by no means so colourful as the term "kaleidoscope" would suggest. Nor is the picture of our political life at any time so schematic. It is the ease, with which, with every jerk, the little groups fall into new alignments, that lends a similitude to the politics of our council and the little contrivance carrying those bits of coloured glass. What, after all, does this motion show? The debate was without any heat or passion. The Ministers knew that they were under the strong wings of the Government. The Opposition had no illusions about the final result; and there was even talk of the *gita* ideal of duty without care for results. A rag or two was, now and again, drawn from the heaps of dirty linen to be washed on the floor of the House. Little groups chuckled at the worries they had created for the Ministers. For them, apparently, that was the be-all and end-all of their existence. There was crossing and re-crossing of the floor of the Council. Many of those, who voted for leave for motion, finally went into the Government lobby. And the result is the Ministry is as firm on the saddle, the groups as shifty, the Council as much out of touch with the country as ever. The whole affair is just an episode in the history of the Montford constitution.

Yet there are a few points which have emerged from this discussion and whose importance will survive the interest in this episode. Before the leader of the Opposition moved the vote of no-confidence the question was raised whether the Government were entitled to appoint a Government Whip and to canvass votes in the same way as the popular parties do in representative legislatures. At first it might seem only fair that the Government should have the same right as is claimed by the other parties. This would, indeed, be obvious, if the Government means the same as it does, for instance, in the British Parliament. Where the "Government" means a popular party which is in power by virtue of its constituting a majority in the elected legislative, it would certainly be entitled to follow the same tactics and plans as the Opposition. But here in India, the Government is altogether a foreign element, not only in the sense that it is composed of foreigners, but in the sense that it has little or no place in the activities of the Legislature in regard to the administration of the Transferred Half. The avowed aim of the Montford reforms was to allow the elected representatives of the people to order the affairs of the transferred half in the same way in which the House of Commons, for instance, orders the entire government of the country. If the Transferred Half is a circumscribed sphere, in which the popular legislature is to have things all its own way, it stands to reason that a Government, foreign in more senses than one, should hold aloof from the contest of the parties in the Council.

This position, the Government have refused to accept. In the statement, which Sir Hopetoun Stokes made in the Council as the Leader of the Assembly, he made it clear that Government had decided to stand by the Ministry and that they meant to claim and exercise the right of canvassing votes in the same way as the Opposition. It would appear that precedent is definitely on the side of the Government. But it is by no means clear how the Government would reconcile the provisions of the Montford reforms with their own practices in this instance. In fact, as the event proved, the Government's decision to stand by the Ministry weighted the scales heavily against the Opposition.

It might be thought that the importance of this question is transient in view of the imminence of provincial autonomy. But it would be clear on a little reflection that with provincial autonomy the foreign element will not be entirely obliterated. The powers now claimed and exercised by the Governor-in-Council might also be exerted by the Governor himself, and if the provincial constitution is to function as a system of responsible Government, it is necessary that the legislature should be free to play the game of party politics without the interference of a third party. There is no danger to the liberties of the people, if the right of sending a Whip and canvassing for votes is exercised by a ministry representing a party in the Assembly.

Though the Council is somewhat weakly put up with the statement of the position by Sir Hopetoun Stokes and though, as I said earlier, the debate was without much heat or passion, the speakers generally maintained a high standard. Dr. Subbarayan for his part, carefully refrained from overstating his case. He maintained that in moving a vote of no-confidence the Opposition was only performing its duty of trying to unseat from power a party which has ceased to mirror the public opinion. He did not make the tactical blunder of claiming for himself and his followers any more of representative character that he was prepared to grant to the ministers and their followers. The constitutional principle, which he urged in defence of his action, was that in any form of represensative government, the party in power must resign office as soon as it is clear that public opinion is no longer on its side. It might be said a Government should be immune from changes in public opinion during the legal tenure of a legislative assembly, once it is elected by popular vote. But then, in this case, the life of the Council has been extended artificially by a fiat of the Governor; and Dr. Subbarayan's task was therefore, narrowed to showing that the public is no longer disposed to give their suffrage to the justice Party. In the first place, the party itself has very nearly lost its identity. Even a colourless Administration Report of the Government refers to it as a "demoralised party" and accepts the success of Congress in the recent election as an unmistakable token of its opposition to the Justicites. The present rump, which is all that is left of the party founded by Dr. Nair and Sir P. Thyagaraya Chetty, could not even go through the formality of contesting the elections to the Assembly. In most cases, the Congress candidates were returned unopposed. Wherever a Justice candidate had the temerity to pick up the gauntlet thrown by the Congress, the result was humiliating to the Ministers. Dr. Subbarayan, therefore, contended that it was the duty of the Council to unseat the present ministers from their place of power. The consequences, which Dr. Subbarayan envisaged were, that on the resignation of the Raja of Bobbili and his colleagues, the Governor would have to send for himself, and his duty would be to confess that the council was no longer reflective of the opinion in the country and that it was his duty, as one invited to form a ministry, to suggest that the Council be dissolved and a fresh appeal made to the people.

This excursion into the field of politics due, doubtless, to a major development could, I may confess, have been a matter of necessity; for developments which are more in place in these columns are altogether lacking. There is, however, the question of the reception given by this province to the proposal of Sir Joseph Bhore for a duty of annas twelve per

STABILISATION DEFERRED

MR. CHAMBERLAIN DEFINES OFFICIAL ATTITUDE

DANGERS OF PREMATURE ACTION.

By DR. PAUL EINZIG

After a hectic week the exchanges seem to have settled down for the moment to their new provisional levels. There can be no doubt that sooner or later sterling will resume its depreciation. In the meantime, however, it has a breathing space which provides an opportunity for taking stock of the present position and future prospects. On balance, the depreciation of sterling was too moderate to make any material difference to the position of this country or other countries. The degree to which a fall of 3 per cent can in itself help or can hurt is negligible. While it widened the gap between the price levels in Great Britain and France, the difference is not sufficient to compel the French authorities to change their policy. At the same time, the fall of sterling reduced to some extent the disequilibrium between prices in Great Britain and the United States, but not nearly to a sufficient extent to induce the British Government to change its policy in this respect.

That the policy of the British Government remains exactly the same as it was before the fall in sterling is evident from the statement made by the Chancellor of the Exchequer on March 7. In this statement he repeated and amplified the reasons he gave in December last for his unwillingness to stabilise sterling in the near future. He laid stress once more upon the disequilibrium that exists between sterling and dollar on the one hand and sterling and franc on the other. He pointed out that in the circumstances to link sterling to gold would be throwing it to the mercy of the dollar and the franc. He rightly stated that any strong pressure that might arise out of this state of disequilibrium would deplete the gold reserve of this country. Once more he emphasised that there is a difference between the depreciation of the international value of a currency and its internal value, thereby suggesting by implication that the Government is not unduly worried by the depreciation of the international value of sterling so long as its internal value remains reasonably stable.

In plain English, the remarks of Mr. Neville Chamberlain mean that stabilisation is being deferred indefinitely. In addition to the necessity of eliminating the disequilibrium between sterling, dollar and franc, the Government apparently considers the present gold reserve inadequate, and regards its increase as an essential preliminary condition of the return to the gold standard. As things are, with the balance of payments barely balanced, the increase of the gold reserve will be a slow and lengthy process and it is difficult to foresee whether it will be completed by the time equilibrium between commodity prices in the three leading countries is restored. In any case, there is evidently no question of stabilisation either this year or next.

The Government's attitude towards the question came as a blow to the small group of fanatics who place international monetary stability above everything else. This group has been organising itself lately by reviving the defunct Sound Currency Association headed by Mr. D. M. Mason, M.P. The fact that the Chairman of one of the Big Five joined this society shows that it has a certain following even among practical bankers and business men. There are other curious associations and organisations which pursue more or less the same end. A society called the Friends of Economy was formed recently with the participation of at least one leading banker. The fact, however, that the weekly newspaper which represented their views and which for the past two years or so pleaded passionately for cheese-sparing economies suspended publication at the beginning of March shows that their attitude does not receive adequate support on the part of the general public. Indeed, in the eyes of the man in the street, economy cranks and "sound" currency cranks have come to be classed, together with their radical opponents the Douglasites and other shades of currency reformers, as franks and fanatics who are not to be taken too seriously.

The frontal attack of the adherents of stabilisation has suffered a complete defeat. They did not, however, lose hope. Having failed to gain admittance at the front door, they are now trying to sneak in through the back door. During the last few days several newspapers pointed out that while the Government is right in declining to link sterling with gold, it ought to stabilise sterling in relation to the dollar. They point out that after all the rate of 4.86 s not a bad rate, and the recent drop of sterling has put the American authorities into a frame of mind in which they would be prepared to consider sensible proposals. The trend of thought of those who voice such views is only too obvious. Having realised that there can be no question of linking sterling to gold they are desirous of achieving the same end in a roundabout way. Since the dollar is to all intents and purposes linked to gold, the linking of sterling to the dollar would to all intents and purposes mean linking sterling to gold. They must have a very low opinion of the mental capacity of the financial advisers of the Government to think that by such a primitive trick they can be lured into stabilising sterling without realising what they are doing.

Indeed, there is at present far less reason to stabilise sterling than there was a few weeks ago. During the past week the American authorities have made it plain that they do not at present entertain any intention of devaluing the dollar once more. This indication of their policy should encourage the British authorities in their desire to allow sterling to depreciate below 4.50 in order to restore equilibrium between British and American commodity prices. Until now, they may have been afraid that their policy might lead to a depreciation race with the United States. There is, however, at present no need for uneasiness on that account since orthodox monetary influences appear to have gained the upper hand in Washington. The British authorities should, therefore, seize this opportunity to bring about the necessary readjustment of the sterling-dollar rate to the level of equilibrium.

The attitude adopted by the countries of the Gold Bloc in face of the moderate depreciation of sterling was also calculated to discourage any desire for early stabilisation. They are, apparently, determined to entrench themselves and resist to the utmost the pressure for devaluation. To that end, they will either deflate further or they will reinforce the existing restrictions on imports. In fact, Italy has recently imposed drastic restrictions on her purchases abroad, and other countries of the Gold Bloc are likely to follow her example. In such circumstances, the maintenance of the *status quo* in the international monetary sphere inevitably leads to further shrinkage of international trade. If sterling were stabilised around its present level, it wiuld mean that the countries of the Gold Bloc would settle down to prolonged resistance to the natural influences which tend to depreciate their currencies. It would mean that the artificial trade barriers created for that purpose would be further strengthened and would become permanent institutions. It is necessary in the interest of restoring a greater freedom in the international interchange of goods to force the countries of the Gold Bloc to abandon their futile and harmful resistance. This can only be achieved by reducing their resistance *ad absurdum* through a further depreciation of sterling. If they are adamant when sterling is equal to 71½ francs, they may be willing to reconsider their attitude when sterling is at 65 francs or 60 francs. It

THE FALL IN THE £

CONTINUANCE OF CHEAP MONEY

INVESTMENT OUT LOOK

By Francis Williams, City Editor.—The Daily Herald, London.

(By Air Mail)

(Special for "INDIAN FINANCE")

London, March 12.

The stock markets, and indeed the City generally, still remain in an extremely depressed condition. This is due partly to the continued withdrawal of foreign capital from London and the decline in the exchange value of the £, and even more to fear of a gloomy Budget. This fear seems to be well founded in view of the Government's increased expenditure on armaments and the fact that, even before that expenditure was known, ordinary revenue up to date was below the estimate, while expenditure was above the estimate.

I think it may be taken as certain that all hopes of a reduction in taxation must now be abandoned.

This is bound to have a depressing effect on stock markets; and I do not think we can look for any substantial revival in activity at least until the Budget is out of the way.

As for the fall in the £, although it has been slightly checked at the moment, my view is that it will continue, although possibly not quite so sharply as recently, and I am convinced that over a period the tendency will continue downwards.

One important fact has emerged as a result of the decline. It is that according to Mr. Neville Chamberlain the Government is determined not to abandon the policy of cheap money, whatever depreciation there may be in the pound's external value.

It is now concerning itself much more with the internal value of the pound, which remains stable, than with its external value, and is not likely to be frightened into an attempt to prevent the withdrawal of funds from London by a rise in interest rate.

This is a wise decision.

Moreover, the public announcement of this policy by Mr. Neville Chamberlain should have its effect on the investment outlook. Many of the big institutional investors have lately been holding off investment in the belief that sooner or later investment yields would rise. Mr. Neville Chamberlain's new declaration of monetary policy should convince them that the Government is determined to keep interest rates low and should inspire them to start investing again, as there will be no incentive to hold on in the hope of obtaining better yields in the future.

Buying by big Institutional investors on this account may do something to offset the depression in the gilt-edged market due to Budget anxiety.

A number of big new Municipal Conversion schemes, and also fresh borrowing by Municipalities are now in contemplation, and should offer reasonably good opportunities to investors in the near future. Yields on these securities will not be high, but may be better than can be obtained by the purchase of existing stocks.

As regards the pepper gamble, to which I have previously referred, the Government has now promised that the enquiry shall be of the fullest possible nature, and the first report may be expected within a month's time.

The Government's willingness to allow the enquiry to be a thorough one has done a considerable amount to ease unsettlement in the City on this account, though the actual results of the investigation may provide some shocks.

Summing up, while I do not expect any spectacular rises in Stock Markets in the immediate future and think, indeed, that the general tone may be depressed, there should, in my opinion, be some reasonably good opportunities of sound investment very shortly.

(Continued from previous page.)

is to the interest of mankind as a whole, and not in the last place of the countries of the Gold Bloc themselves, that this intolerable "gold blocade" should be broken by means of a further depreciation of sterling. It is true that the process inflicts suffering upon the population of the countries of the Gold Bloc so long as their leaders are unwilling to adopt a realistic policy. They have, however, only themselves and their leaders to blame for it.

OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

DEFENCE ESTIMATES

With the publication of the Defence estimates, the budget for 1935-36 has put on an altogether different complexion. While formerly one looked to the course of revenue collection for an indication of the budget prospects for the coming year, it now turns out that the estimates of expenditure are by far the more important factor ; and this, it would now appear, is definitely adverse to the hard-pressed taxpayer. What little hopes there remained of the Chancellor presenting a popular budget have now been dispelled. The Government have decided that they can no longer afford to postpone a reorganisation of the defence out of reliance on the Disarmament Conference or the negotiation with foreign powers for security through international agreement. The decision has both a budgetary and political significance reaching far beyond the borders of this counry or the confines of the Empire. The political significance of this decision may be discussed later. For the present, the taxpayer is touched in his pockets. As compared with last year's estimates the Government contemplate an additional expenditure on armaments of £10,539,000. As this increase is part of a programme fixed for a long period there is no knowing what the bill may be for the next year. The Army estimates are based on a total increase in expenditure of £3,950,000. The Air estimates call for an additional outlay of £3,089,000. The increase is due to the decision to expand the Royal Air Force by 41½ squadrons by the end of 1938. Eleven of these are to be set on foot in 1935-36 ; and four have been already formed in 1934-35. As for the Navy, the first Lord of the Admiralty points out in the statement accompanying the estimates that, owing to "the cost of necessary large repairs and modernisation of battleships in view of the prolongation of their lives by the London Naval Treaty, and to the expenditure involved in partial making good deficits in defence material, stores and equipment," the increase of £2,553,604 is required in the provision for the Navy. The total increase asked for is £3,500,000.

The grand total of the Civil and Defence estimates and of those for revenue department is £490.4 million. This compares with the last year's estimate of £469. 5 million, which is inclusive of the sum of £7.6 million provided for to cover the cost of restoring the cuts in salaries and in unemployment benefit. But it will be remembered that provision has to be made for £4 million for the continuance of the subsidy to beet sugar, £1,050,000 for the continuance of the cattle subsidy and £2,459,000 for expenditure on the special areas and of grants to local authorities in distressed areas. About £3 million more will have to be found for the increased provision for unemployment assistance. It is, therefore, clear that the Chancellor will have to allow for expenditure at least £26 million above last year's budget figure. Taking other items also into account, the total of expenditure for the current year may well prove to be £731 million, as against which the estimate revenue is only £706.5 million. With four weeks of the current year still left, one's optimism cannot go further than suggest that the budget for the current year would barely be balanced.

The additional expenditure indicated for the coming year may, perhaps, be found by the automatic increase in customs and excise ; but it is certain that the Chancellor will have no relief to offer to the taxpayer.

It is from the standpoint of international politics that the Defence estimates are far more important. While the British taxpayer is not either threatened with a fresh inroad into his purse or promised further relief, the decision of the Government to set no more hopes on negotiations for disarmament brings the clouds of war which have been hovering over the world for some time nearer down to earth. For it will inevitably mean a competition in the increase of armaments, to which there is only one sequel, their use in active hostility. No one can deny either the right or the wisdom of the British Government acting as their unfettered judgment suggests. To leave the British Isles and the communication of the Empire defenceless before a world which has been increasing its armaments, and particularly air forces, would be clearly foolish ; and it is idle to expect the British Government to follow such a policy. As it is, the publication of the Defence estimate, and the provoking defence of such action has occurred just on the eve of Britain's last attempt to persuade Herr Hitler to bring Germany within the scope of an international agreement for collective security. Not only has Britain disavowed her faith in the negotiations which she is about to undertake, but she has also singled out Germany among the nations as the principal source of provocation. It is not to be expected that Herr Hitler will present the most accommodating attitude in his negotiations with his principal accuser. If the Cabinet were driven by inexorable logic to the conclusion that Britain must needs arm, and arm formidably, she could still have waited for the meeting between the Premier and the German Chancellor. The publication of the Defence estimates just on the eve of such a meeting will, unfortunately, bear the apparently uncharitable interpretation, that it is intended to sabotage the whole attempt at collective security and to goad Britain and the rest of the nations into a race in competitive armament. Pacifists in Britain are naturally enraged by the action of the Government. The question is coming up for a full dress debate in the House of Commons ; and one may be sure that the Opposition, which is against the present policy not merely on the ground that it is sponsored by the party in power but also by reason of its belief in the possibility of peace, will give the Government a hard time of it.

During the week the Labour opposition had an opportunity of airing its grievances during the debate on unemployment. On the whole, it must be confessed that the Government had the honours. It was somewhat untactical to have tabled the motion so soon after the question was discussed in the middle of February. Indeed, even Sir Herbert Samuel felt called upon to observe that "members above the gangway had nothing fresh to say but they said it remorselessly for two or three hours." The speakers on the opposition side had, in fact, very little of new points to urge. The Government, which have all along recognised that they have not been as successful as they expected, and have owned up the fiasco on unemployment insurance, have now under the pressure of repeated attacks turned, even like the proverbial worm. Mr. Oliver Stanley, to whom fell the task of defending the Government, made the best of this bad job. He followed the example set by Mr. Baldwin years ago and sought refuge from the indictment of Mr. Lansbury in an analysis of the figures of unemployment. He was able to establish that the hard core of unemployment consists of not more than 400,000 persons, the rest being either boys or girls—who are under sixteen and ought not therefore to be included among the working population—or casual labour whose employment is naturally susceptible to frequent breaks. The boys and girls under sixteen number as much as 90,000 ; and the argument that they ought to be in school, comes with somewhat ill grace from a conservative Government who would not move to keep the children of the working class population for a reasonably long period in school. Nevertheless, Mr. Stanley was able to convince the House

that the Labour indictment was over-wrought and that the unemployment situation in the country is not so grave as may be supposed from the total figures of unemployment.

U. S. A.

THE COURSE OF BUSINESS

Considerable time has elapsed since the announcement of the Supreme-Court's decision on the gold clause to enable an estimate of its effects on business sentiment and trends. While the Court was postponing from week to week the announcement of their verdict, it was possible to suggest that this delay was standing in the way of the normal improvement in business conditions and that, as soon as this uncertainty was removed, there would be a perceptible improvement in business. This expectation has now been belied. For one thing, no one seriously believed that the Supreme Court's decision would be altogether adverse or, even if it were, the Administration would not find means of circumventing it. There was, therefore, no reason to suppose that businessmen postponed orders for genuine requirements only in consideration of the uncertainty of the gold clause cases. It may, therefore, be said that the removal of the so-called uncertainty would not make any real difference. Secondly, the seasonal improvement of business conditions in spring has, on this occasion, occurred earlier ; and there was no warrant for believing that this premature beginning would not be compensated for either by a slight setback or a slowing of the pace in the rest of the season.

With the first half of March run out, it becomes possible to assess the trends of February. There was little or no gain on productive activity during this month over January. According to the National City Bank of New York, business during the month indicates a levelling of the upswing started last October. Wholesale business has made a poorer showing in most lines in February than in January. So far as Cotton Mills are concerned, far from there being any increase in production, they may be said to be even faced with the prospect of curtailment of operations. For over two months sales have fallen short of production. Unfilled orders have as a result, been cut into by the necessity of maintaining production, regardless of the pace at which sales are being maintained. It is clear that, unless business improves, mills will have to curtail output. What are the prospects then of such an improvement ?

The immediate past experience, it is true, is not much of a guide. Nevertheless, it is noteworthy that buying last autumn was late. So was Easter. There are abundant precedents for buying movements in March. If such precendents are followed during this year, then, the mills must find it possible to avoid curtailment and suspend operations. It must be remembered that on this basis the position in the textile industry is not dependent on the general business conditions to the same extent as other industries may be said to be. If buying of textile goods can emerge only as part of a wider revival, then the prospects are not very rosy. For, there is every sign that with the decision of the Supreme Court on the gold clause cases the Administration are not out of the wood. Mention has already been made in these columns of the decision of the Federal Courts in regard to section 7 (a) of the National Recovery Act and the power of the Tenesse Valley Authority to generate and sell electric power in competition with private enterprise.

There are other cases pending before other Federal Courts. There is, possibly, among the Federal Courts a general sense of resentment at the decision of the majority of the Supreme Court. They might feel that, while the Supreme Court might feel called upon to consider the general interests of the country in pronouncing their verdict on the cases before them, the Federal Courts could confine themselves to the strict interpretation of the law as it stands. It is quite on the cards that a few more adverse judgments on the lines of the Delawere and Alabhama Courts will be delivered. Business will then be at a loss to know how, and how soon, Mr. Roosevelt will be able to overcome the obstacles thus placed in his path by the Courts. These decisions will have to go ultimately to the supreme Court before they can be regarded as the last word on the law as it is. That will be quite a long time ; and it is by no means certain that, in these instances, the Supreme Court would find it possible to oblige the Administration without going against the letter of the law in the same way as they did in the case of the gold clause.

On the top of a number of difficulties within the country has come the recent depreciation of sterling. There is no mistaking the fact that this fall of the £ is quite unwelcome to the Administration. While the British Government and British economists and politicians have maintained all along that sterling is overvalued in relation to the dollar, the United States have felt that the interests of the nation would be imperilled by any rate of sterling lower than 5 dollars. In the present conditions of world trade, it is, indeed, very difficult to determine the exact value of sterling. The Administration, have therefore, preferred to form their ideas on the basis of the interests of the States rather than what may be called the merits of the question. During the time sterling has been falling to new depths, the Equalisation Fund had been active in the market trying to prevent the appreciation of the

Air Mail Week

dollar. Such attempts have been more or less wholly futile. And it is not to be supposed that the Administration will readily conclude from the failure of the efforts of the Control that the natural sterling-dollar rate is much lower than what prevailed a week or a fortnight back. The triangular contest in international finance may be relied on to continue and perhaps to reach its acutest phase during the next two months. To the extent that the uncertainties of the exchanges will be accentuated, the prospects of general recovery or the prospects of improvement in business sentiment are less. In the meanwhile, the beginnings of a fusion of American and British opinion on this question are discernible. Professor Irwin Fisher has lately responded as from the American side to the opinion expressed by Sir Henry Strakosch on the restoration of an international monetary standard, though the former lays stress on a managed standard rather than a more Gold Standard with all round-devaluation.

The present uncertainties should not weigh unduly on one's judgment of the value of the New Deal Programme. In any estimate of its true worth, it must be remembered that, when Mr. Roosevelt initiated his recovery programme, he could reasonably assume that within a year or two, the recovery of world trade would assist him to a large extent. That hope has not materialised. On the other hand, the nations have been throwing new obstacles in his path. And now the Courts are throwing their weight against him. It is not certain yet that Mr. Roosevelt will succumb to these adversities. So far as 1934 is concerned, the results are far from discouraging. Corporation reports for last year reveal mixed trends. Earnings of manufacturing and trading companies as a whole made a substantial increase, while those of railroads and public utilities generally showed declines. Eight hundred and forty companies in the former group showed an increase in total profits, less deficits, from $471,000,000 in 1933 to $673,000,000 last year, or 43 per cent. The combined net worth of these companies as on January 1, 1934, was about $13,491,000,000, and earnings are calculated after allowances for taxes and interest but before dividends.

The "Class 1" railroads, on the other hand, which in 1933 made losses to the extent of $13,801,000 after all charges, made a still more unfavourable record with a deficit of $28,600,000 in 1934—December figures estimated.

A group of forty public utility operating companies supplying electricity, gas, etc., reported a decline of 11.3 per cent. in their combined net income last year, following a decline of 16.1 per cent. the preceding year.

GERMANY

LONG-TERM INTEREST RATES

A notable feature in the economic condition of Germany in the latter months of 1934, and early this year is the successful working of the credit policy. Among the problems, that had to be tackled by the Nazi authorities in regulating the working of the credit machinery, were the questions of the payment of foreign indebtedness, provision of funds for the employment-creation programme, and the aiding of banks and other institutions in their recovery from the trade depression. With the various standstill agreements working satisfactorily, the problem of liquidation of foreign indebtedness is not so serious—at any rate, for the present. The various measures adopted for raising funds for the employment-creation programme are also yielding good results, with the result the attention of the authorities is not so much needed in this direction either. As regards the last named task, that of assisting the credit institutions, success has not been so marked, and the Nazi Government has, therefore, been directing its attention in this direction for the past few months.

In this regard, the high rate of interest for long-term loans has been an obstacle to the Banks giving credit facilities. Financing industrial investments by short-term credit is impracticable. And the high cost of German products has to be reduced, which can be done only with credit lent on easier terms. The authorities have, therefore, been devoting their attention towards reducing the rates of interest on long term loans and enabling the investment market to absorb new issues. Notable among the steps already taken may be mentioned the open market policy and the law requiring the investment of surplus corporation earnings in bonds and credits. The Banking Law of

December 1934, which, among other things, had laid down the maximum percentage of dividend that could be declared, and which had worked out in elaborate detail a scheme for the strengthening of the liquid resources and reserve position of the banking institutions, has also this object in view viz., to bring about a reduction of long-term interest rates. More important than the other measures, is the attempt to consolidate municipal debts by converting all loans at a lower rate of interest. As a result of the conversion operation in the first few weeks of the new year, certain changes are noticeable in the security and investment market. 6 per cent. bonds have approached their nominal values; other bonds have also showed a tendency to rise. This general appreciation in the prices may be taken as an indication that the bondholders are beginning to adjust themselves to the changed circumstances by anticipating, to a certain extent, a reduction in the interest rates.

The law regarding the reduction of interest rates for the credit institutions, passed in January 1935, is only the logical conclusion of the credit policy followed in the previous months. This law, which covers all bonds, including mortgage bonds and municipal obligations, offers to all owners of such bonds bearing an interest rate of 6 percent and over, facilities for conversion at a reduced interest rate of 4½ per cent. It is estimated that the relief due to this interest reduction on mortgage bonds and municipal obligations alone will amount to about 135 million reichsmarks a year. A further attempt at conversion was made last week. Among the latest batch of laws passed last week by the Cabinet is the one providing for the conversion of most of the outstanding long-term loans of Germany to a 4½ per cent. interest basis. This is only a sequel to the recent conversions of the mortgage banks bonds. In essentials, the new conversion scheme follows the same lines as the one issued a month back. All foreign and German holdings of the Reich, State and Municipal bonds, amounting to a total of about 2000 millions Reichmarks will now be converted to a 4½ per cent. basis from the present 6 per cent. basis. The only bonds, that are now exempted from the operation of these conversion offers, are bonds of Treasury Certificates falling due before December 31, 1937.

As a result of these conversion proposals, the saving in interest is estimated to be about Rs. 30 millions per annum. Considering the position of the bond and the Stock market it can safely be assumed that the conversion offer will have a good reception. The number of holders rejecting the offer is expected to be very insignificant, judging from the previous experience when the percentage of those who rejected the conversion offer was only 0.23. These bond conversions were immediately followed by a money at call which will carry the hitherto prevailing rate of 1½ per cent. Savings deposits having a legal withdrawal term will also from now carry interest at 3 per cent. instead of 3½ per cent.

JAPAN

ADJUSTMENT OF TRADE BALANCE.

It is fairly well known that Japan's export trade has received a set-back during the last few months. This is only to be expected, if only because Japanese goods are quite unwelcome all the world over. Tariff barriers, quota restrictions and similar measures have been imposed against Japan. It has, therefore, become increasingly important for Japan to conclude mutual trade agreement with neighbouring countries, if her export trade is to be maintained. Many trade delegations have been sent in the past, the most important of which being the one sent down to India and the one to the Netherlandes Indies ; and many agreements, too, have been concluded. But the problem has not ceased to cause anxiety to the Japanese authorities. The Government is, therefore, trying to adopt a more forward policy of hitting back mobilising the Foreign Trade Safeguarding Law.

A joint conference of the Foreign Office, the Department of Commerce and Industry, the Department of Agriculture and Forestry and the Finance Department was, therefore, held on February 13, to consider how the balance of trade with individual countries can be adjusted. The Conference has restricted its scope for the present to bringing about a more equal balance of imports and exports than at present existing with only three countries—Australia, Canada and Germany. The balance of trade with Australia for 1933 was unfavourable to Japan to the extent of 153,000,000 yens. The position in 1934, was not in any way better. The visit of Latham Mission was looked upon as one of the important events in the trade relations between the two countries, and though there was much talk of good-will and assistance, nothing tangible has come out, Negotiations are, however, being carried on at Canberra for a commercial treaty. According to the Foreign Office report, the negotiations are making satisfactory progress. The Australian Government, it is said, has consented to re-organise the freedom of navigation, residence, and trading including the most favoured nation clause in the new treaty. It has also signified its assent to meet Japanese demands to lower the import duties to some extent. In return, Australia demands a pledge that the Japanese government will not impose any import duty on raw

wool or increase duties on wheat and other Australian products. She even asks for a lowering of these duties.

With Germany, the heavy imports of machinery, scientific instruments and chemicals have brought about a heavy unfavourable balance. In 1934, the import surplus was estimated at 90,000,000 yens. The peculiar feature of the import from Germany is that the goods are of a special nature, essential for the development of Japanese industry, so that Japan cannot very well afford to curtail these imports. Nor can she increase her exports into that country, in view of the various economic measures in force in Germany. More than all this, Germany, ever in need of foreign currency for the liquidation of her debts is far from keen on adjusting the export surplus by more imports. The situation may, however, change in the future—now that Japan has established herself as an industrialised state. Barter arrangements have been in progress, and the recent agreement for the exchange of saya beens for German machinery and steel products may be regarded as an important achievement for Japan. It is also reported that Viscount Mushakoji, the newly appointed Japanese Ambassador in Germany, has already commenced negotiations with the German Government for further barter arrangements.

For Canada, Japan is one of the biggest buyers of lumber, pulp and wheat, and her trade with Canada is adverse to the extent of 45,000,000 yens. The position of Japan, in her relations with Canada is not so unsatisfactory as it is with other countries. As regards paper pulp, thanks to the Japanese-Manchukuo economic co-operation, Japan can obtain almost her entire requirements from this source at a much cheaper price. As for wheat, Australian wheat is not in any way inferior to Canadian wheat. The slight difference in price, is, therefore, the only consideration ; and Japan will naturally insist on having tangible advantages for purchasing the costlier Australian product. Moreover, buying more wheat from Australia would mean an increase in the unfavourable trade balance. Japan is, therefore, demanding from Canada the purchase of Japanese articles in increased quantities ; and Mr. Herbert Nailor, the Canadian Minister in Japan, it is reported, is going into the question in detail.

While the attempts that are now made to adjust the trade balances between Japan and the countries mentioned above are, no doubt, worth making, they cannot go far towards solving the crucial problem of Japanese economy, namely, the finding of markets for her industrial products. Like most other nations, Japan also aims at a substantial favourable balance of trade. But the present trends of policy more or less make it impossible for any nation to enjoy such a favourable balance. And in consideration of this, Japan might well lower her aspirations to a mere balancing of exports and imports. Surely, it would be beyond her power, or that of any country for the matter of that, to equalise imports and exports as between each pair of countries. The settlement of the balance of trade by what may be called the triangular processes of exchange is, indeed, the proper objective of trade policy. But at present, there is little or no scope for such a policy; and Japan would find before long that she would have to find the sources of her imports and the markets for her exports alike in a world outside the ring of the present American and European nations.

This suggests clearly that Japan will have to consoliate her position in Monchuko with a view to deriving her requirements of raw materials and articles which she cannot produce at home from what is virtually her own dependency. While Manchucko is, doubtless, rich in natural resources and may provide Japan with most, if not all, of the raw materials which she has now to import from other countries, the little state can by no means provide a market for her increasing industrial output. The outlet for such products will ultimately have to be found in China, and it is in this view unfortunate that Japan should have done everything to poison her relations with the republic. There are signs of a recognition among the far-seeing businessmen and politicians in Japan of the need for ultimately making up with China and working out a scheme of economic co-operation between the two countries.

The present is, perhaps, a most opportune moment for the beginning of such a policy. What Japan can gain by open hostility with China has mostly been acquired already. The little state of Manchucko has been carved out of the chaotic territory that owed allegiance to the Government at Nanking. China has been taught to regard Japan as an infinitely more powerful enemy; and it would be foolish to prolong hostilities, as such hostilities would have no definite objective. On the side of China, too, there is reason for a more friendly attitude towards Japan. After the fiasco of the League of Nation enquiry into Japanese agression, China cannot be in any doubt that she will not gain any manner of help from Europe or America. What has been lost to Japan is altogether irretrievable. The European powers are no more helpful in the realms of trade and finance than in the realm of politics. By her Silver Purchase policy America has to her credit the complete disorganisation of China's finance and currency. And the recent attempt on the part of the Chinese Government to procure help from Great Britain for the reconstruction of her currency has been so far of no avail. Nor do the negotiations leave room for hope. Japan might well step in at this hour of China's need. She might well consent to import from China raw cotton, agricultural products and iron and wool and China might in her turn agree to take from her traditional political enemy industrial products of a wide variety. If China and Japan can thus be brought together in an economic *entente cordiale* much of the tension in politics and economics alike would be relieved.

(*Continued from page 1013.*)

maund on broken rice of foreign origin. There is no mistaking the intention of the proposal. Sir Joseph Bhore has at last overcome the numerous economic and political objections he had been feeling for a long time to the prevention, to any extent or in any form, of the imports of rice from Siam and Indo-China. It will be remembered that when Madras began the agitation on the question, Sir Joseph Bhore was worried about the possibility of retaliation from the countries concerned. Latterly, the tortuous processes of diplomacy, which the Government of India had to follow in their attempts to come to an understanding in the matter of imports of rice into India, formed another pretext for delay in redressing the grievances of the South. Apparently, all this game is played out ; and the Government of India have come to the end of their tether. Their position has been continuously weakened during the last one year. The Madras Government have more than once impressed upon the Government of India the paramount necessity of affording some manner of relief to the rice-growers in the South whom they themselves had treated not too well in regard to the question of land revenue. The Crop Planning Conference had also laid stress on the need for restricting the volume of imports of foreign rice.

It has taken all this time for the Government of India to realise that there is no resisting so just a cause as this. But even at this late hour, they cannot bring themselves to make the necessary grant with grace. While South India had been asking for a prohibitive duty on all imports of rice from abroad—even Burma is not out of its mind—the Government of India have at last granted an import duty of twelve annas on broken rice. The extent of the import duty and its restriction to a particular type of rice, undoubtedly, mean that, so far as South India is concerned, she will have no appreciable relief from the hateful nightmare of the imports from Siam. The merchants here are unanimous that the duty should be raised to Re. 1-4-0 per maund on rice and annas 15 per maund on paddy and that the restriction to broken rice should be done away with. That the exporter from Siam and Indo-China will find it the easiest thing to dodge the little hurdle that Sir Joseph Bhore now proposes to place in his path is too obvious even for a brief mention.

WORLD OF INDIAN FINANCE

(*Continued from page 978.*)

If they are conceiving any plan in this regard, we may as well warn them that conception must not be too long a process ; it is time they delivered the plan. The depressed state of giltedged has also affected the Reserve Bank shares. These shares were, at one time, quoted Rs. 48 premium. We understand that there were sellers at Rs. 12 to-day. We do not know the actual amount of subscriptions which have so far been received for these shares. But there are good grounds to believe that there will be nothing like the heavy over-subscription which was once anticipated. Most of the premium on Reserve Bank shares has now melted away. This is a measure of the cooling in the enthusiasm evoked by these shares.

The exchange market has been steady but without any business. Bankers and brokers are having an enforced holiday ; and, frankly, they do not like it. On the weekly sterling day, applications for £2,628,000 at 1s. 6 1/8d., were received and allotted approximately 38 per cent.

The closing rates are: 1s. 6 3/32d., March-April 15 T. T. ; 1s. 6 1/16d., April-May T. T. ; 1s. 6 1/32d., June-July T. T. ; and 1s. 6d., August-December T. T.

Bills may be quoted: 1s. 6 3/16d., March-April ; 1s. 6 5/32d., May ; and 1s. 6 1/8d., December.

Money has been in good demand but a somewhat quieter feeling was noticed towards the finish. The quotable rate was 3 to 3¼ per cent. for interbank call money. Firms' money for call and three day's notice quoted 1 per cent. One month deposits and two month deposits quoted 1¼ per cent. ; three month deposits 1½ per cent ; and six month and twelve month deposits 1½ per cent. and 2 per cent.

THE PRINCES' REBUFF

(*Continued from page 1003.*)

The last sentence makes it clear that the Government do not propose, with the powers of the Crown as the price, to bid for the support of the Princes. The whole reply of Sir Samuel Hoare is a dignified and good-humoured rebuff but, nevertheless, a rebuff, to the claims of the Princes. British India would feel no regret, if, through this passage, the whole scheme of Federation falls through, necessitating the formation of a fresh constitution for British India. But one might still hope that the Princes will have learned an unmistakable lesson that it is futile to shake off the shackles of active Paramountcy without being ready to enter into active co-operation with the All India Federation. If there was any tinge of sincerity in their loud protestations at the Round Table Conference, they ought to be prepared to recognise that in its glory may well be mirrored their own. Even the powers of the Paramount Authority are under the constitution embodied in the Bill capable of being passed on the Federation, for as Sir Samuel Hoare points out,

> When a Ruler by his Instrument of Accession recognizes certain specified matters as Federal, the Crown, by accepting the accession, implicity assents to a modification in respect of those matters of its former relations with the States and renounces in favour of Federation any rights, authority or jurisdiction which it may hitherto have exercised in connexion with them.

It is by no means inconceivable that by accepting Federal authority over a wide range, the States might create a considerable delimitation of the sphere of active interference of the Paramount Power in the internal affairs of the State. One can only hope that the moral of this episode—it does not look like being more—will not be lost on the Princes.

JUTE AND JUTE GOODS

JUTE

Calcutta, March 21.

Due to intervening *Id* and *Holi* the market was closed for the better part of the week and consequently the turnover of business was very small. The undertone of the market was steady, but in sympathy with the decline in cotton and weaker stock markets in U.S.A. and London a decline in prices is to be expected.

It is reported that every effort is made to curtail production. In some parts sowings are suspended for want of rain ; otherwise the condition is satisfactory.

The arrivals of raw jute in port towns up to the end of February were about 77 lakhs bales the same as last year. Although the imports at the moment have very much slackened the general impression is that the actual imports up to the end of June would in no way be less than 90 lakhs of bales. This will leave the stock position at the end of the season fairly heavy. Unless sowing show a considerable decline one doubts if the fibre will really witness any substantial rise in prices and even if that is brought about by one reason or another whether it would be maintained.

Calculated at 82 2/7 lbs. to the maund and 405 lbs. to the bale.

JUTE MANUFACTURES

Calcutta, March 21.

We are between seasons and a dull market is usual at this time, added to which is the uncertainty of affairs abroad, such as fluctuations in sterling, the difficulties of the gold bloc, the opposition to the measures of the United States Government, increased armaments in France and Britain and Germany's militarism. Demand for hessians has been poor as there is little interest evinced by consuming markets.

40 inches 10 ozs. were sold in small lots for ready shipment at Rs. 11-12 basis and 2½ ozs. at Rs. 9-3 basis for March. Nothing appreciable was done in the heavy goods section.

Pucca bales were steady, with buyers keeping off on account of the firmness of loose jute. Firsts for March shipment went through at Rs. 30-12 which hardened to Rs. 31 at the beginning of the week. Tossa was sold for ready shipment at Rs. 28 and Outport Tossa at Rs. 29-12 for June.

At the end of February shipments totalled 2,996,000 bales, being 33,000 bales behind last year's figures.

U. S. A. Hessian Stocks

The following statement shows the figures of monthly stocks and consumption of hessians in the United States of America except the Pacific Coast, during February, 1935 :—

Millions of Yards.

COTTON AND COTTON GOODS

COTTON

Calcutta, March 21.

Bombay registered a decline at the week-end and Broach April-May contract closed at Rs. 223-8, after marked fluctuations inspired by New York advices following the sensational collapse of American cotton markets. On Monday last a staggering decline occurred when Broach April-May crumbled from Rs. 238-8 to Rs. 221, option dealers and bulls having been stampeded into selling. The Market tone continues to be shaky.

According to a message dated March 19, from Washington to 'Statesman' the New York *Journal of Commerce* states that a definite White House announcement on the Administration's cotton policy is shortly expected. The announcement, it is said, will make positive the fact that Government proposes to stand firm in its 12 cents loan programme and will give recognition to the fact that the continued application of the proceeding tax is hampering domestic consumption.

The New York market remains nervous with fluctuating prices indicating uncertainty. Over the week-end American middling spot at Liverpool showed a net decline of 56 points, closing at 6.49 d.

The figures just published of the International Federation of Master Cotton Spinners and Manufacturers' Associations show that the world consumption of cotton for the half-year ended January 31 increased by over 400,000 bales. Consumption of American cotton decreased over a million, whereas that of Indian cotton increased by 600,000.

COTTON GOODS

Calcutta, March 21.

After a not too substantial activity over the *Id* and *Holi* festivals the local market lapsed into dullness. The take-off from mofussil centres subsided with the end of the festivals and the market seems to have settled down to a period of slackness. Dealers are conservative in the matter of commitments, apprehending a depreciation in the value of ready goods consequent on the recent slump in prices of the raw material. Replacement is not now the attitude of the trade.

Bombay takes the same view of the situation as Calcutta, with the exception that it is inclined to be optimistic on the reasoning that rates are low enough and it is not possible for them to drop lower in view of the higher replacing rates.

Retail enquiry for British goods has been meagre, prices keeping steadily in advance of buyers.

The unsteady tendency of prices has ruled out any forward trade by Japanese interests. A small business in grey and bleached goods was done.

In the yarn section a reduction in the price of 20's to 32's Indian spinnings and 40's Japanese took place over the week-end, while the off-take of English yarns has been anything but reassuring.

During the eight months April-November, 1934, Indian mills increased production as compared with same period 1933. The grand total in yards of the quantity of woven goods was 21,95,000,000 against 19,18,000,000 in 1933 and 21,27,000 in 1932, Bengal's contribution being 98,000,000 as compared with 73,000,000 in 1933 and 62,000,000 in 1932.

The following statement of imports into Calcutta of piecegoods and yarns from overseas during January and February, as compared with the figures for the same period last year, will be of interest.

	Gr. Britain Pkgs.	Japan Pkgs.	China Pkgs.	Italy Pkgs.
Jan.-Feb. 1935 ...	13,089	24,733	3,905	292
Jan.-Feb. 1934 ...	9,969	9,882	3,002	315

	Germany Pkgs.	Other ports Pkgs.	Total Pkgs.
Jan.-Feb. 1934	37	107	23,312
Jan.-Feb. 1935	90	110	42,219

The most notable increase is in the imports from Japan. Those from Great Britain have also increased and the imports from the two countries may be compared as follows:—

Jan.-Feb. 1935	Gr. Britain Pkgs.	Japan Pkgs.
Dhooties	3,478	4,298
Greys	76	5,949
Whites	2,168	1,180

Yrans	1,870	3,193
Total ...	13,089	24,733

BULLION

GOLD

Calcutta, March 21.

The Bombay market was steady last week within narrow limits, ready ranging between Rs. 36-9-9 and Rs. 36-7-6, having been influenced by the rumours regarding Belgium joining the sterling bloc in the event of an unsatisfactory outcome of the Conference between French and Belgian authorities. There was some enquiry from foreign markets which resulted in a fair amount of business.

Stock at the week-end in Bocbay approximated 3-4 lakhs of tolas, while the daily off-take stood unchanged at 3,000 tolas.

The price of sovereign, after being quoted at Rs. 23-1 and Rs. 23-1-6 for ready and forward, closed quieter at Rs. 22-15 and Rs. 22-15-6 respectively.

London quotations, after declining from 148-10 to 147-5½, improved to 148-4, closing at 147-8: Last week's shipment by s.s. *Rajputana* amounted to Rs. 143-13 lakhs. The total imports during last week amounted to Rs. 24,986 in bar and coin.

The lowest and highest rates at Bombay at the week-end were Rs. 36-9-9 and Rs. 36-3-9 for ready; Rs. 36-10-3 and Rs. 36-4-3 for March 22 settlement and Rs. 36-11-6 and Rs. 36-5-6 for April 23 settlement.

LONDON—Air Mail Week.

The Bank of England gold reserve against notes amounted to £192,498,539 on the 27th February showing no change as compared with the previous Wednesday.

During the week the Bank announced the purchase of £22,043 in bar gold.

There has been a great deal of activity in the open market, the amount of gold which changed hands at "fixing" during the week being about £2,500,000.

Sterling showed further weakness owing to a continuation of the pressure from the Continent and, as a result, the price of gold showed sharp upward movements and fresh records have been established, the highest to date being to-day's quotation of 149s./4d.

There was a keen general demand for the amounts offered and prices have been maintained at a premium over the gold exchange parties.

Certain statements have appeared in the Press implying that as the price has been fixed on supply and demand there has recently been a change in the procedure of "fixing" the gold price; this is certainly not the case as the price has always been fixed from the fact that owing to the violently fluctuating exchanges, it was not always possible to give an estimate of the "premium," which a section of the press is so keen to indicate. We should like to emphasize that this "premium" is not an official quotation, but is solely a calculation (made after the "fixing") of the excess which buyers have paid over the price at which an arbitrage purchase would have been possible. For example, to-day, if one were to take the French exchange rate at the time when the price was fixed as being 70.3/4, it would theoretically have been possible to buy gold at 148s./6d., sell francs and ship to the Bank of France, with a slight profit. As the price was fixed at 149s./4d., this would have been quoted as including a 10d. "premium" over franc parity.

SILVER

Calcutta, March 21.

Movements in the price of silver in Bombay last week were erratic, but the undertone remained firm on the news that the American Government featured every day as a prominent buyer in the London Market. There is an inclination on the part of the bulls to take profits on account of aproaching settlement deliveries. The price of ready, after opening at the week-end at Rs. 65-4, closed at Rs. 65-8.

Stocks continue heavy, being estimated at about 19,000 bars, while the daily off-take stands at about 20 bars.

In Shanghai the dollar declined from 1/7½ to 1/7⅛, but improved to 1/7½ and closed at 1/7⅜.

In Bombay the highest and the lowest rates were Rs. 65-11 and Rs. 64-10 for ready. Rs. 72-12 and Rs. 71-12 for March 23 settlemeent and Rs. 73-2 and Rs. 72-1 for April 23, settleent.

Total imports during last week amounted to 55 bars and Rs. 83,158 in coins.

London Air Mail week:

The market has been very active and prices made a rapid advance during the past week. The weakness of sterling has been a factor, but confidence in the outlook for silver has been manifest and a general bullish feeling resulted in competitive bying, whilst the market had to depend mainly on re-sales for supplies.

Demand was particularly heavy on the 2nd instant when buying for America and general speculative buying caused a rise of 15/16d. and 7/8d. respectively in the cash and two months quotations, which were fixed at 27d. and 27.1/16d.; a further advance of 1/8d. on the 4th instant to 27.1/8d. and 27.3/16d. raised prices to the highest level reached since August, 1928.

With sterling showing some recovery yesterday and a decline in the China exchanges, there was a sharp reaction a large amount of speculative re-selling being in evidence, but the movement was not altogether unexpected in view of the rapidity with which prices had advanced.

The Indian Bazaars and China have been active, both buying and selling, although the wide movements rendered some limits ineffective.

The market is rather unsettled and it is possible that there may be further wide fluctuations, but the undertone remains firm.

In presenting his Budget proposals on February 28th, the Indian Finance member stated that the duty on silver imported into India was to be reduced from 6 annas to 2 annas per ounce. A reduction had been generally anticipated by Indian operators and the effect of the announcement had, to a large extent, been discounted.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 25th ultimo. to mid-day on the 4th instant:—

Imports	£
British India	45,236

SUGAR

WORLD SUGAR MARKET

A Semarang report dated March 4, states:—

In the interim export, business in Java has been practically confined to sales of Browns to Japanese buyers—although prices and shipment positions have not been made known, we believe that some of the sales have been for far forward delivery, covering a speculative movement from Japan. About 36,000 tons were reported sold to Japan as per sales lists.

The market for other destinations has been extremely disappointing, and the demand appears to have subsided without any indications as to when any renewed interest might be looked for. The continued bullish advices from London and New York and the advanced prices established in those markets have not had any apparent effect on our consuming markets.

The Indian market has been under pressure of selling of the nearby shipments by second hands, as stocks have been accumulating, and the change in the sugar duties did not eventuate, which was expected in some circles, and on which a certain amount of speculative buying of the nearer shipments was encouraged. In the meantime the record fall in sterling exchange puts Java prices right out of line, and if any improvement came about in India we should not be able to take any advantage of it under the present circumstances. From our general information we cannot look for any renewal in this demand until May or June at the earliest, and then for the further forward shipments.

The local market is almost stagnant with practically no demand from the nearby islands, and a minimum offtake for the Straits.

The China market remains aloof, and that market is unsettled as to prices owing to the heavy fluctuations in the silver exchange the exchange rate on Java advancing since the beginning of February about 10 cents per dollar for Hongkong and Shanghai.

The total sales by the Nivas since our last review were:—

Total of 10,148 tons Whites of which only about 4,000 tons for export.

40,613 tons Browns of which 36,000 tons to Japanese buyers and about 2,500 tons for China.

618 tons Molasses Sugar (off quality sugar). No change has been announced in selling prices.

British India. Indian Crop. On the 15th February the Sugar Technologist cabled the final forecast for the growing crop as 5,085,000 tons from an acreage of 3,471,000 acres. The previous forecasts were:—

27th August 1934 ... ... 3,409,000 acres.
26th October, 1934 ... ... 3,444,000 ,,

At the present more interest is taken in the production of sugar from cane, by the mills, than in the total as above of all sources of supply, which it is generally known is very difficult to give an accurate estimate..

Karachi reports that a fair business was concluded in British and Continental Refined during the temporary boom in that market. In the meantime we have had no advices of business from any of the Indian ports.

We quote prices nominal about 5/10½ per cwt. CIF main ports for shipments to June.

London.—Terminal Raws have advanced about 3d. per cwt. since the beginning of February. Sterling, however, in this period declined from 4.88 to 4.77⅛ on New York and from F. 7.23¾ to F. 7.00½ on Amsterdam, so that sugar itself has gained little or nothing in comparison. The same can be said of the prices for Raws c.i.f. U. K. which have fluctuated within narrow limits. Sales were reported early in February at 4/2¾ per cwt. c.i.f. advancing slowly in stages of ¼d. per cwt. On the 25th the market was easier with sellers predominating, but a sharp change took effect on the 26th when all offerings totalling 18,000 tons were taken out of the market at 4/4½. Since then sales were reported at 4/5¼, and our latest advices quote sellers from 4/9 to 4/7½ c.i.f. with limited offerings.

Buyers prices on London Terminal Raws were:—

February	11th	... 4/2½	4/4	4/6	4/8
,,	18th	... 4/1⅝	4/3⅛	4/5⅝	4/7½
,,	28th	... 4/3⅛	4/5¼	4/7⅛	4/9¼
March	2nd	... 4/5	4/6⅝	4/8⅝	4/10⅝

New York.—During February the prices for Raws and Futures have advanced appreciably. Early in February sales of Cubans were reported at 1.85 for prompt shipment, and later sales made up to 2.00 cents for March shipment. Porto Ricos and Philippines have also sold at better prices.

The more important sales reported were:—

		Tons

Manila.—A report of the 31st January advises that the quantity of sugar which the Philippines can export in 1935 has been officially fixed at 524,606 tons basis 96s. Exporters entered the market during the past two weeks for sugar produced from Centrals whose audits have been completed. Only small quantities changed hands however, holders being unwilling to sell to any extent at present prices.

The quotation for Centrifugals 96s. was P. 6.26 p. picul ex godown.

Shipments to the end of January were ... 12,964 tons
against last year ... 331,245 ,,

Exchange.—Sterling continued to decline heavily, declining 20 cents per £ since the middle of February. To-day's Banks buying rate for 3 days sight drafts on London quoted at F. 6.96 per £ establishing the lowest rate on record to date.

With a view to test the feasibility or otherwise of crushing cane by zemindars living in remote cane-growing tracts, the U. P. Government has taken over at a cost of Rs. 1,70,000 an old sugar factory at Dharamnagari, in the Bijnor district. The factory has been remodelled and if the experiment proves successful it will help zemindars to process their own canes instead of carting them long distances to large factories.

TEA

Calcutta, March 21.

The export market, for which there was a small quantity on offer, comprising a poor selection of "end of the season" types, was particularly firm for leaf grades, which advanced 3 to 6 pies.

With a strong market offerings for internal consumption were small. Prices, specially of leaf goods, maintained an upward tendency. Dusts were generally dearer.

There was good demand for good liquoring blends at last week's sales of Indian tea in London during which 40,140 packages of Northern Indian Tea and 6,395 packages from South India were offered.

The following are the full particulars of Sale No. 36.

	1935	1934
Tea with Export Rights.		
Offered	988	1,643

Ceylon—

At the London auctions on March 19, 19,000 packages of Ceylon tea were submitted for sale.

There was an active demand for the offerings. Good mediums realized good prices while other sorts showed little change.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 10¼d., to-day's auction 10½d. lb.; Common Broken Pekoe last auction 10½d., to-day's auction 10½d. lb.; Common Orange Pekoe last auction 10½d., to-day's auction 10¾d. lb.; Common Broken Orange Pekoe last auction 10½d., to-day's auction 11d. lb.

The following were the value prices:—

Clean Common Pekoe last auction 10½d., to-day's auction 10⅝d. lb.; Clean Common Broken Pekoe last auction 10⅝d., to-day's auction 10⅝d. lb.; Clean Common Orange Pekoe last auction 11d., to-day's auction 11d. lb.; Clean Common Broken Orange Pekoe last auction 11d. to-day's auction 11⅛d. lb.

The Exports of the Indian Tea from Northern Indian from 1st April to 12th March have been as follows:—

SHELLAC

Calcutta, Mar. 21.

The settlement in Mincing Lane on March 9, in connection with shellac for March delivery was effected without defaults, according to the *Financial Times*. The settlement called for the payment of about £25,000 representing the 25 per cent. deposit due on 20,000 packages, plus differencees on the agreed price of 68s. per cwt. The balanec (£75,000) will fall due in about a month's time.

The negotiations for pooling stocks not in the big holding backed by Dean Finance are continuing. Long term finance will be necessary if the final settlement for March delivery is to be carried through successfully.

London stocks on March 8 totalled 302,382 packages which is about 12,000 packages less than the high record recently reached.

On March 18, T.N. Shellac spot (London) was 70s. to 72s. 6d.: same for May 70s. On the following day T.N. Shellac spot dropped to 50s. to 55s. The Committee of the London Shellac Trade Association fixed on March 19 the spot price of T.N. Shellac at 50s. to 55s. per cwt.

Shipments from Calcutta during February last fell off compared with the same month the year previous as given below:—

GROUNDNUTS

Madras, March 20.

It was expected that the market would improve on the basis of a comparitively smaller crop this season. As a matter of fact, prices have receded further. Over the week-end, opening at Madras at £14-3-9 for March and £14-5-0 for April, the rates for Coromondel Machined declined to £12-17-6 and £13 for March and April shipments respectively.

Shippers, buying limits fell from Rs. 37-15-0 for Machined and Rs. 33 for Ordinary to Rs. 33-4-0 for Machined and Rs. 29 for Ordinary, per French Candy, in coast godowns.

The Guntur crop is said to be doing well and will be ready for the market in a fortnight, but in the Kamalapuram area and the Ceded Districts it has been affected by continued drought.

COUNTRY PRODUCE.

Myrobalans.—Jubbulpore average at Re. 1-5-0 per md. Jubbulpore No. 1 at Re. 1-10 per md. Crushed No. 1 at Rs. 2-6 per md. nominal.

METAL MARKET

Messrs. Balmer Lawrie and Co., in their metal market report for the week ended March 19, say:—

Galvd. Corr. Sheets.—There is no change in market conditions to report, and less business than usual has been transacted due to the intervening holidays.

Sectional Material.—There was a slight increase in business transacted towards the middle of last week, and the market showed signs of improving. Due to the holidays business fell off again at the end of the week.

STATISTICAL INFORMATION

RAILWAY TRAFFIC

Latest Earnings and Working Expenses

The total approximate gross earnings from 1st April, 1934, to 2nd March, 1935, amount to Rs. 82.20 crores or Rs. 313 lakhs more than the actuals for the corresponding period of the previous year and Rs. 552 lakhs more than the actuals for the corresponding period of 1932-33.

The following are the up-to-date approximate gross earnings and working expenses of the State-owned railways from 1st April, 1934, as compared with the actuals of the corresponding period of last year :—

Railways.	Gross Earnings. Up to 9-2-34 (in lakhs)	Gross Earnings. Up to 9-2-35 (in lakhs)	Ordinary Working Expenses* Up to 31-12-33 (in lakhs)	Ordinary Working Expenses* Up to 31-12-34 (in lakhs)

Total ...	7,292	7,624	3,561	3,619

* Includes suspense but excludes appropriation to and from depreciation fund.

A comparison with the figures of the previous week for the principal State-owned railways shows Decreases in the approximate gross earnings of all railways except the A. B., B. B. & C. I., Burma, E. I., N. W. and Tirhoot and Lucknow-Bareilly. A comparison with the actuals of the corresponding week of 1934 shows Decreases in the approximate gross earnings of all the principal State-owned railways except the E. I., S. I., and Tirhoot and Lucknow-Bareilly.

Wagon Loadings

Comparisons of figures of wagon loadings on Class I Railways for the week ending 2nd March, 1935, and for the cumulative period from 1st April, 1934, to 2nd March, 1935, with the corresponding periods of the previous year are as follows:—

During the week ending 2nd March, 1935, there were loaded on the broad gauge 92,085 wagons, being 5,392 more than in the corresponding week of the previous year, or an increase of 6.22 per cent. On the metre gauge there were loaded 65,294 wagons, being 10,195 more than in the corresponding week of the previous year, or an increase of 18.5 per cent.

For the period from 1st April to 2nd March, 1935, there were loaded on the broad gauge 3,822,109 wagons, being 217,848 more than in the corresponding period of the previous year, or an increase of 6.04 per cent., and on the metre gauge 2,435,534 wagons, being 159,107 more than in the corresponding period of the previous year, or an increase of 6.99 per cent.

TRADE OF BURMA

The total trade of the province of Burma, both imports and exports, foreign and casting combined, duirng January last, increased from Rs. 5,68.87 lakhs to Rs. 6,83.97 lakhs. The foreign import trade increased from Rs. 90.81 lakhs to Rs. 96.10 lakhs, while the foreign export trade remained practically the same as that of the previous January, i.e., Rs. 1,41.36 lakhs. Coasting imports and exports both increased from Rs. 93.67 lakhs and Rs. 2,43.02 lakhs to Rs. 1,16.74 lakhs and Rs. 3,29.77 lakhs, respectively.

The progressive total of imports and exports, foreign and coasting combined, for ten ten months ended January, 1935, increased from Rs. 51,41.33 lakhs to Rs. 55,56.04 lakhs. The progressive total of foreign trade, both imports and exports, for the ten months including January, 1935, decreased from Rs. 20,99.54 lakhs to Rs. 20,32.05 lakhs, while that of the coasting trade of both imports and exports increased from Rs. 30,41.79 lakhs to Rs. 35,23.99 lakhs.

ORIENTAL ASSURANCE

The amount of new business in 1934 of the Oriental Government Security Life Assurance Company, Limited, was 42,378 Policies assuring Rs. 7,62,42,761 as compared with 38,191 Policies assuring Rs. 7,04,26,203 in 1933. This is an increase of 4,187 Policies assuring Rs. 58,16,558.

MONTHLY REVIEW OF TRADE AND FINANCE

Vol. No. XV. JANUARY, 1935.

The trade returns for January, 1935, make on the whole a cheerful reading. For both imports and exports have shown a very appreciable increase both as compared with the previous month and as compared with the corresponding month of the previous year. And considered from the standpoint of the various commodities entering into our foreign trade, the principal items of exports and imports have also shown an improvement. The staple exports, for which we provide in this Supplement the statistics of foreign trade, show in most cases an improvement both in quantity and in value. Of imports, it is hardly necessary to add that they show a significant expansion. If one overlooks for the moment, the crucial question of the balance of trade in merchandise or in merchandise and treasure, and if one attaches importance to what may be called the turnover at our ports, it is, indeed, a matter for great satisfaction that exports during the month of January amounted to Rs. 13.35 crores against Rs. 11.74 crores in the month of December, 1934 and Rs. 11.39 crores in the month of January, 1934. That is, as compared with December last, January shows an increase of 13.6 per cent. and as compared with January, 1934, the increase is even greater at 17.2 per cent. As regards imports into India, India had Rs. 12.89 crores of foreign goods during January as against Rs. 10.35 crores in December last and Rs. 10.67 crores in January, 1934. To repeat the same bases of comparison imports show an increase of 24.5 per cent. as compared with December and an increase of 20.8 per cent. as compared with January, 1934. These percentage increases in exports and imports show clearly what we have been stressing over a long period, that the rate of acceleration in case of imports is far more than in the case of exports. While we are not among those who have an unreasonable prejudice against all imports as such, we must affirm again that this tendency of expansion in imports being greater than expansion in exports is an unhealthy one. We would like a member of the Assembly to move a resolution in the House somewhat on the analogy of the famous Dunning's motion that "imports have increased, are increasing and ought to be diminished." The effect of this disproportionate increase in imports, which is clearly traceable to the new orientation of our fiscal policy, shows that our foreign trade and balance of payments position is becoming increasingly adverse to us.

The relative position of exports and imports in our foreign trade and their differential gains in the recovery, which is, to all intents and purposes, under way, are more clearly perceived when the figures of the ten months period are scrutinised. Imports during the period April, 1934, to Jan., 1935 amounted to Rs. 109.25 crores against Rs. 95.96 crores in the corresponding period of the previous year. Exports on the other hand, increased from only Rs. 119.46 crores to Rs. 123.10 crores. Thus during this ten month period the increase in exports is only Rs. 3.64 crores as against an increase of Rs. 13.29 crores in imports. In terms of percentage imports have increased by 13.8 per cent. while exports have had only an increase of 3 per cent.

Treasure on private account including currency notes showed a net export of Rs. 4.65 crores in January, 1935 as against Rs. 6.02 crores in the preceding month and Rs. 5.90 crores in January, 1934. Taking the ten month period exports of gold amounted to 43.32 crores for 1934-35 as a gainst 42.48 crores in 1933-34. The imports amounted to Rs. 60 lakhs and Rs. 89 lakhs respectively Exports of silver during the two periods amounted to Rs. 126 lakhs and Rs. 69 lakhs respectively.

Measured by the statistics of merchandise and treasure the total visible balance of trade in January, 1935, was Rs. 5,43 lakhs in favour of India as compared with Rs. 7,97 lakhs in December, 1934 and Rs. 6,90 lakhs in January, 1934. During the ten months ending January, 1935 the visible balance of trade in merchandise and treasure was Rs. 61,65 lakhs in favour of India compared with Rs. 68,35 lakhs in the corresponding period of the preceding year. The balance of remittances of funds in January, 1935 was *minus* Rs. 10,16 lakhs and in the ten months ending January, 1935, *minus* Rs. 41,91 lakhs.

STATISTICAL DATA FOR JANUARY, 1935.

*Weekly average returns.

As compared with January, 1934 the imports of food, drink and tobacco in January, 1935 decreased by Rs. 13 lakhs to Rs. 1,19 lakhs, while those of raw materials increased by Rs. 35 lakhs to Rs. 1,68 lakhs and of manufactured articles by Rs. 2,02 lakhs to Rs. 9,78 lakhs. Under food, drink and tobacco, imports of sugar 16 D.S. and above (including beet) fell from 26,000 tons to 13,000 tons and in value from Rs. 26 lakhs to Rs. 12 lakhs. Imports of rise, not in the husk recorded a decrease, having amounted to 6,000 tons (Rs. 4 lakhs) as compared with 20,000 tons (Rs. 11 lakhs) in January, 1934, Under raw materials, the imports of kerosene oil rose by 3,077,000 gallons to 8,629,000 gallons in quantity and by Rs. 14 lakhs to Rs. 34 lakhs in value. Imports of mineral oils other than kerosene also rose to 13 million gallons valued at Rs. 33 lakhs, which meant an improvement of 4 million gallons in quantity and of Rs. 3 lakhs in value. Raw cotton (chiefly imported from Kenya Colony, Egypt and the United Kingdom) showed an increase of 2,000 tons in quantity and of Rs. 21 lakhs in value and stood at 5,100 tons valued at Rs. 45 lakhs. Under manufactured articles, imports of cotton yarn and manufactures rose by Rs. 63 lakhs. Under cotton piecegoods, all the three descriptions recorded increases both in quantity and value. Grey, white and coloured goods rose respectively from 12, 21 and 24 million yards to 31, 27 and 34 million yards in quantity and in value from Rs. 18 lakhs, Rs. 41 lakhs and Rs. 50 lakhs to Rs. 40 lakhs, Rs. 53 lakhs and Rs. 73 lakhs. Under machinery and mill work, Primemovers, Sewing and Knitting machines, Electrical and Textile machineries showed marked improvements. Imports of Primemovers advanced from Rs. 10 lakhs to Rs. 16 lakhs, sewing machines from Rs. 4 lakhs to Rs. 17 lakhs and Electrical and Textile machineries each improved by Rs. 9 lakhs from Rs. 14 lakhs and Rs. 23 lakhs respectively. The number of motor cars imported amounted to 1,249 and that of motor lorries, buses and vans to 499 as against 753 and 357 respectively in January, 1934. The value of motor cars imported in January, 1935 amounted to Rs. 23 lakhs and that of motor lorries, buses and vans to Rs. 7 lakhs as compared with Rs. 15 lakhs and Rs. 4 lakhs respectively in the corresponding month of the preceding year. There were noticeable increases under woollen manufactures (+Rs. 7 lakhs), copper, wrought (+Rs. 9 lakhs), artificial silk piecegoods (+Rs. 11 lakhs) and electrical instruments (+Rs. 7 lakhs), while there were decreases under silk, raw and piecegoods (−Rs. 9 lakhs), soap (−Rs. 4 lakhs) and steel bars (−Rs. 3 lakhs).

Compared with January, 1934, exports of food, drink and tobacco in January, 1935 rose by Rs. 14 lakhs to Rs. 2,71 lakhs. Shipments of rice, not in the husk, increased from 77,000 tons to 94,000 tons in quantity and from Rs. 51 lakhs to Rs. 62 lakhs in value. Shipments of wheat advanced from 166 tons to 239 tons in quantity and from Rs. 24,000 to Rs. 36,000 in value. Exports of barley improved from only 13 tons to 752 tons in quantity and from Rs. 1,000 to Rs. 54,000 in value. The exports of tea rose from 24.5 million lbs. to 27.7 million lbs. in quantity but the value remained almost the same and amounted to Rs. 1,64 lakhs. Exports of raw tobacco declined from 1.8 million lbs. to 1.3 millions lbs. in quantity and from Rs. 5 lakhs to Rs. 3 lakhs in value. Raw materials and produce exported increased by Rs. 1,73 lakhs to Rs. 7,29 lakhs. Under this group shipments of raw cotton advanced from 43,000 tons to 63,000 tons in quantity and from Rs. 2,14 lakhs to Rs. 3,70 lakhs in value. Of the total shipments of 63,000 tons, Japan, the highest purchaser, took 41,000 tons or 65 per cent., Italy 5,500 tons, the United Kingdom 4,400 tons, Belgium and France 3,000 tons each, Germany 1,600 tons, the reminder being despatched mainly to Greece, the Netherlands, Spain and China. Consignments of raw jute increased from 66,000 tons to 86,000 tons in quantity and from Rs. 31 lakhs to Rs. 1,28 lakhs in value. Exports of lac dropped from 84,000 cwts. to 48,000 cwts. in quantity and from Rs. lakhs to Rs. 26 lakhs in value. Shipments of oilseeds shrunk in quantity from 60,000 tons to 31,000 tons and from Rs. 66 lakhs to Rs. 41 lakhs in value. Despatches of linseed fell from 18,000 tons to 4,000 tons in quantity and from Rs. 21 lakhs to Rs. 6 lakhs in value and those of groundnuts from 34,000 tons to 20,000 tons in quantity and from Rs. 35 lakhs to Rs. 26 lakhs in value. Rapeseed declined from 3,000 tons valued at Rs. 3¼ lakhs to 1,000 tons valued at Rs. 1¼ lakhs. Sesamum (til or jinjili) dropped from 1,600 tons valued at Rs. 2 lakhs to only 79 tons valued at Rs. 19,000. Castor seed showed an

(*Continued from page 3*)

Shipments of paraffin wax fell from 5,000 tons valued at Rs. 22 lakhs to 3,000 tons valued at Rs. 13 lakhs.

The share of the United Kingdom in imports increased from 41 per cent. in January, 1934 to 43 per cent. in January, 1935 while that in exports decreased from 37 per cent. to 30 per cent. The shares of Germany, Japan and the United States of America in the month under report were 7, 17 and 6 per cent. respectively under imports, and 5, 20 and 9 per cent. under exports.

The tonnage of vessels entered into British India and cleared with cargoes from and to foreign countries and British Possessions during the month of January, 1935 amounted to 701,000 and 741,000 respectively. The corresponding figures were returned at 673,000 and 656,000 in December, 1934 and 644,000 and 620,000 a year ago. During the ten months ending January, 1935 the tonnage of vessels entered and cleared with cargoes amounted respectively to 6,546,000 and 6,672,000 as compared with 6,036,000 and 6,338,000 in the corresponding period of the preceding year.

Indian Finance

Investor's Supplement

Vol. XV. No. 15 SATURDAY, MARCH 23, 1935 Price Re. 1

NO EYES, NO EARS, NO HEART

It has been a week of disaster. The bear had as *gala* a time as he had known since the cataclysm of the Spring of 1933.

At the time of writing, the fall, precipitate as it has been, looks like gathering momentum. There is, surely, no sign of any arrest of the decline.

Early in the week, there was a widespread and confident feeling that further expansion of currency for Rs. 3 crores was imminent. No such expansion has been effected so far.

The developments in Germany furnished added velocity to the fall. London markets had a setback in prices more as a precautionary manouvre than as the result of an understanding of the full implications of Germany's gesture. Political circles remain non-committal. Market circles have, however, marked down prices in the belief that this forewarning by Germany needed a forearming by markets.

Even before London markets opened, the Indian markets took a like precautionary move. 3½ per cent. Rupee Paper, which is to-day the barometer of markets, has been falling down and down till it has touched Rs. 93 sellers at the time these notes are written.

UNCERTAINTIES CONTINUE

Giltedged Flat

(Special Cable)

By Mr. R. Gordon Cummings

London, March 21.

Giltedged flat on political and monetary uncertainties.

Other markets firm.

Steels recovered after earlier weakness induced by Belgian developments.

I advise buying of British Celanese Second Preference.

From Rs. 98-8 to Rs. 93 in three weeks, is a catastrophic fall. The nerves of the market are shattered. There is real panic.

Money is tight as h-l, as a banker said to us. Hades has more cheerful persons at the moment than have the Indian markets. Bitter gloom and apprehensions of the worst possible developments prevail.

Indian Finance would be willing and able to give some cheer if it had faith in the credit operations of the Government and confidence in their policy and intentions. It has no such faith, no such confidence.

Government has been defined as a soulless corporation. Whatever it be about the 'soul' business, it is clear that it has no eyes to see market developments, no ears to hear market representations, and no heart to sympathise with the sad plight of those who trusted them and their securities.

We have reasons to believe that the Finance Member does read *Indian Finance*. Evidently, its strong pleas for timely and effective action have left him cold.

If the Finance Member were in the busy throngs of Calcutta and Bombay, instead of in the cosy comfort of New Delhi, he would know that the views of *Indian Finance* have the backing of the entire banking and financial world. The whole of India thinks the way *Indian Finance* thinks. But Sir James Grigg is the man whose thinking counts. And he does not think *Indian Finance* way.

For the *n*th time, we repeat that

1. There should be immediate expansion for at least Rs. 5 crores.

2. There should be purchases of 3½ per cent. Rupee Paper for at least Rs. 1 crore.

If this is not done, the disaster in store will be more crushing than that now experienced. And it will be a disaster that will involve not only the markets but the Finance Member himself and his precious hopes for the future.

Action on the lines we advocate is needed because

(*a*) Developments in Germany do not and cannot portend war. But they are bad enough shocks. They will and do upset. Buf such upsetting must be temporary. It is the duty of the Government to mitigate the adverse effects of factors which have, however, only temporary influence.

(*b*) The Reserve Bank shares mean a tying-up of considerable sums of money for a month or more. In such situations, the Bank of England authorities would have adopted measures to offset the stringency thereby produced. Sir James swears by Britain. Why does he not do what the Bank of England is sure to have done in like circumstances.

(*c*) The market has a surfeit of scrip in 3½ per cent. Paper. It cannot digest it. Unless the Government take away a crore or a crore and a half of the floating scrips, every bearish event will tend to have exaggerated value. It is the Government and the Imperial Bank who flooded the market with the scrip. It is up to them to drain it in time.

Worth-While Investments :

INDIA:

PROOF AGAINST ALL SHOCKS

TRITON SHARES

By "Watch-dog"

The Triton Insurance Company (Managing Agents—Messrs. Jardine Skinner and Company) is, perhaps, unrivalled in the world for the strength of its reserves in proportion alike to capital and to business underwritten annually. That the shares of such a company are quoting at a level which gives an yield of 4.4 per cent. tax-free is a circumstance which the prudent investor should take full and timely advantage of.

Insurance companies, as a rule, do not look back ; they always look forward. They have hardly any setbacks ; they are like snow-balls that must grow larger and larger. Given integrity of management, prudence in investment, care in expenditure and selectiveness in business, no insurance company can simply help growing fast and faster.

Funds grow ; incomes grow ; and dividends are, periodically, increased. This is the normal story of insurance business.

Banks can have fluctuations of fortune ; they may have their prosperous years, their lean years ; they may find it hard to keep profits on an even basis if they had not ample funds hid up their sleeves. Bank shares may, accordingly, rise and fall.

But Insurance shares have a more or less uninterrupted upward trend. This is why the yield on first-class insurance shares is but fractonally higher than that on first-grade giltedge.

If we can say, in broad terms, that the yield on Indian Government Securities (taking an average between short-term and long-term) is $3\frac{1}{2}$ per cent. subject to tax, the yield of 4.4 per cent. tax-free on Triton shares is more than $1\frac{1}{4}$ per cent. higher than that on giltedge. When investors realise the full significance of this factor, there should be such a demand for these shares that the margin now forthcoming must be rapidly narrowed.

I am convinced that Triton shares are one of the few investments which can be most confidently recommended as being generally independent of shocks in domestic or international finance and as being assured of substantial capital appreciation and steadily though slowly increased dividends.

The Triton transacts general insurance business and has the advantage of being associated with a firm which has clean and substantial business of its own ; of management by one of the most knowledgeable of underwriters in India, namely, Mr. J. W. J. Levien ; and of a wellspread network of influential agents.

The capital of the Company is Rs. 5.75 lakhs. The smallness of capital would have been, in earlier years, a disadvantage if a powerful firm like Jardine Skinners had not been behind it. But it is now more than made up by the strength of the reserves which are more than seven times the capital—a unique position for a general insurance company. And, by the way in which the Company's reserves have been built up, the small-sized capital is the most favourable feature from the point of view of shareholders, as dividend distribution works out to a proportionately higher percentage.

The Company has always been particular about the quality of business ; quantitative standards have never made an appeal to it.

The premium income for the last three years is as follows :

1931	...	Rs. 6.91 lakhs
1932	...	,, 6.52 ,,
1933	...	,, 6.57 ,,

The usual practice with general insurance companies is to maintain a reserve of 40 per cent. for unexpired risks plus an additional reserve for unforeseen contingencies. The two reserves are, on the average, on the basis of 100 per cent. A company, whose 40 per cent. reserve for unexpired risks and additional reserve work out to 200 per cent., would be considered to have an extra-ordinarily strong position.

What are we to say of a company whose reserves are 700 per cent. of premium ! Superlatives seem stale and pale !

Let me set out, in resplendent array, the full list and measure of the reserves :—

	Rs. in lakhs
Reserve against Depreciation of investments	3.00
General Reserve for Exceptional Losses	26.75
General Reserve Fund	4.50
Accident Reserve Fund	1.00
Underwriting Suspense Account ...	3.13
Reserve against Depreciation of investments	3.00
Total ...	38.38

These are the published reserves. They are ample enough, in all conscience. There is yet another reserve which is not published and which must be looked for on the assets side. I have made a somewhat cursory valuation of the Government of India securities held by the Company ; and there is, in relation to current market rates, an excess of at least Rs. 5 lakhs over book-value.

There are so many reserves and such strong reserves that any further allocations from the profits of future years are unthinkable.

You cannot add to the Investment Depreciation Reserve when your giltedge portfolio shows an inner reserve of Rs. 5 lakhs, can you ? This statement is true of every other reserve.

The only reserve, with which a little of manouvering has been possible, is the Underwriting Suspense Account. In 1931, Rs. 50,000 was transferred from this account to profit and loss account ; in 1932, Rs. 20,000 was so transferred ; in 1933, there was reversal of this procedure, and Rs. 30,000 was set aside from profits in favour of the Underwriting Suspense Account.

Why was there this reversal ? This account is intended to deal with such of the claims of the previous years as could not be ascertained at last closing. These claims were Rs. 30,724 in 1931 ; Rs. 20,029 in 1932 ; and Rs. 27,078 in 1933. There has, thus, been no change in regard to these claims. This means that the allocations made in respect of this account in 1931 or 1932 must have been adhered to in 1933.

The reason for the reversal of the earlier procedure is, in my opinion, the unwillingness of the directors and managing agents to increase the dividend over 40 per cent.

If the procedure of 1932 had been followed, the amount available for dividend distribution in 1933 would have been increased by Rs. 50,000. This should have meant a dividend of 48 per cent.

It will, therefore, be seen that the dividend-paying capacity of the Company is actually higher than the dividend paid. This may be taken as a circumstance which surely heralds higher dividends in the near future.

The Triton shares are Rs. 25 paid up. The current market rate is Rs. 228. The annual dividend is Rs. 10 per share tax-free. Rs. 10 on a share quoting Rs. 228 works out to an yield of 4.4 per cent. free of income tax.

Of the Triton, I can say that it has had a great past, it has a greater present and it will have a far greater future.

The balance-sheet of the Triton has always thrilled me; the making of the analysis of its accounts has given me vast pleasure; and I hope that those who act on this tip will experience the thrill and pleasure in a more concrete measure as they see their holdings soar in value and yield increasing dividends.

INVESTMENT BREVITIES

A shareholder writes:

The Champaran Sugar Company has got a share capital of Rs. 12 lakhs, and a debenture loan of Rs. 6,00,000 in bonds of Rs. 500 each bearing interest at the rate of 7 per cent., per annum, re-issued on September 1, 1931 to be redeemed on September 1, 1951. The Company, however, has got an option of redemption on or after September 1, 1936, at a premium of Rs. 3 per cent. on three month's notice. Now I beg to request the agents to redeem the debenture loan of Rs. 6,00,000 on September 1, 1936, out of the next profits. The Company will thereby save annas five pies seven per share per year by ceasing to unnecessarily pay interest at the rate of 7 per cent. per annum.

The Company has got a net block account of Rs. 30 lakhs (after allocating Rs. 18,31,000 as depreciation thereon) against a capital of Rs. 12,00,000. The Company has a borrowed capital in terms of liabilities, loans, etc., of Rs. 16,20,000 over and above the said debenture loan and against this borrowed capital, the Company possesses liquid assets to the extent of Rs. 17,08,000 out of which sum Rs. 8,20,000 represent sugar and molasses stock but now sold.

Having so much credit as well as liquid resources at its disposal, the Company can, without much difficulty, redeem the debenture loan even now. But I propose to redeem the same out of the profits of the coming two years, ending June 1935 and June 1936. If the company makes a profit of Rs. 6,00,000 by June 1935 as compared with a profit of Rs. 8,00,000 in the year ending June 1933, I have to propose to set aside the entire sum as Debenture Sinking Fund to be paid in 1936. If the Company does not allocate any depreciation this year, it does not matter and the shareholders would not object if a dividend of annas 8 per share were paid from the Reserve Fund which would absorb Rs. 60,000 only.

The rate of 7 per annum paid by a first-class concern in these days of cheap money is absurd. The debenture holders will be well satisfied when they will get a premium of Rs. 3 per cent.

At the present rate, a shareholder of moderate means having 500 shares is paying Rs. 14-8 per month, or nearly annas eight per day, unnecessarily by way of interest on the debenture loan unwanted, no doubt, from September 1 1936.

I hope, this useful suggestion to the agents as well as to the shareholders will not go in vain.

* * *

As I hinted the other day, the British India Corporation (Cawnpore) has declared a dividend on ordinary shares. There will be no more arrears of dividend on preference shares; and ordinaries get two annas per share (or 12½ per cent.). On adjustments, the 1934 profits are Rs. 18.06 lakhs. Including the carry forward, the available sum is Rs. 23.08 lakhs. Rs. 2.50 lakhs goes towards depreciation; Rs. 9.72 lakhs is absorbed in preference dividend; Rs. 5.52 lakhs in ordinary dividend. The carry-over is Rs. 5.34 lakhs.

* * *

The Chairman's speech must have heartened shareholders. The profit has increased from Rs. 13.62 lakhs in 1933 to Rs. 18.06 lakhs in 1934. Carry-forward is increased from Rs. 5.02 lakhs to Rs. 5.35 lakhs. The balance-sheet position of the Company is very satisfactory; and the earnings, too, make good showing.

The Company is fortunate in getting the co-operation on the Board of Sir Badridas Goenka. It is most valuable strengthening.

* * *

The Bombay Telephone Company has been making heady progress. Its earnings have shown, year by year, substantial growth. This is one of the best public utility shares which investors can pick up. The following statement is eloquent commentary on its growth:

	Total December 31		
	1932	1933	1934
Exchange Lines ...	9,947	10,780	11,959
Service Exchange Lines ...	94	97	110
Private Lines ...	498	535	604
Service Private Lines ...	2	2	2
External Extensions ...	543	533	536
Internal Extensions ...	2,610	2,937	3,167
Service Internal Extensions ...	10	11	16

* * *

Who can say after this that Bombay has not definitely turned the corner? Shareholders of Bombay Telephone are fortunate because subscribers to Bombay telephone are happy. There is no per message system. It is a flat rate. When shall we have this system once again in Calcutta?

* * *

Last week, I said that I don't like the look of things. This week, I like it less. Markets are burning; Nero is fiddling.

* * * * *

Anyway shrewd investors should be on the sharp look-out. When the fall looks like being arrested, then would be the time to pick up better-class securities. Rebound, there is bound to be. The long view of giltedge remains unchanged from the standpoint of domestic factors.

Worth-While Investments:

BRITAIN:

STAVELEY COAL AND IRON COMPANY

By R. Gordon Cummings

This company, registered as far back as 1863, is now one of the biggest and certainly one of the most prosperous concerns of its kind in this country. In addition to owning numerous coal and iron-ore mines in Derbyshire, Lincolnshire, Leicestershire, Northamptonshire, Nottinghamshire and Yorkshire, Staveley Coal owns a salt works near Crewe, operates an electric generating station, supplying over 9,000 consumers, and by-products plants, brick-works, etc., together with the control of three subsidiaries and joint interests in other concerns. Productions of the company include coal, pig-iron, coke, cast iron and sand spun pipes, benzole (marketed by National Benzole Co.), bricks, sulphuric acid, aniline, mirbane oil, chlorine, bleaching powder, tar-macadam, salt, etc.

The capital structure is extremely simple, there being but one class of share and no debenture or loan indebtedness. Up to June 1907 the capital was only £600,000, but since then the authorised amount has grown to £4,000,000, of which £3,385,356 is now issued in £1 ordinary shares on which dividends are paid in February and September. The latest issue of shares, apart from those allotted to employees, was 463,773 ordinary in February 1925, at 25s. each. Shareholders were given the right to apply for these in ratio to their old holdings.

For many years satisfactory profits have been earned; and, as shown by the following table, there has been only one poor year during the last decade.

Little comment is necessary on the figures for the ten years ended June 30th, 1934, as these tell their own story.

	Net Profit after tax Before Depreciation		After Depreciation	Percentage on ordinary Tax free Earned	Paid		To General Reserve
	£		£				£
1925	A		279,136	9.0	7½		Nil.
1926	A	B.	78,588	2.4	5	M.	80,000
1927	A		244,978	7.4	7½		Nil.
1928	A		204,723	6.5	5		Nil.
1929	A	B.	266,118	7.9	5		100,000
1930	401,867		266,094	7.9	6		75,000
1931	425,623		286,130	8.5	6		75,000
1932	365,626		219,280	6.5	5		50,000
1933	398,153		230,668	6.8	5	C.	60,000
1934	462,522		274,774	8.1	6½	C.	60,000

A. Not disclosed.

B. After £40,000 in both 1926 and 1929 to additions and renewals account.

C. Including £10,000 in both 1933 and 1934 for further depreciation of workmen's houses.

M. In 1926 £80,000 taken from taxation and contingency reserve.

On account of the year ended 30 June next, the interim dividend has been raised from 2½% as distributed for many years past to 3% free of income tax. This increased payment certainly indicates a higher final when the report is published in September next.

A strong financial and liquid position has been maintained for many years. Summarised balance-sheets for the last two years ended 30th June, 1934 are appended.

	1934.	1933.
Assets—		
Properties, etc	3,376,487	3,428,855
Subsidiaries—Shares ...	764,703	764,703
Other Cos.—Investments ...	322,583	322,583
Advances, etc. (net)	82,317	74,366
Liquid Assets	1,166,805	1,009,244
Total	5,712,895	5,599,751
Liabilities—		
Capital	3,385,356	3,385,356
Creditors, etc.	840,717	800,785
Reserves—General	1,000,000	950,000
Depreciation	572,409	572,409
Insurance, etc. ...	311,131	282,645
P. & L. Balance	103,282	108,556
Total	5,712,895	5,599,751

In 1929 the assets of the company were revalued and at June 30, of that year they were given in the balance-sheet at £3,584,622. From the five years since that date considerable additions have been made to properties, etc. ; but over this period no less than £776,845 has been written off for depreciation. An additional source of strength is the reserves and undivided profits totalling almost £2,000,000.

It would be difficult to find a company in any part of the world which has such excellent technical and administrative management. Development of the large number of by-products manufactured has arisen from research work on the part of the company's staff with a view to reducing all waste to a minimum. This is one of the reasons why satisfactory profits have been earned during recent poor trading years. Staveley Coal has a prosperous future ; and in view of the remarks above regarding the increased interim dividend of 3 per cent. there is every prospect of a higher distribution for the whole of the current year.

The £1 ordinary shares are quoted at 39s. and even assuming that the dividend for the year ending 30 June next is only made up to 6½% tax free, the gross yield will be over 4¼%. A final dividend of at least 4½% can, however, be expected, so that the indicated yield is practically 5% gross. Should a Final of 5% be forthcoming the gross yield would be 5¼%. The shares are accordingly a sound investment offering scope for capital appreciation over the next six months.

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

March 22, 1935.

Friday Morning,

The Stock Exchange was entirely closed for three days from Monday to Wednesday, this week, on account of the Holi festival. Consequently we are reviewing the market practically on one day's trading.

All sections of this market opened with a subdued tone on Thursday after the holidays and in the majority of instances more selling was in evidence. Government Securities eased off further owing to the news of German rearmament. Jute Mills shares were also weaker in sympathy and cottons remained neglected while only a limited business was reported in Coals at about last levels.

With the exception of Sugar Mills shares, which kept somewhat steady there was nothing of any interest in Miscellaneous Industrials. Teas continued dull and uninteresting.

Government Securities.—On the news of the military developments in Germany an all round uneasiness was created and as a result, Securities market weakened considerably. 3½ per cent. Government Paper which sagged to Rs. 95 from a quotation of Rs. 96-2 during the holidays, opened yesterday at Rs. 94-8 but as the session progressed more sellers appeared and the rate eased off further to Rs. 93-15 during the course of the day. 3½ per cent. Loan 1947-50 also was marked down to Rs. 101-13 ; 4 per cent. Loan 1960/70 to Rs. 106-10 ; and 5 per cent. Loan 1945-55 to Rs. 116-10. 3 per cent. Loan 1941 is now quoted at Rs. 100-14, 5 per cent. Loan 1939/44 at Rs. 107-12 and 1940/43 at Rs. 109-2 ; 5½ per cent. Loan 1938/44 changed hands at Rs. 107-10. The tendency at the time of writing is towards lower levels and there are more sellers than buyers at the moment. The Bank rate remained unchanged at 3½ per cent.

Fixed Interest Bearing Securities.—The enquiry for Preference shares was rather on a restricted scale than has been the case quite recently. Anglo-India (Pref.) was marked at Rs. 156 ; Reliance Preference at the same figure ; Burn & Co. 7 per cent. Preference changed hands at Rs. 130. No business was reported in Debentures up to the time of writing these notes. Calcutta Port Trust and Municipal issues, were, however, on offer.

Other Investment Stocks.—Imperial Bank's shares were quotably lower. The paid up issues may be placed at Rs. 1,580 and Contributories at Rs. 387. Central Bank's shares may be quoted at Rs. 37 ex-dividend. Bengal Central Bank's changed hands at Rs. 9/10 ex-dividend.

No business was reported in any Insurance Companies' shares, while in Transport Companies, a fair turnover resulted in Light Railways' shares. Government guaranteed issues changed hands on the basis of Rs. 92 ; but shares enjoying District Board subsidies remained rather neglected.

Among Shipping companies, Bengal Assam Steamships (ordy.) was marked at Rs. 225, Calcutta Landing and Shipping at Rs. 15-2 and India General Navigation (ordy.) at Rs. 113-8.

Cottons.—This section continued dull and neglected. Dunbar (ordy.) was marked down to Rs. 102

from a quotation of Rs. 136 on the publication of the report for the half-year ended 31st December 1934, which was considered unsatisfactory. There are sellers for Bowreah (ordy.) and New Ring (ordy.) at below quotation rates, but no buyers appeared. Bengal Nagpur (ordy.) may be placed at Rs. 17-8.

Coals.—A moderate number of dealings was reported in Coal shares at about unchanged rates. Bengal changed hands at Rs. 267 but later improved to Rs. 272 Burrakur (ordy.) was marked at Rs. 13-4 ; Bokaro and Ramghur at Rs. 8-14 ; East Indian at Rs. 17-12, Hurriladih at Rs. 16-6 ; New Manbhum at Rs. 65-6 ; Rewa at Rs. 14-10 and Sendra at Rs. 13-8. Reports of Accounts of Rewa Coalfields have been published and provide a satisfactory reading. A dividend at the rate of annas six per share for the half-year just closed has been recommended against the actual distribution of annas four per share for the previous half-year. Raisings and despatches of coal also showed improvement.

Jutes.—Jute mills shares opened quiet and ruled weaker during the period under review. Commodity markets were easier ; 9 porters hessians are now quoted at Rs. 9-5 without much business passing, while Heavy goods are also quiet. Jute was quoted at Rs. 30-12 at the close. Howrahs opened at Rs. 62-1 but as the session advanced, sellers predominated and the rate sagged to Rs. 61-12 at the time of writing. Clive was marked down to Rs. 35-10 ; National to Rs. 25-12 ; Reliance to Rs. 80 and Presidency to Rs. 5-9.

Among higher priced stocks, quotations are now 15 to 20 points below those ruling before holidays.

Anglo Indias are now quoted at Rs. 520 ; Ballys at Rs. 250 ; Barnagores at Rs. 195 ; Champadany at Rs. 200 ; Cheviot at Rs. 225 ; Dalhousies at Rs. 420 ; Fort Williams at Rs. 380 ; Fort Gloster at Rs. 700 ; Gourepore at Rs. 775 ; India at Rs. 460 ; Kamarhatty at Rs. 605 and Nuddea at Rs. 66 and Union at Rs. 538.

We do not see much fall in prices at the moment and operators are advised to pick better class stocks which have fallen considerably as the dividend time for March closing is approaching nearer.

Electricals.—Only a small business was reported in Public Utility companies shares. Rawalpindi Electrics changed hands at Rs. 32-8 ex-dividend and United Provinces at Rs. 160-8.

Engineering.—This section was also rather subdued. Arthur Butler (ordy.) was marked down to Rs. 12-8. Bengal Iron was easier at Rs. 4-4 and Indian Iron and Steel at Rs. 7-2. Indian Standard Wagon (ordy.) recorded a deal at Rs. 64 and Marshalls changed hands at Rs. 1-6.

Miscellaneous.—Nothing of any interest falls to be reported here. B. I. Corporation (ordy.) changed hands in fair quantities round Rs. 2-13 ex-dividend Indian Wood Products were mentioned at Rs. 33-8 and Indian Cables at Rs. 3-13. Titaghur Paper (ordy.) recorded a deal at Rs. 20-8 and Midnapore Zemindar (ordy.) at Rs. 70.

Sugars.—The improvement recorded in this section recently has been maintained and a fair business was reported at full rates. Balarampur changed hands at Rs. 22 ; Bulsund at Rs. 12-4 ; Carew & Co. at Rs. 20-8 ; Cawnpore (ordy.) at Rs. 35 ; Purtobpore (ordy.) at Rs. 15 and Samastipore Central at Rs. 11.

Teas.—Dull conditions have obtained in this section, and enquiries were on a very limited scale. Reports for the season 1934 so far appearing are on the whole unsatisfactory in consideration of lower prices realised in Tea sales both in London and locally. It is rumoured that duties may be increased in the coming British Budget on Teas outside the restrictive scheme in order to assist the producers in India and Ceylon. If this materialises a better outlook is assured.

Friday's Report

The market has developed a further weakness this afternoon and an all round easier feeling pervailed.

Government Securities.—3½% Rupee Paper receded further to Rs. 92-3 on weaker advices from Bombay, but recovered again to Rs. 92-15. 4% Loan (1960-70) were marked down to Rs. 105 in a day's trading—from a quotation of Rs. 106-6. 3½% Loan (1947-50) are now quoted at 101-7 against Rs. 101-11 ; 3% Loan (1941), however, kept steady at Rs. 100-12 and 5% Loan (1940-43) at Rs. 109-3. The close was, however, steady.

Jutes.—In sympathy with easier commodity markets, and owing to lack of support from outside, Jute Mill Shares ruled quiet a turn easier—Howrahs and Kamarhattys, the two barometer stocks receded further to Rs. 60-13 and Rs. 598 respectively. Clive was marked at Rs. 35-3, and Nationals at Rs. 25.

Among bigger denominations, Anglo-India receded further to Rs. 508, Auckland to Rs. 245, Bally to Rs. 140 Barnagore to Rs. 190, and Champdany to Rs. 197. Fort Williams sagged to Rs. 365 but again recovered to 373 at the time of writing.

India changed hands at Rs. 440. Kanknarrah may be placed at Rs. 510. Lansdowne was quoted at Rs. 200 and Union at Rs. 533. Towards the close a slight recovery in prices was registered and Howrahs were remarked at Rs. 61-6. The closing tone was slightly better.

Coals.—Only limited business was put through in Coal. Bengal was marked down to Rs. 266 ; Bengal Nagpur changed hands at Rs. 47 ; Equitable (Ordy.) at Rs. 35-12, East Indian at Rs. 18, Rewa at Rs. 14-10 Standard at Rs. 30-8 ex-dividend, and west Jamuria at Rs. 12-8. Amnng lower priced stocks, Mundulpore were dealt in at Rs. 6-10, and South Karanpura at Rs. 5-8.

Miscellaneous.—Only a moderate number of dealings were reported in miscellaneous industrials at about last levels. B. I. Corporation (Ordy.) changed hands in fair quantities at round about Rs. 2-14 ex-dividend. Burma Corporation was easier on London advices. Indian Wood Products was marked at Rs. 13-10. Sugar shares were well supported and a fair turn-over resulted at hardening rates.

MADRAS STOCK EXCHANGE.

(By Wire)

(FROM OUR CORRESPONDENT)

Madras, March 22, 1935.

Government Securities.—The securities market was extremely erratic during the period under reviw owing to tight money conditions. The market fell to Rs. 96-8 from previous levels and were ruling steady at this price. Disturbing political news from Central Europe and the consequent increase in armament proposals by France and other countries led to nervous feeling on European bourses. There was a sharp set back in India sterling loans on the London market and this added to the tight money conditions in this country brought about a precipitate fall in Rupee Paper. The market was in an overloaded position for some weeks past and the fall of two points should have wiped off a number of speculators; but the market after recovering to Rs. 95 fell to Rs. 94-4. It shows that weak bull elements are not yet well out of the picture and the market had no time to adjust itself in regard to other securities which are being quoted nominally, considerably low prics, at which last business was done. Mysore Loans which

used to be a bright feature have become the Cindrella of the market and have been uncared for owing to the nervous feeling displayed in the Giltedge section. No enquiry could be expected for Municipal and Port Trust Debentures whilst Joint Stock Company debentures were neglected.

Fixed Interest Securities.—The Preference share market has been lively with a number of deals reported in Premier Hosiery at Rs. 11 ; Vasantas at Rs. 107 ; Buckinghams and Carnatics at Rs. 155 and Spencers 8 per cent. Preferences at Rs. 13, showing practically no change over last quoted levels.

Banks.—Banks have been prejudicially affected by selling for finding money for applications for the Reserve Bank of India shares and by the general weakness displayed by the Securities market. Imperials have lost 50 points for the fully paids whilst the contributories also fell correspondingly. Bank of Indias showed remarkable steadiness at Rs. 123, all lots of offering being absorbed by this market. Central banks were another weak feature losing about 2½ points on the week closing at Rs. 37. At lower prices, a number of deals has taken place. In Indian Banks, scarcity of scrips continued, whilst Indo-Commercial Bank 'B' shares improved further to Rs. 27.

Public Utilities.—This section continued firm with a good enquiry for Vellores and West Coast Electrics, both of which were done at Rs. 13¼ and 8 annas premium respectively with buyers over. East Tanjores also noted some deals at Rs. 105 whilst Rangoon Telephones were taken up at Rs. 13-12 cum dividend ; Trichy Srirangams were easier at Rs. 200 with sellers.

Mills.—The earlier disturbing news from America that the American Government may not continue the loans to farmers and the general unsettled political conditions in Europe lead to heavy selling of raw cotton in Bombay. Cotton touched Rs. 208 but sharply recovered to Rs. 219 on news from authoritative sources on the continuance of the American policy.

Textiles.—These shares followed the fortunes of Raw cotton but on the whole closed unsteady with the exception of Cambodias and Premier Hosiery. Deals included Buckinghams, Maduras, Cambodias, Kaleswarars, Vasantas and Premier Hosierys.

Sugars.—The Local market has been extremely active with several deals reported in Deccans at Rs. 302; Mysores at Rs. 28-12 and India Sugars at par. Buland Sugars also noted a deal at Rs. 13-14.

Cements.—This section was not so active and business was restricted to Bundis, Punjabs and Coimbatores, of which Coimbatores also were popular at Rs. 187.

Planting.—Rubber Market was neglected with some sellers in evidence on the marking down in the price of raw rubber.

Tea shares were no better with isolated deals reported in Vellamalais at Rs. 8-8 and Peria Karamalais at Rs. 39.

Miscellaneous.—This section was notable for the falls sustained in Tata Steels. Amongst local shares, United Breweries and Malabar Matches were noted deals.

LONDON STOCK EXCHANGE

Weakness prevailed in most sections of the Stock Exchange and prices were generally on the downward trend. Giltedge was quiet and dull and was quoted low throughout the week except for one day when it improved with the improvement in sterling. On the last day of the week under review 3½ per cent. Indian Stock 1931 was quoted at 94½, 4½ per cent. 1958/68 at 117, 2½ per cent. Consols at 85¾, 3½ per cent. Conversion at 105½ and 3½ per cent. War Loan at 105½.

Among other sections Teas and Rubbers were unchanged.

Oils were sometimes quoted higher.

Home Rails were the feature of the week and were quoted higher.

Industrials were quiet and showed few price changes.

BOMBAY STOCK EXCHANGE.

(*By Wire*)

(FROM OUR CORRESPONDENT)

Bombay, March 22, 1935.

Friday Evening,

Call money was quoted 4½ per cent. (borrowers).

Tight money conditions, weak selling advices from London and panicky conditions left the share market weak and dull. There was a precipitous fall in the quotation of 3½ per cent. paper and it is quoted at the time of writing at Rs. 92/13. Other Government securities also declined in sympathy. 3 per cent. 1941 was quoted at Rs. 100-8 ; 3½ per cent. 1947-50 at Rs. 101-10 ; 5 per cent. 1945-55 at Rs. 116-6 ; 6½ per cent. Treasury Bonds at Rs. 101-12.

Banks.—Imperial Banks were quoted low, the fully paids at Rs. 1,560 and Contributories at Rs. 385. Central Banks were lower at Rs. 35 ex-dividend and Bank of Indias at Rs. 121-4.

Mills.—The affection was prevalent here also to some extent. Bombay Dyeings were quoted at Rs. 886-4, Centuries at Rs. 287-8 ; Gokaks at Rs. 210; Mysores at Rs. 108-12 and Vishnus at Rs. 1,540.

Cements.—These shares were easy with Indias being quoted at Rs. 427/8, Katnis at Rs. 415 ; Bundis at Rs. 46/8 and Gwaliors at Rs. 128/12.

Hydro-Electrics.—These were a shade easier with Andhra Valleys quoting at Rs. 1,665 and Tata Powers at Rs. 1601/4.

Miscellaneous.—Bombay Telephones were quoted Rs. 117/8 ; Belapurs at Rs. 310 and Bombay Steams at Rs. 297/8.

Among Insurance shares Jupiters were quoted at Rs. 12/12 and New India Assurance at Rs. 42/8.

CALCUTTA

ADVERSE FACTORS IN STOCK MARKETS

OUTLOOK OF INDUSTRIALS

PARADOX OF GOLD & GOLD SHARE PRICES

By R. Gordon Cummings.

Special for "INDIAN FINANCE"

By Air Mail

London, March 12, 1935.

Taking account of all the adverse factors exerting their influence during the past week, stock markets have held up remarkably well. Principal factors, which have tended to reduce business and bring down prices, have been violent currency fluctuations, large withdrawals of foreign funds from London, the proposed increase in the strength of the British fighting services, political developments abroad, unencouraging budgetary estimates for the coming year, which practically preclude any reduction in income tax, and substantial selling on the part of weak speculators and bears. An additional factor, which did not help matters, was that last week saw the end of a three-week account with a consequent selling on the part of short-term speculators.

Apart from political news, the main features of interest have been the violent fluctuations in sterling and gold. To give some idea of these fluctuations, the dollar was as low as 4.86⅛ on February 28, but since then it has been up to 4.71½ (March 6), while over the same period the franc has risen from 73¼ to a highest of almost 70½. Between these two limits sharp fluctuations have been seen each day. In the case of gold, this was quoted at 147s. 10½d. per ounce on Tuesday, March 5; 149s. 4d. on Wednesday; 148s. 10d. on Thursday; 148s. 3½d. on Friday; 147s. 5½d. on Saturday; and 148s. 4d. on Monday.

It is no wonder, therefore, that considerable uncertainty was on the increase until a re-assuring statement as to the future of sterling was made by the Chancellor of the Exchequer. Following this statement, there was a sharp recovery in sterling.

Turning to individual markets, gilt-edged and India stocks are firmer after earlier sharp losses. Amongst foreign bonds, German issues have been decidedly weak on fears of a moratorium; but Brazilian stocks after continued unsettlement close much firmer on news that agreement is to be reached on commercial debts with Brazil.

Home Railways have not been strong, although prices seem to have grounded for the time being.

There has been some heavy liquidation in industrial shares, but, despite a paucity of buying orders, falls have not been exceptionally great. At the time of writing markets have a firmer appearance, particularly amongst leading issues such as Courtaulds, Imperial Tobacco, Distillers, and London Brick. On several encouraging statements, iron, coal and steel shares are better, but motor shares are not so active as a week ago. Under the lead of *Faireys*, aviation shares have firmed up, while armament issues have risen on the "fighting" estimates.

After uncertainty on the Mexican Eagle announcement, oil shares are recovering. Dealings in Mexican and Canadian Eagles are temporarily suspended. On a set-back in the commodity to below 6d. per lb. rubber shares have fallen away, but not to any considerable extent.

Mining issues, particularly dividend paying Kaffirs, have been the only bright feature. Venterspot have jumped to 21s., West Witwatersrand to 57s. 6d. and *Lace Proprietary* to 44s. After some temporary uncertainty prices are firming up all round. Copper and tin shares remain steady.

The new account has opened firmly, although with few changes. The carry-over has disclosed a strong bear position in certain industrials.

Gold, Exchanges and Stock Markets

I have given above a brief summary of the fluctuations to which sterling and gold have been subjected during the last few days. It is not to be wondered at, therefore, that both investors and speculators have been adopting a cautious attitude, although it has not been so much from pressure of selling but from a lack of strong buying that we have seen falling prices. It is, indeed, a sign of strength that, despite these factors and forced selling on the part of interests supposed to be connected with recent commodity troubles, prices have not fallen to much lower levels.

Confidence in sterling has now been partially regained, at least at home; and despite the imminence of the Budget I shall not be surprised to see a small rally in gilt-edged stocks. Arguments to the contrary apart, the weight of money awaiting investment cannot but help to have an effect on prices, for people cannot afford to leave their money for any length of time on deposit at a nominal rate of interest.

The outlook for industrials is far from poor; and I am certain that the present is a favourable time to pick up the leading shares at bargain prices. Purchasers of *Imperial Tobacco* at 133s. 6d., *British-American Tobacco* at 117s., *Carreras* at 152s., *Dunlops* at 48s. 9d., *Courtaulds* at 50s., *J. & P. Coats* at 66s., *Distillers* at 91s., *Watney Combe Reid* at 66s., and *London Brick* at 81s., should do very well over the next few months. Certain more speculative shares, such as *Electric and Musical Industries* at 29s. 9d. and *United Molasses* at 19s. offer scope for sharp recovery.

Encouragement as to the outlook can be taken from the statement of the Chairman at the annual meeting of *Courtaulds*, the leading rayon manufacturing company. The Chairman pointed out that almost £1,400,000 mere spent on extensions during 1934, and showing the faith of the Board in the future of the industry, developments are already in hand which will cost practically another £6,000,000 over the next two years. It has been decided to erect a new Viscose yarn factory at Preston, which will add at least another 30 per cent. to present production. Not only will these extensions be a benefit to the company, but they will help Great Britain as a nation, from the increase in employment which will ensue.

In subsequent notes I deal with the satisfactory announcements recently published by a number of companies in a wide variety of industries. *The outlook, therefore, for British industrial shares is not quite so black as it would appear from recent market movements.*

From Strength to Strength

Fresh records were again broken by the *Prudential Assurance Company* during 1934, the latest report shewing an increase of over £13,000,000 to £290,524,340 in total assets. Income for the year from all sources was £50,858,348, an increase of £667,083 over 1933, and just under one million pounds per week.

Including £1,069,280 brought forward the surplus on life business was £10,028,128, this being

allocated as to: £6,344,288 to bonuses on policies, £1,125,000 to profit and loss account for dividends on A shares, £651,622 to staff bonuses, £298,500 to special contingency fund, and £1,608,808 carried forward. From the general branch surplus of £209,655, there is transferred to reserves £67,620, to income tax account £20,500, and to profit and loss account for dividends £100,000, while the balance carried forward is increased by £21,535 to £230,393.

Since my first recommendation Prudential £1 A shares have falltn to £34 ex dividend and the 4s. paid up B shares to 94s. ex dividend. These declines have been due to general market conditions. I see no reason to change my opinion that they are both promising lock-up investments.

Eastern Banking Profits

Further expansion in profits during 1934 is shewn by the accounts of *Eastern Bank*, which has branches in India and other Eastern countries. As for the previous three years, a final dividend of 3s. is proposed on the 200,000 £10 shares, on which £5 per share is paid up, making 6 per cent. for the fourth successive year. This time, however, to celebrate the bank's twenty-fifth anniversary, a bonus of 3 per cent. is to be distributed. After setting aside £40,000 (£55,000 in 1933) to contingencies account, a balance of £51,767, compared with £51,761, is to be carried forward, so that after taking account of the £90,000 required for dividends, profits for the year to December 31, 1934 are £130,006, against £125,525 in 1933, £121,944 in 1932, and a recent low record of £116,694 in 1930. The £5 paid shares are quoted at 148s. to yield over 4 per cent. on a 6 per cent. dividend basis. For a number of years up to 1930, 9 per cent. per annum dividends were paid. If the present improvement continues, a return to this basis can soon be looked for.

Net profits of *Hongkong and Shanghai Banking Corporation* for the twelve months to December 31, 1934, were $13,004,697, against $15,206,625 in 1933. The dividend for the year is again maintained at £6 on each $125 share, now quoted at £131, the amount required in currency being $12,109,653. After writing $1,000,000 ($1,500,000 in 1933) off premises, the balance carried forward is $3,294,701, againts $3,462,728 brought in.

Electrical Trade Recovery

For the year to 31 December, 1934, *English Electric Company*, which manufactures all kinds of electrical and other machinery, earned a profit of £81,902, after charging all expenses and debenture interest, but before providing for depreciation. Considering that this is only the second time a profit has been earned in the past nine years—the last occasion was £34,086 in 1931—and that a loss of £267,837 was incurred in 1933, the recovery is £267,837 was incurred in 1933, the recovery is remarkably good. After providing £50,000 (against nothing in the two previous years) for depreciation, the debit balance of £277,270 brought in is reduced to £245,368. In June, 1930, the capital was drastically reconstructed, but so far no dividends have been paid on either the 6½ per cent. £1 preference, or the £1 ordinary shares. As from January 1, 1934 preference dividends are cumulative, so that the current price of 11s. 9d. for these shares includes over twelve months' arrears. They are a healthy speculation.

The improved results of English Electric have drawn attention to the shares of other electrical manufacturing companies. Amongst these the most promising, in my opinion, are *Associated Electrical Industries* £1 ordinary units, which can be bought at 26s. 9d. The report for 1934 is due early next month. While a dividend of not more than 5 per cent. can be expected, I understand that the figures will make a strong shewing. Of more importance, however, will be an indication that, compared with a year ago, orders on hand are now considerably higher. For the year 1933 earnings on the £4,898,460 ordinary capital barely covered the 3 per cent. dividend paid, but as recently as 1930, 7 per cent. was earned, and 6 per cent. paid. I expect to see the ordinary units standing at 30s. in the near future.

Gold Price and Gold Shares

One would expect to see a sharp rise in gold shares immediately the price of gold begins to go up, not necessarily as rapidly as it has done in the past fortnight, but at least to a moderate extent. The reverse, however, is often the case, at least while the rise in gold is continuing. The price of the metal has to become stabilised at a new high level before really determined buying has a hardening effect on share prices. It may take a few weeks, or only a few days, but in many instances in the past an upward market movement has not developed instantaneously.

What are the reasons for this seeming paradox? They may be many and varied, but my own observations have led me to conclude that a share boomlet is not seen immediately, firstly because the rise in the price of gold is not trusted as being permanent, secondly because speculators are taking their profits, and thirdly foreign sales of gold shares are made on currency fears. When these factors are discounted, then we see the real rise begin even though the price of gold may have fallen in the meantime.

Apart from several leaders, gold shares are not on the whole much higher than a week ago despite the pyrotechnics of the metal. In some instances, especially developing properties, prices are lower. Now is the time for the speculator to buy for the eventual rise, although I must say that the seeming speculator of to-day may turn out to be the investor of next month. As one of my market friends remarked the other day, "I am advising my investment clients to sell their speculative gilt-edged holdings in order to transfer to safer gold shares."

On previous occasions I have referred favourably to *African and European Investment* shares. So far they have not shewn any signs of fire works, but for those with patience a good reward will soon eventuate.

For the out and out speculator with plenty of courage there is scope for a rapid doubling of capital in *Van Emden* 5s. shares now standing at almost the lowest level for this year of 27s. 6d. The company owns a large area of rich gold-bearing land in Dutch Guiana, and if preliminary estimates are to be realised, the property will become fabulously valuable. Earlier this year the shares were as high as 70s.

Elsewhere I favour the shares mentioned in previous notes, to which might be added, as a definite recommendation, *Commonwealth Mining and Finance* at 12s. 9d. as a gamble.

Nnndydroog Mines is paying a final dividend of 4s. on each of the 566,000 10s. shares, making a total of 6s. 9d. for 1934, against 8s. 6d. per share for 1933. The shares are 59s., while *Champion Reef* are 40s., *Mysore* 23s. 9, and *Ooregum* 14s. 9d., all ex dividend.

One of my first selections in West Africans—*Ashanti Gold Mines*—continues to break fresh records, the total profit for February being £81,199, against £79,564 in January. Developments continue excellent. After being higher the 4s. shares are now 60s. 3d.

Tin and Other Speculations

On Thursday last the recent Pepper and Shellac speculaions were well discussed in the course of a full dress debate in Parliament. It would appear from this debate that certain powers behind the scene in the tin industry may have been directly or indirectly connected with the pepper and shellac operations. Hence, the operations of the "Tin Pool" were brought into the discussion. Although much hot air was wasted, nothing definite came of the references to this commodity, excepting that the Secretary of State for the Colonies again defended the present restriction scheme.

While the tin restriction scheme may not be working to the entire satisfaction of all parties, I fail to see what other plan could be adopted, unless, to the possible ruin of most producers, the whole plan were dropped. So far as I can see, the present agitation is not directed mainly against the restriction scheme, but against certain of the leading powers in the industry. The opportunity has been taken of turning it into a minor political issue, and, if rumour is to be relied on, much of the agitation against restriction is being fostered with the deliberate intention of helping those who have "gone short" of the metal.

Whatever the upshot of the commodity specula tion agitation, the position of the tin mining industry is unchanged, and will remain unchanged until the price of the metal has fallen to a permanently lower level. Who can be surprised that the tin share market is under a cloud? While I am not prepared to dogmatise, I do feel that recovery will set in when once the present agitations have died down.

A little encouragement was gained from some excellent dividend announcements made during the week. Of these, that of *Rawang Concessions* gives me particular pleasure, as I have previously recommended these shares. In respect of the year ending this month a further interim dividend and bonus of 7½ per cent. is being paid on the £1 shares, making total payments to date 17½ per cent. compared with only 10 per cent. for the whole of the year to 31 March, 1934. The shares have recovered to 25s. 9d.

Toyo Tin, which owns all the capital of a Japanese operating subsidiary, is making up to the dividend for the year to November 30 last to 17½ per cent., which goes against nothing in the previous year. The 2s. 6d. shares are a promising low-priced speculation at 3s. 3d.

Other payments are: *Malayan Tin Dredging*—10 per cent., making 25 per cent. to date, against 36¼ per cent. for year to 30 June 1934. *Southern Malayan Tin Dredging*—5 per cent., making 15 per cent. to date, against 20 per cent. for the full year to 30 June 1934. *Southern Perak Dredging*—2½ per cent., making 6¼ per cent. to date, compared with 10 per cent. for 1933-34. *Kramat Pulai*—20 per cent. in respect of year to 31 December 1935.

Cement Industry Prosperity

Ample evidence of the benefits which can accrue to an industry from control of selling prices and elimination of cut- throat competition is forthcoming in the sharp increases in profits of the two leading concerns in the cement industry. For the year to 31 December last *Associated Portland Cement* increased its net profits by £102,387 to £488,739, while *British Portland Cement,* which is controlled by the Associated company, made net profits of £396,106 against £357,056 in 1933. In the case of Associated the dividend on the £3,500,000 ordinary capital is raised from 7 per cent. for the previous year to 10 per cent., while British is playing 17½ per cent., compared with 15 per cent.

Although the above net figures are good, an analysis of both companies' accounts reveals that the comparable improvement was even better. As regards Associated Portland, profits are struck after charging £412,150 (£387,150) depreciation and £74,446 (£58,485) for debenture sinking funds, so that earnings for 1934 before these allocations were £975,335, or £143,348 more than for 1933.

Turning to the British Portland figures the improvement is proportionately as great, net profits being arrived at after £255,000 (£205,000) depreciation, £9,262 (£54,124) debenture sinking fund, and £58,984 (nil) written off debenture stock premiums. Comparable profits for 1934 are therefore £719,352, against £616,180 in 1933.

I can recommend the £1 ordinary shares of each company as sound lock-up investments, giving the right dash of speculative opportunity. Associated shares are 43s. and British Portland 79s., with the former enjoying a freer market.

Attock Oil Prospects

Judging by an official review of conditions, prospects for *Attock Oil Company,* which should be well-known to many of my readers, are not exceptionally bright. It is estimated that results for the year to 31 December, 1934 will shew a loss of about £25,000 to £30,000 before providing for major depreciation. Cash resources, however, remain sufficient to carry out present and prospective drilling programmes. Dealing with output and sales the report states:—

Khaur Field—Results of drilling to the shallow and intermediate sands have continued disappointing. Crude production for 1934 was 85,133 barrels, compared with 101,375 barrels. Recently a well on the eastern border of the field has been taken down to 4,916 feet, where it struck oil and is still flowing in small quantity.

Dhulian—A new well is now 3,520 ft. deep. Although water troubles encountered in previous wells have appeared, these have been dealt with successfully so far.

Chhart—A test well has been commenced and has reached a depth of 1,414 feet. A small gas show has been encountered.

Khaire Murat—A further shallow well has been completed at 995 ft. but without proving commercial production, although small oil shows were obtained.

Sales and Finance—Sales of refined products have been on a lower scale than in the previous year in line with the decreased crude oil production. Market conditions also have been very unsettled and prices obtained have been relatively lower.

The £1 shares, which last received a dividend in 1929, have risen to around 8s. and should be sold. Better speculations are offering elsewhere.

While on the subject of oil shares, I must say a word about *Mexican* and *Canadian Eagles,* dealings in the shares of which companies were suspended last Wednesday on the calling of a shareholders' meeting of the Mexican Company to receive a report on the grave position in which this concern is placed by the ruling of the Mexican Supreme Court regarding the depositing of a bond in respect of an appeal in a law suit. At the meeting an advisory committee of three shareholders was appointed to co-operate with Royal Dutch-Shell interests, while it was even advocated, in view of the seemingly preposterous claims made and apparently upheld by the Mexican Government, that the British Foreign Office should be requested to interviews.

Market Pointers

Home Railway traffics for the ninth week of the current year were again disappointing. Compared with the corresponding week of 1934, total takings of the four main lines fell by £65,000, but as in the

previous week, receipts from passenger traffics were again higher. The aggregate decrease to date is £202,000, although passenger takings are up by £174,000. My faith in recovery later in the year is undiminished. Home Rail junior stocks are a good speculation.

I have noticed some good buying of *Slazengers* £1 ordinary shares, now around 29s. The report of this well-known sports, etc., manufacturing company is due in a few weeks' time. For the previous year the dividend was 6 per cent,. but for the past twelve months I expect an increase to at least 8 per cent., with profits shewing considerable expansion.

The dividend announcement of *Imperial Chemical Industries* is expected in the near future. As this great combine must have benefitted from better trading conditions during 1934, I confidently anticipate an increase in the ordinary dividend, which was 7½ per cent. for 1933. Conservative estimates expect the distribution for 1934 to be made up to 8 per cent., but my own anticipation is at least 8½ per cent. In the general dullness of markets the £1 ordinary have declined to 36s., a price offering scope for recovery of several shillings.

I am pleased to tell my readers that profits of *Swears and Wells,* the furriers, house furnishers, general drapers, etc., for the year ended 31 January, 1935 are much higher than a year ago, the net amount being £103.723. A final ordinary dividend of 5 per cent. is proposed, making 7½ per cent. for the year, against 5 per cent. for the previous twelve months. After adding £10,000 to general reserve and £7,342 to debenture sinking fund, tht carry forward is increased by £8,381 to £44,895. The consolidation scheme carried through last April has thus been advantageous, and further improvement in profits can be expected during the current year. I look for a steady rise in the £1 ordinary shares from their present level of 25s., at which price the yield is the satisfactory one of 6 per cent.

The dividend on *Salt Union* ordinary shares is being maintained at 9 per cent., and what is more, was comfortably earned. Need I say more than that the shares yield 4-2/3 per cent. at 37s. 6d. ex dividend.

Prospects for the ordinary shares of *Hadfields,* the engineers and steelmakers, are enhanced by the announcement that the four years arrears of preference dividends are to be paid off. In the near future proposals for writing down the £1,859,784 ordinary capital will be put forward. It is expected that the £1 ordinary will be reduced to 10s. shares. As the way is now clear for resuming dividends they are, in my opinion, undervalued at anywhere around 9s.

Boots Pure Drug is maintaining the quarterly interim dividend on the 5s. ordinary shares at 6 per cent. actual. The shares are 48s. 9d.

Profits of *Cammell Laird and Company,* the shipbuilders and engineers, were £29,173 in 1934, after charging depreciation, against £31,876 in 1933. By taking £440 from undistributed profits brought in, it will be possible to pay 2½ per cent. (same) on the First and Third debentures on May 1st next. Although not up to my expectations these profits are good. In view of the brighter outlook in the shipping and engineering industries the first and third debentures should not be parted with at current prices of 80 and 79 respectively.

Swan Hunter and Richardson have jumped smartly to 16s. 9d. following resumption of dividends after a two-year lapse with a payment of 3 per cent. Net profit for the past year is up from £33,729 to £111,189. After meeting dividends £26,279 remains to be carried forward. The 1934 profits include £65,000 (£50,000 in 1933) from income tax reserve, but nothing (£50,000) is taken this time from general reserve.

I learn that extraordinary meetings of *Burma Corporaions* are to be called shortly for consideration of a reduction in the capital from Rs. 20,00,00,000 to Rs. 18,00,00,000 by a return in cash of one rupee per Rs. 10 share. This is in accordance with the forecast made at the meeting held in January last. The shares are 8s. 42d.

THE BOURSES IN AIR MAIL WEEK

Paris:

The uncertainty of the foreign exchanges was the main disturbing factor and business was very restricted on the Bourse, prices showing considerable irregularity. A better tone prevailed for some time due to a temporary improvement in sterling. But there was again a relapse owing to the postponement of the Anglo-German negotiations and the renewed weakness of sterling. The week closed however with a brighter tone prevailing in most of the sections though the rise in prices failed to bring in any fresh buying.

On the Parquet, Rentes and Bank shares declined. Banque de France was quoted low at 10,230. There was a better disposition towards the close of the week and the Rentes and Bank shares ruled steady at slightly higher levels though foreign banks displayed a certain amount of irregularity. Industrials generally strengthened and in the Foreign Bond section 5½ per cent. Young Loan recovered sharply from 383 to 395.

Among internationals, Royal Dutch Petroleum, Central Mining and Rio Tinto were quoted lower. These showed a little advancing tendency at the end of the week, Central Minings meeting with some enquiry and rising up to 1,630 f.

On the Coulisse, Diamond shares behaved better than most of the other sections of the Bourse. The irregularity and depression on the market had its effect on the Gold Mining Group and most of the shares were quoted lower despite the weakness in sterling and the advance in the London price of gold. Towards the end, however, all the issues registered higher levels.

Rubber continued to decline and oils were featureless.

Berlin:

Conditions were otherwise in Berlin and the Bourse was firm during the early part of the week and closed dull towards the week end.

Banks continued good, recording several rises. Industrials were better with Farbenindustries quoting at 141½ and Ford Motors at 53. On March 5, Westergeln Alkalis rose to 112 and Steel Trust to 73¾. Electricals were not very good, Siemens being occasionally down at 140. Schukerts and A. E. G.'s were better.

On the last day of the week, Banks were quoted lower and Industrials were dull. Rayons were down at 53. Among Minings, Harpeners were quoted low at 97¼. Shippings were easy.

WALL STREET IN AIR MAIL WEEK

GOVERNMENT BONDS IRREGULAR

INTRUSION OF POLITICAL FACTORS

BY F. ROCKE

By Air Mail

Special for "INDIAN FINANCE"

Political factors have again begun to weigh with the markets. The spectacle of one court after another dealing a blow at the N. R. A. has caused confidence to decline. Though Wall Street is none too friendly to the New Deal, it cannot welcome new elements of uncertainty in the business outlook. The decline in sterling is believed to have more or less opened up old wounds ; and there is no knowing how the Administration will meet this new factor, or whether old methods will avail at least as well as before. It is no matter for surprise, therefore that the general feeling is pressimistic. Utilities and rails were severely affected. Prices were generally on the downward trend. There was a short rally for sometime owing to the rumours regarding the further devaluation of the dollar. But when the rumour was corrected there was a set-back. Consolidated Gas was particularly weak owing to the publication of a violent attack on the company by the New York power authority alleging financial malpractices and the necessity of a capital reorganization. On the last day of the week Wall Street had little life left in it. Turnover was small. Price changes were narrow, though the tendency was generally upward, due largely to technical factors.

The Bond Market was irregular. Government Bonds were strong for some time owing to the announcement of the conversion offer of Liberty Bonds. Other foreign bonds were generally weak.

The terms of a conversion offer to holders of $1,850,000 of Fourth Liberty 4¼ per cent. Bonds were announced during the week. Holders of such bonds which mature on April 15 next are being offered 20 to 25 years Bonds bearing 2⅞ per cent. interest. The new bonds will be dated March 15 and interest will be payable half-yearly. The Bonds will mature on March 15, 1960 but may be redeemed on the option of the Treasury on or after March 15, 1955.

Rails were weak as usual. Mr. Eastman gave the warning that Government ownership would become inevitable if the railways did not co-operate and tried to better themselves. The New York City authorities have introduced legislation to authorise the unification of the city transport lines ; but opposition from the State Transit Commission might cause some delay.

The Interstate Commerce Commission Bureau has refused the Chicago and North Western Railway permission to draw $9,000,000 General Mortgage Bonds for use as collateral, on the grounds that no property basis existed for further borrowing.

A bill to modify the Railroad Bankruptcy Act has been introduced into the House of Representatives.

Fixed charges would have to be reduced to an amount "adequately covered by probable earnings", instead of 80 per cent.

Option warrants would be issued to stock holders, and also stock which would be void if earnings were not sufficient to pay a dividend.

The Denver and Rio Grande Railroad reorganization plan has been rewritten so as to reduce fixed charges to less than $2,250,000 annually.

Utilities were weak owing to the uncertainty about the Holding Company Bill. There is a hint of a change in the Utility Holding Company Bill. Mr. Roberts Healy, a member of the Securities and Exchange Commission, suggested that, instead of ordering the abolition of the holding company, the measure be modified to vest in the Securities Commission the power of determining whether individual companies should be split up or not. This is regarded as tantamount to a change in the Bill, as Mr. Healy has been closely connected with the Government in preliminary negotiations and drafting.

A decrease in crude oil production was recorded in the week ended March 2, according to the estimates of the American Petroleum institute. The daily average production was 2,473,850 barrels compared with 2,532,000 barrels daily in the previous week.

Gasoline stocks at refineries on March 2, totalled 55,654,000 barrels against 54,399,000 barrels on February 28.

Steel mill activity has been unchanged and according to the *Iron Age* steel mill activity for the week was at 48.5 per cent. of capacity compared with 48.5 per cent. the previous week. The decline has been arrested. Though it is expected that there will be a decline in the demand from automobile industry the gradual accumulation of railway and other orders are counted on to compensate the decreased demand.

The automobile industry is doing exceptionally well. Sales of automobiles to consumers are heavier than expected. Manufacturers are planning a total production of 400,000 units in March against 350,000 last month and 292,765 in January.

Ford V-8 Model, world production in February, was 135,663 cars, of which 126,646 were in the United States, and 9,017 in Canada. The March Schedule for the United States is 160,000 cars the highest since June 1930.

Arrangements are being made by manufacturers to minimise the possibility of a general strike as a result of the strike vote which was ordered by the Automobile Workers' Union. The Manufacturers anticipate isolated interruptions but scout the chances of a successful general strike.

In continuation of our comments on companies in the American Sugar Industry the Great Western Sugar Company is interesting. It owns 22 beet factories in the Western States and a molasses refinery. The capital consists of $15,000,000 7 per cent. Cumulative Preferred Stock $100 par and 1,800,000 shares of no par common stock. In the year ended February 1935 dividends were paid at the rate of 60 c. quarterly. At the present price of around 30 the yield is some 8 per cent. With the improvement in sentiment with regard to the refining industry appreciation in value may be expected.

The preliminary figures for 1934 issued by the Celanese Corporation of America disclose a substantial set back in revenues from the record levels reached in 1933. After provision for depreciation, Federal tax etc., the net revenue balance declined from $5,453,902 to $3,229,458.

Dividends on the 7 per cent. Prior Preferred Stock took $803,786 and on the 7 per cent. Participating Preferred stock $1,762,948. Of the latter sum, $725,695 represented payment of arrears in full.

The Consolidated Gas of New York is charged with having deliberately watered its capital so as to be able to distribute more in dividends without having to exceed the return of the 7 per cent. on Capital which is permitted to utility undertakings. The revision of the rates and the possibility of a capital reorganisation must result in the reduction of the company's earnings.

COMPANY REPORTS

BHULANBARAREE COAL CO., LD.

The Directors beg to submit the Audited Accounts for the half-year ended 31st December, 1934, which show a profit on Revenue Account of Rs. 34,685-0-7. After bringing forward a debit balance on Profit and Loss Account of Rs. 1,21,434-11-7 and allowing Rs. 29,671-9-8 for Depreciation, there remains a debit balance of Rs. 1,17,269-11-7 to be carried forward.

Raisings and Despatches—76,101 tons were raised and 73,601 tons were despatched.

Labour—Health of the labour has been good.

Market—There has been no appreciable change in the Coal market.

Sandstowing—was continued throughout the period under review.

J. A. Roberts, J. R. Coulthard, D. H. Wilmer—Directors.

F. W. Heilgers & Co.—*Managing Agents.*

THE TIMES
TRADE & ENGINEERING

A Complete Paper for the Business Man

THE primary purpose of TRADE AND ENGINEERING is to demonstrate the progress of British industry ; it devotes special attention to research, the development of new industries, and the changing conditions under which trade is now carried on. All this is, of course, of great importance to firms dealing with British houses.

The review is of particular interest to the reader abroad, notably for the following regular features :—

THE NEWS LETTERS

from trade correspondents in foreign countries keep the reader in touch with the development of financial and commercial conditions in other parts of the world. Full use is made of the unique services of *The Times*.

TRADE WITHIN THE BRITISH EMPIRE

is covered in dispatches from the main centres of the British Empire which are of importance to all merchants and exporters.

Much practical information concerning the

PROGRESS OF INDUSTRIES

is given by special correspondents in close touch with conditions in the principal manufacturing trades in Great Britain.

MARKET MOVEMENTS

are shown by brief reports and charts recording the average prices ruling for various commodities in the principal markets of Great Britain.

ENGINEERING AND SHIPBUILDING

contains reports of the work at the various shipyards and latest news from the "heavy trades" centres. The aircraft industry and the principal forms of transport are also dealt with.

FINANCE AND INDUSTRY

Banking Notes, Exchanges, and a summary of British Company reports form a most valuable record for reference purposes.

In addition to a number of articles upon new phases of trade and industry there is each month a special illustrated section in which the activities of particular industries or industrial areas are reviewed.

INDIAN FINANCE YEAR-BOOK, 1934

LONDON PRESS OPINIONS

The Times

Useful Reference Work

Mr. C. S. Rangaswami, Managing Editor of the Calcutta weekly, *Indian Finance* now on a visit to this country, and his colleague, Mr. P. R. Srinivas, are to be congratulated upon the thoroughness of the *Indian Finance Year-Book, 1934*, Calcutta, Rs. 5 (7s. 6d.) It is valuable for the comparative tables given in all the sections, which comprise accounts of the India Government and the Provincial Governments; currency and monetary tables; external and internal trade in the chief commodities, industries, banks, insurance, public utilities, transport, co-operation and population.

Imports of cotton piecegoods of various descriptions from different countries are shown in millions of yards, figures being given of pre-war, war and post-war averages (each covering a five-year period) and of each year from 1929-30. Similarly, there is given the composition of the paper currency reserve under ten headings for the last day of each month since March, 1914. Each main section is preceded by an instructive survey of events and conditions in 1933-34.

A useful feature of the book is the tabular statement showing the working of the Tariff Board since its establishment in 1923, comprising the subject of enquiry, the recommendations of the Board, and the action taken thereon by Government. The industrial section is full and explanatory. The Year-Book will be of value to all who wish to be well informed on Indian economics.

The Financial Times

"Indian Finance Year-Book, 1934."

A PRACTICAL GUIDE TO CURRENT PROBLEMS.

The Joint authors of *Indian Finance Year-Book, 1934*, were wise not to subordinate the quality of this invaluable compendium to the rigorous requirements of a time table. The result is a notable contribution to Indian economic literature, as well as an indispensable work of reference, for the merchant, student and politician alike.

It would be difficult to imagine a more comprehensive and up-to-date compilation of facts and inferences, which should be in the hands of all who aspire to a proper understanding of the Indian problem. The national finances, including the provincial budgets and railway accounts, banking, currency, monetary and trade—overseas and internal—statistics are all marshalled and presented, with comparative figures in many cases for the preceding ten years, in convenient and attractive form.

Separate sections are devoted to industry, banking, insurance, public utilities, transport and co-operative societies. The history and working of the Indian Tariff Board are reviewed, and a feature of the banking and insurance section is the analyses of the balance sheets of the leading British, Indian and foreign undertakings operating in India. The introductions to each chapter are well written and informative. The correctness of the facts can hardly be disputed. The authors' conclusions, if not always equally indisputable, are set out with obvious sincerity and based upon the knowledge and experience of one of the most successful and well informed Indian financial journalists.

The Policy

Indian Finance Year book, 1934 (Calcutta, Rs. 5)

The issue of this important publication so late in the year is regretted by the joint editors, P. R. Srinivas and C. S. Rangaswami. In the compilation of the book they encountered great difficulties in endeavouring to cover the entire field and were unwilling to subordinate the quality of the work to the requirements of the time table. The Year Book is an excellent survey of the National finance of India in 1933-34. It shows that India, having passed through a period of unprecedented depression has now emerged into a better era. A brief résumé of the National Finances in 1934, given at the beginning of the book, deals with the finances of each Province separately, giving a survey of the Provincial Budget, and the taxation proposals for 1935.

The Daily Herald

Financial details are regarded by many as being uninteresting. Sometimes they are. But when they are intelligently illustrated they often provide most interesting studies.

An example of the latter kind of financial record is the *Indian Finance Year-Book. 1934*, which is an annual supplement to *Indian Finance*. The editor is P. R. Srinivas, and the Year-Book is published from 20, British Indian Street, Calcutta, at the price of five rupees.

It covers the entire national economic life of India and should prove of particular interest to investors in Indian securities at the present time. It provides a layman's study of the situation, with interesting sidelights on the human side of Indian problems, but a study which should at the same time provide the expert, the banker and merchant with the information he requires.

Discussing the means by which budgetary equilibrium has been established in the various provinces the editor, while congratulating the Governments concerned, does not hesitate to point out that "such improvement as has been effected has been at the cost of high human suffering, and that in the centre the very claim of Government to having balanced the budget is open to doubt and question."

The Financial News

"Indian Finance Year-Book, 1934,"

The Indian Finance Year-Book, 1934. (Indian Finance, Calcutta, Rs. 5) copies, of which have just reached this country, is a notable contribution to Indian economic literature. It is an indispensable work of reference and a most comprehensive compilation of facts and inferences. Statistics on national finances, provincial budgets and railway accounts, banking, currency, and trade, are all presented, with comparative figures in many cases for the preceding ten years, in convenient form. Industry, banking, insurance, public utilities and transport are dealt with in separate sections.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Money conditions have continued extremely stringent during the week. Call money has been done at as high a rate as 3½ per cent. And the reasons for the continuance of stringency are far from difficult to find. The exchange market reports little or no business. The market has been dull in the absence of bills. The continuance of stringent money has precluded largely the possibility of recovery in giltedge. As we anticipated the inauguration of the Reserve Bank has meant, for the present, an accentuation of the stringency in the money market.

The results of the subscriptions to the Reserve Bank issue have been published during the week. It is learned from the results that the issue was heavily oversubscribed, though, at one stage, there was reason to think that the applications would even far exceed double the amount on offer. That Rs. 9 crores have been applied for is sufficient to show to what extent applications for Reserve Bank shares have made a demand on the available stock of funds. There is not any means at present of determining to what extent the application money has been drawn from the resources of the money market. It is possible that, so far as Calcutta is concerned, the demand has not been very heavy. Subscriptions at this centre, unlike subscriptions in Bombay, have been only Rs. 18 lakhs in excess of the total value of shares allotted to this area. It is also possible that those, who are in aposition to apply for big blocks of shares refrained from doing so in the belief that such applications had very little chance of allotment. While thus the bigger applicants had stood aside, the middle classes, who would have applied for five shares each, were not in a position to do so owing to the general impoverishment of the people that has occurred during the depressed years. It is, we believe, on this basis that the comparatively disappointing results of the Reserve Bank issue, so far as Calcutta is concerned, can be explained. On the assumption that the bulk of applications have come from those who have applied for five shares each, it is possible to suggest that the inroad into money market resources had not been very serious.

In conditions of such prolonged monetary stringency, it is, indeed, hard to expect that giltedge would recover. At the end of Friday's trading 3½ per cent. paper is quoted at the dead low level of Rs. 90-6. It must be said that during the middle of the week Paper improved to as high as Rs. 92-14. And it was even hoped in some quarters that giltedge had touched bottom and that recovery was afoot. Once there is room for such hope, it is not difficult to do the rest of the reasoning. The reports so far had, of the talks between Sir John Simon, the Briish Foreign Minister, and Herr Hitler, the German Chancellor, have been encouraging. There was reason to believe that the lightning developments of last week in international politics had been stayed and that it was not improbable that Herr Hitler and Sir John Simon might arrive at some understanding, which would prove the beginning of at least a tentative international agreement.

But such reasoning, no doubt understandable then, has been cruelly falsified since. The small gain in giltedge which was made on Wednesday was wiped out during the course of Thursday and on Friday giltedge sank heavily, while on Thursday 3½ per cent. Paper opened at Rs. 92-8 and closed at Rs. 91-15, on Friday 3½ per cent. paper sank even lower to Rs. 90-6. The main cause of this fall is given out as the report of the troubles of the Belgian currency. Reports were received on Friday morning that the devaluation of the belga was imminent, that the Cabinet had drafted a declaration of its policy and that an official order had been published closing the Belgian Bourses on Thursday, Friday and Saturday. Consequently there will be no quotations on the foreign exchanges during these days. Our own experience of three days' holiday in September 1931 should make clear the purpose of the Belgian

declaration. According to *Reuter*, estimates in Brussels as to the rate of devaluation vary between 15 and 40 per cent. ; but it would appear at the same time that the adherents of the present parity do not mean to yield to the advocates of depreciation.

It is, indeed, difficult to see how the prospect of devaluation in a country like Belgium need affect the prospects of giltedge in India. The first thought that would rise in one's mind on hearing the news from Belgium is that the position of the gold standard countries was becoming increasingly difficult and that those currencies might before long have to be devaluated. What is the significance of such devaluation to the Indian giltedge market? In so far as it reduces the uncertainty of international finance and brings international stabilisation nearer, it will make for stability of giltedge prices. If the value of a currency has a relation to giltedge prices through its effects on credit policy, then every act of devaluation must render easier the pursuit of a policy of the cheap money. But in the present state of the giltedge market every sensational development seems to have a highly bearish significance. When one is in a state of fear, every piece of rope or rag seems a hooded serpent.

But the authorities can ill afford to succumb to defeatism. It is a matter for the Reserve Bank to ponder over that during the three months between the formal constitution of its Board and formal inauguration of the Bank, giltedge has dropped by nearly 10 points. We do not believe that it can be seriously contested that the state of the Government credit is one of the principal responsibilities of a central banking institution. Not directly perhaps. But the state of giltedge is so closely connected with the state of the money market and the provision of credit for trade and industry that one might well say that giltedge is a direct charge of the central banking institution. We have repeatedly urged the imperative need for the Reserve Bank beginning its regime with a significant departure from the traditional credit policy of the Government of India. An expansion of currency at this juncture can be justified on every imaginable count.

Apart from the wider consideration of the needs of the national economy, the Reserve Bank might regard the question as one of withdrawing from the market the surplus scrips of giltedge which were unloaded during the year end. We have not the least doubt that, if these surplus scrips had been withdrawn earlier in the year, Indian giltedge would have more than stood up to the succession of adverse events in world politics and finance. In the middle of December last, it should be remembered there was little doubt entertained in financial circles that Indian giltedge had freed itself from the apron strings of the London market. The pity is that nothing had been done to consolidate and strengthen that position of independence. By taking advantage of the level of prices in December to unload scrips on the market, the banks have brought about a position in which the market is extremly susceptible to every adverse development. The sale of scrips has also created extreme stringency in the money market. The Reserve Bank owes it to itself and the market to undertake open market operations, ease money conditions and strengthen giltedge. If the bank discharges its obvious duty in this regard, it will have begun its career in a significantly re-assuring fashion and public confidences in the bank will be increased.

The exchange market continues in a state of dullness.There are no bills offering. Banks are sellers of T.T. at 1s. 6 3/32d. For most part of the week there were buyers about the level of 1s. 6⅛d. There is no credit business being done.

The closing rates are: 1s. 6 3/32d. March T.T; 1s. 6 1/16d. April T.T.; 1s. 6 1/32d. May-June T.T.; and 1s. 6d. July-December T.T.

Bills are quoted: 1s. 6 3/32d. April 15; 1s. 1/16d. May 15; 1s. 6 1/32d. end of June;

Money was in good demand with the quotable call rate at 3¼ per cent. One month two months and three months deposite may be quoted at 2, 2½ and 2½ per cent. respectively.

Thursday.

The steadiness of sterling during the week shows that the forces set in motion by the slump of three weeks ago are nearly spent up and that the position is now largely similar to this time last month. There has been a slight appreciation of sterling during the period under review. The sterling dollar rate has gone up from 4.76 1/8 to 4.79 3/8. The sterling franc rate has also risen from 72.15 to 72.59. It may be said that the recovery of sterling from the depths of very near 70 frances was complete by the end of last week. The moderate increase that has occurred during this week must be attributed to the nervousness that still persists in regard to the gold currencies.

How long this rise will continue is the most important question at the moment. An answer can be found only by an examination of the causes which have brought about the recovery of sterling. There can be no doubt that, if sterling has risen during the last fortnight, it was not because of the intrinsic strength but because other currencies have been even weaker during this period. The whole structure of the Gold Bloc has been rocked to its foundations by the headlong depreciation of sterling. France was calculating the effects of devaluation on her financial position. Belgium saw the belga sink to a serious discount at least in regard to the forward position. Holland nearly made up its mind that Belgium shall not be alone in her abandonment of the gold standard. Spain was, and even now is, keenly watching the developments in other countries. Italy has carried out virtually a moderate depreciation of the lira. The sensation in international finance was scarcely less serious than the sensation in international politics.

In these circumstances, it is no wonder that foreigners who withdrew their funds found that they had deserted what they thought to be a sinking ship for the back of a whale, as in the story of Sinbad the sailor.

It is this feeling of the instability of the gold currencies that is responsible for the recovery of sterling. Reports in the Air Mail papers make it clear that the covering which initiated the recovery of sterling was fairly complete by the end of Air Mail week. This means, as we have hinted earlier, that the position at the beginning of the week under review is in many respects similar to the position at the time the decline in sterling began.

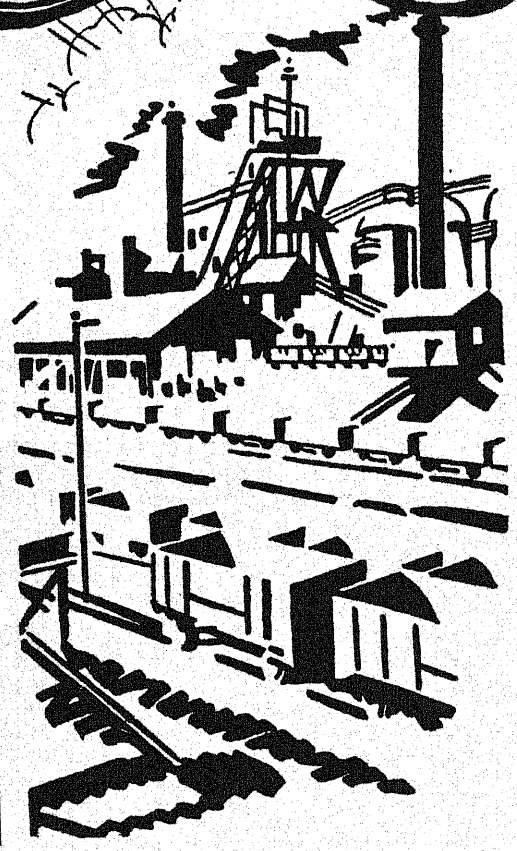
It will be useful to examine the points of similarity and contrast. To take up the former first, the most important point in this regard is the feeling of political instability. Though at that time the political fears were exaggerated, there is no reason to suppose that they have ceased to exist. The unsettlement caused by the announcement of Mr. Lloyd George's New Deal still continues in a large measure. The Cabinet has neither made up the differences in its own ranks, nor has it come to an understanding with Mr. Lloyd George. It looks as though the British Government will not be able to escape the necessity of some liberal monetary policy and a policy of public works expenditure. Nor has the "danger" of a Labour Government disappeared. To the extent that these fears still continue, there is no material change on the situation of the pre-slump period.

Another vulnerable point in sterling at that time was the presence of foreign funds. It is not known how far the repatriated foreign funds have returned to their customary refuge. If, in the unsettled period of the last one month, all the funds have come back to London, the position must be viewed with more nervousness. It is a question whether, when a slump in sterling occurrs again, the holders of foreign funds would be prepared to regard the gold currencies as safer, as they now know that the gold currencies are, if anything, more insecure than even sterling. To the extent that foreigners will bear in mind the recent experiences, it may be said that the next decline in sterling may not be as steep and sharp as before. But that in a general view the presence of foreign funds in London is a bear point for sterling, it cannot be denied.

As regards the points of contrast, there is the significant declaration of the chancellor of the Exchequer during Air Mail week. The Government are not prepared to give the least shred of hope that they would consider for some considerable time to come the question of stabilisation. This statement is a closely reasoned one and has been made in the face of a very covert agitation in favour of stabilisation. Economists and businessmen have of late inclined to the view that the recovery, which we have been witnessing for the last two years, has at last been arrested and that there is every reason to apprehend a setback in the coming months. It is not quite relevant to our present purpose to examine the reasons which have led them to this position. It is sufficient that the obstacles to international trade have increased during this period of so-called recovery, that recovery has been more or less wholly internal and that in every internal economy new mal-adjustments have cropped up, in the same way as new obstacles have arisen in foreign trade. There is, therefore, no need to question the view that the chances of the recovery continuing, not to speak of its gathering momentum, are very slender, indeed. If then the recovery has been arrested, it becomes necessary to see how it can be helped forward. Stabilisation of exchanges seems to offer better chances of international agreement than the removal of tariffs and other trade barriers; and there has been a significant movement to work up public opinion in important countries in favour of stabilisation.

Mr. Neville Chamberlain has refused to give in to this agitation or any of its demands. It would appear that some of the advocates of stabilisation have suggested that British might stabilise sterling in relation to the dollar instead of gold. This, they suggest, offers a *via media* between unstable exchange and a rigid link to gold. Inasmuch as the American authorities have reserved the right to vary the gold value of the dollar, the British Government will have what it wants, the opportunity of revaluing sterling when conditions necessitate such a course. Mr. Neville Chamberlain has refused to walk into the trap so lluringly laid for him.

The significant alteration on the position of the pre-slump period is that the British Government have issued a definite and authoritative statement of their unwillingness to stabilise sterling. It must also be recognised that there is a keener appreciation of the present intriguing position of the principal exchanges. At the level of over 72 francs, sterling is clearly set for a renewed decline. Any considerable decline from that level causes serious apprehensions about the gold currencies and sterling is pushed up again to the old level. Sterling can neither remain at that level nor can it decline to much below it. The gold currencies, too, are similarly placed. When sterling is weak, there is the fear that they would be forced off the gold standard. When sterling is high, there is the consciousness that it must decline. The necessity of equilibrium and the impossibility of attaining it without all-round stabilisation at economic levels is the bane of international finance.



CHEMICALS
FOR WATER-
PURIFICATION

ALUM AND
FERRO-ALUM

Best for quick settling and purification of water. Extensively used by Municipalities throughout India.

PUBLICATIONS OF THE LEAGUE OF NATIONS

"BALANCES OF PAYMENTS, 1933"

Price: Rs. 4-2-0

Only existing statistical book of reference concerning international accounts (trade in goods and services, gold, long and short-term capital operations). Figures, are given for 32 countries, in the majority of cases for a series of years up to 1933 inclusive. Information is also supplied concerning outstanding international liabilities and assets. In a summary chapter the general tendencies up to September, 1934, are dealt with, special consideration being given to the effect of currency depreciation.

"ARMAMENTS' YEAR-BOOK, 1934"

Price: Rs. 13-12-0

This edition contains monographs on 64 countries, both members and non-members of the League, The information contained is derived from two sources: the communications from various Governments to the Secretariat on the occasion of the Conference for the Reduction and Limitation of Armaments and the official publications of the different countries, such as collections of laws, army gazettes, etc,

"NATIONAL PUBLIC WORKS"

Price: Rs. 8-4-0

This book has just been issued by the Communications and Transit Organisation of the League of Nation and is the result of a letter addressed by the Secretary General of the League requesting various Governments to communicate to him the following particulars: (1) A brief description of the main public works undertaken since the beginning of the year 1929; (2) The principal administrative methods followed or contemplated for the execution of such work; (3) The principal methods employed for financing such work; (4) An estimate, as far as possible, of the allocation of expenditnre on the execution of the possible works.

"INTERNATIONAL TRADE STATISTICS, 1933"

Price: Rs. 6-14-0

This volume analyses the foreign trade during the years 1931, 1932 and 1933 of 65 countries accounting for 95% of the total world trade, It contains more than 300 tables, which are accompanied by explanatory notes. The data it gives illustrate strikingly the great changes undergone in recent years in the composition and direction of foreign trade, and their effect in the position of the individual countries. The synoptical tables show the percentage distribution of each country's imports and exports by provenance and destination.

Complete Catalogue sent free on application.

SECRETARY OF STATE VERSUS VICEROY

The *zuberdusti* of the Secretary of State for India has ever been a bye-word. It may be due to the easy mastery of the virility and versatality of a Montagu over the inferiority complex of a Lord Chelmsford. Or it may be the mere pig-headedness and "cussed" obstinacy of a Lord Birkenhead. Or it may be the iron hand within the velvet glove of a Sir Samuel Hoare. Or it may even be the vague, but firm, purposiveness of a Wedgewood Benn proving more than a match for the vaguer and more incoherent idealism of a Lord Irwin. The result has always been that the Viceroy, thrice-puissant in our eyes, is, behind the scenes, bullied and bamboozled by the India Office. It is still a mystery and wonder to us that history has rarely recorded instances of Viceroys who, in sheer exasperation, hit back with vigour and chucked up their jobs in disgust. It is even more amazing that not one Indian member of the Viceroy's Cabinet has felt the goading of self-respect so poignantly as to end the whole humiliating business by resignation. Such correspondence as has been published (for instance, the vigorous exchange of views between India and London in 1924 over the fixation of the upper point of the rupee at 1s. 6 3/16d.) does show that the Government in India can take a firm stand, argue steadily and fight doggedly. But it also shows that the Grand Moghul's *hookum* is inexorable. He sticks to his views to the last; he brushes aside all appeals and threats; what he has said, he has said; and what he has said must be.

* * *

It is not the Secretary of State that has to face an angry Opposition in the Assembly or to assuage indignant public opinion in the country. He provokes the ire of all and sundry; and he leaves it to the Viceroy and his colleagues to deal with the situation he creates. He raises the wind; and the Viceroy is asked to ride the whirl-wind. He causes numberless embarrassments; and the Viceroy and Company must wangle their way out of them as best as they may. He opens up the raw wounds; and they must find the balm. He provokes war; but they must go into the fighting line and face the fire. He is secure in his pedestal seven thousand miles off; they are assailed and bombarded as the men on the spot. He is off-hand; they have to be suave. He is categorical and final; they have to plead justification, to concoct arguments and to improvise reasons. This is, in all conscience, a most improper distribution of responsibility. A measure of sympathy is due to the valiant bond in the Viceroy's Cabinet who have stood all this taunt and nagging, and who have cheerfully and uncomplainingly fought the other man's battle all these decades. Sheer sportsmanship demands that the Secretary of State should be more thoughtful of the predicament of colleagues who have every time to rush to the fray on his account. That there has been a lack of such considerateness becomes known only on occasions; but it seems a more or less chronic state of affairs. "Trust the men on the spot" would appear to be a formality rather than a reality.

Take, for instance, the 1924 exchange episode to which we have already referred. It started with a cable dated October 8, 1924, from the Viceroy to the Secretary of State. "We are convinced", says the cable (which is obviously, Sir Basil Blackett's drafting) "that the time has come when we should definitely decide against any attempt to push the rupee above 1s. 6d." It pointed out that "it is now beginning to be realised generally that the stringency in the market is the direct outcome of Government action in contracting currency, or in placing strict limits on possibilities of expansion," and that "there is serious risk of a financial crisis if we keep the screw on too tight". Here are three notable admissions: (1) It was the Government that were keeping the screw on; (2) contraction of currency was deliberately effected to accentuate stringency; and (3) it was the Government that pushed the rupee to 1s. 6d. Left to themselves the Viceroy and his Cabinet would have relaxed the screw and would have halted, at any rate, at 1s. 6d. The Secretary of State would not accede to the proposal of the Viceroy. The cable of October 8, 1924, was followed by an exchange of no less than five telegrams ending with one dated November 19, 1924, in which the Secretary of State slams the door by the curt declaration that he must adhere to the decision already communicated.

* * *

Or, take the case of the *ukase* asking Sir Basil Blackett to withdraw the Reserve Bank Bill in the Autumn of 1927 for the reason that Sir Basil had acceeded to the State Bank plan. The Finance Member had first to eat the humble pie in the full gaze of the Assembly members. He had, later, to eat up all his earlier words. Sir Basil, one of the ablest Finance Members India has had, retired in extreme unpopularity—not because of his own sins but because he had to sponsor the sins of his master in Whitehall. Lord Irwin was placed in an equally sorry plight by the truculence of Lord Birkenhead. The Viceroy begged and pleaded earnestly and vigorously for the inclusion of a few Indians in the Statutory Reform Commission. An All-White Commission was the decree of the Secretary of State; and that decree must stand. He would not be coaxed or coerced by Lord Irwin. It was Lord Birkenhead that opened the Pandora's box from which have spread all the ills which successive Secretaries of State and Viceroys are still tackling.

* * *

Nor was Sir Samuel Hoare any more considerate to Sir George Schuster when sterling was cut adrift from gold on September 21, 1931. Sir George got no official report of this from the India Office. Singing gaily and looking forward to his breakfast, whose appetising fragrance was wafted up to him, Sir George was sauntering down the staircase, unsuspectingly reading Reuter's News Bulletins (which are supplied to prominent officials). He was no longer careless; what was the shock that the bulletin gave him! England was off gold standard! What was he to do? What steps should India take in that situation? He had a bare quarter hour to think over things. Meantime, a car was rung for from Vice-

roy's House. Mr. Denning, who was in Cecil Hotel, was hastily summoned. They put their heads together; and, together, they got into the car, rushed to the Viceroy's residence and made him sign an Ordinance suspending the Currency Act of 1927. The same evening, without any consultation with the Indian Government, without even any warning to India, Sir Samuel Hoare made an announcement in London in the Federal Sub-Committee of the Second Round Table Conference; and this announcement ran exactly counter to the steps Sir George had taken in the morning. It was all chaos and confusion. This was on Monday. The only course left open to the Indian authorities was to declare that all banks should remain closed for the following three days. Meantime, frantic cables were exchanged between India and London. And the result of it all was that the Viceroy had to issue on Thursday an Ordinance cancelling Monday's ordinance. Can humiliation go further?

* * *

Then, again, Sir George fought for the cut in salaries. No, said the Secretary of State. In the end, the latter agreed to a uniform cut of 10 per cent. Sir George pleaded for a graded cut; and, we understand, he even threatened resignation. Nothing could move the India Office. The India Office was adamant. The hands of the Indian authorities have been, likewise, forced in the matter of the restoration of cuts. Had they been given the discretion, neither Sir George Schuster nor Sir James Grigg would have been in any desperate hurry to restore the cuts. What sorry figures in the Assembly did they cut when they had to justify the cutting-off of the cut?

* * *

This brings us to the latest episode, which was the subject matter of an adjournment motion by Mr. Mathradas Vissanji. The financial adjustments as between India and Burma furnished the topic for the censure motion. The position in this regard may be summed up thus:

1. The repoprt of the Round Table Conference had promised that these adjustments will be referred to an "impartial tribunal".
2. Sir George Schuster had given a promise that members of the Standing Finance Committee of the Assembly would be associated in the enquiry.
3. Sir B. N. Mitra, on behalf of the Indian Government, had pressed that the matter must be referred to the standing tribunal of the Imperial Conference or to a Committe of the Privy Council.
4. On February 21, Sir James Grigg stated that the Secretary of State had not carried out the promise of Sir George Schuster as the enquiry would be "prolonged" and members of the Assembly would not be able to spare the time for it.
5. On March 25, Sir James made another statement that the Tribunal (consisting of Mr. Amery, Sir Sydney Rowlatt and another) would be submitting their report early in April.

A tribunal, which was to contain an element of Indian *personnel,* turns out to be an all-White affair; and deliberations, which on February 21 were expected to be prolonged, are now to end abruptly in a week's time. Even the *Statesman* is spurred to sarcasm by these unedifying episodes; and it declares: "In the meantime, the Government of India have been placed in a difficult position and the process of manufacturing Swarajists unnecessarily goes apace". We congratulate Mr. Mathradas Vissanji on the thumping majority which he secured for his motion and on the support which he has received from unexpected quarters. But what does the India Office care? It is the barking of the dog at the Sun.

DEVELOPMENT OF SUBSIDIARY INDUSTRIES

In the treatment accorded by the Government of India to the recommendations of the Tariff Board in regard to the industries manufacturing carbon brushes and healds and reeds, important questions of fiscal and general economic policy are involved. Though the question at issue relates to two small, infant industries, the principle involved is of greater importance and wider application. Even so early as 1928, the year in which *Indian Finance* saw the light of day, we put forward, in the course of a special article the plea that the expansion of productive activity in this country should be sought not only on the lines of developing the key and staple industries but also the manufacture and provision of stores for such industries within the country. We drew attention to the fact that even well established industries like cotton and jute textiles have, for various reasons, been finding their supply of stores from foreign sources and that the resources of this country are quite adequate for replacing such foreign supplies with indigenous products. The managements of industrial companies in India have, for reasons of their own, made comparatively little effort to stimulate the industrial sources of supply. And we urged that, where private individuals and companies lack the incentive, it is the duty of the State to supply the stimulus. The plea put forward by the industries manufacturing carbon brushes and healds and realds

* * *

The patronage of indigenous industries is of late regarded as a solemn obligation on the part of every national. There is hardly any country in the world which does not carry on under official auspices a campaign for the encouragement of Swadeshi goods. Though India was the first to initiate such a campaign for the obvious reason that she lacked the means to enforce such a national economic policy through the excercise of legislative power, we have, under the pressure of cut-throat competition and depressed trade, the counterpart of India's Swadeshi all over the world. The sacrifices which the individual consumer would be called upon to make by adherence to Swadeshi would by no means be inconsiderable. Though on that ground there is no lack of support for the movement for buying national goods in preference to foreign goods, none will deny that the individual has comparatively little scope in the domestic budget within which to make the adjustments necessitated by the higher prices of the goods produced at home. It is different with large-scale industry. In most cases, the supply of stores from within the country would involve very little addition to costs. And even such additions as there may be are capable of adjustment with a view to prevent an increase in the cost of the final product. With such facilities, which are denied to individual consumers, one would expect the companies to develop of their own accord the industries manufacturing stores of all kinds. But in the absence of such voluntary effort State action becomes necessary. And the State cannot, except in a National Socialist regime, exercise direct compulsion on the industries in regard to the purchase of their supplies. State action has to take the form of changes in prices of the indigenous and foreign products such as would make it more profitable for the industries concerned to buy the indigenous product.

* * *

The question of the nature and extent of such changes in regard to carbon brushes and healds and reeds was referred to by the Tariff Board nearly a year ago, and now the recommendations of the Board and the decision of the Government thereon have been published. While the Tariff Board recommended the grant to both industries of the assistance which they sought, the Government have accepted the recommendations only as regards carbon brushes and rejected the recommendations made in the case of healds and reeds. It may be admitted that the case of the carbon brushes is simpler inasmuch as it raises only the question of the import duty on carbon blocks which form the raw material for the manufacture of carbon brushes. It is clearly an anamoly that, while carbon blocks are subject at present to a duty of 25 per cent. *ad valorem,* carbon brushes are charged only at the rate of 10 per cent. on the ground that they are component parts of machinery. The importance of carbon brushes to Indian economy can hardly be under-rated. It is well known that carbon brushes are required for the electrical motors and dynamos; and the consumption of these goods is heavy as carbon brushes have to be frequently renewed. There is no mistaking the immense possibilities of growth in India's electrical industry. And it would be a grievous waste of wealth, if one of the prime requisites of the electrical industry is to continue to be supplied from foreign sources. The carbon brush industry is not so placed that it need apply for protection as such. The manufacturers would be content if the scales are not weighted against them by the tariff inequality referred to above. And they have only demanded that the duty on carbon blocks should be reduced to the same level as the duty on carbon brushes. The Tariff Board have not gone to the length of recommending that the duty

on carbon blocks should be reduced to ten per cent. They argue "Assuming that a block of carbon costs Rs. 16 c.i.f., it pays a duty of Rs. 4. Five brushes, say, can be got from the block. If the c.i.f. price of the type of brush is Rs. 6, then the duty on the five brushes (c.i.f. price Rs. 30) at present is Rs. 3. In order to give tariff equality the duty on the carbon block should not exceed Rs. 3, *viz.*, 19 per cent." The Board have actually recommended an even lower rate of 15 per cent., and the difference of four per cent. is intended to make up for other handicaps which, the Tariff Board find, the manufacturers of carbon brushes have to labour under. We learn from the Board that the Indian manufacturer of carbon brushes uses two other imported raw materials, namely, flexible lead and a certain kind of patent cement on which he pays a duty. And the Tariff Board take the view that a reduction on the duty of these goods is due to the manufacturer and provide for such relief by reducing the import duty on carbon blocks to the level of 15 per cent. as against 19 per cent. which they deem to be otherwise adequate. The Government of India, in the resolution on the report, agree with the Tariff Board's finding that tariff inequality exists in respect of carbon blocks and accept the recommendation of the Board that the duty on carbon blocks, which are ordinarily used in the manufacture of carbon brushes for electrical motors and generators should be reduced from 25 per cent. *ad valorem*. The Government do not consider it necessary to undertake legislation specially for this purpose and propose, therefore, to effect a reduction of duty by notification under Section 23 of the Sea Customs Act. We are also assured that before issuing such notification the Government will give the Indian Legislature an opportunity to discuss the subject.

* * *

The disagreement between the Government of India and the Tariff Board occurs only on the question of the relief to the manufacture of healds and reeds. It may be well to re-state here the case of the indigenous manufacturers of healds and reeds. Imports of healds and reeds are subject to a customs duty of 10 per cent. For the manufacture of these articles, the local industry has to import certain finished materials, such as, reed ribs, reed staples, polished brass wire and special varnish. On the imports of these materials, a duty of 25 per cent. is payable. The manufacturers asked for an increase in the duty on healds and reeds from 10 per cent. to 25 per cent. The first question which would occur to the mind of the average man is whether such an increase in the duty would not constitute a handicap to the cotton mills in India. This question was answered in the original representation of the industry, in which it was pointed out that the incidence of this extra cost works out to 0.01665 pie per yard of cotton cloth. It should be clear from this, even if a wide margin of error were allowed for in these calculations, that, so far as the public and the cotton mills are concerned, the additional duty asked for by the Indian industry constitutes no burden on the direct or indirect consumer of healds and reeds.

* * *

The Government of India, for reasons not difficult to divine, have regarded the issue as a highly technical one. The manufacturers of healds and reeds, even like the manufacturers of carbon brushes, have not applied for protection so much as a redress of tariff inequality. They have based their claim on the existence of the anamoly that, while the finished product is subject to an import duty of 10 per cent. the raw material for such products is taxed at 25 per cent. The reason for the lower rates of duty on healds and reeds is that they are required for the cotton mills; and when it is shown that the cotton mills are not handicapped by a higher rate of duty, the onus in the case is shifted to the other side.

But even regarding the question as one of mere tariff inequality, the Tariff Board have found that such inequality exists and that the duty on healds should be raised from 10 per cent. to 15 per cent. *ad valorem*. The Government of India have declined to accept this recommendation or the recommendation in regard to reeds. The Government point out that the calculations of the Tariff Board are based on the assumption that imported yarn is used for the manufacture of healds, but that it appears from the evidence let in by two of the applicant companies, that suitable yarn can be supplied by Indian mills though it is manufactured from imported cotton. The Government, therefore, proceed to argue that the incidence of duty charged is considerably lower than that of imported yarn. From this, they conclude that what the manufacturers of healds and reeds aim at is not a redress of mere tariff inequality, but the grant of substantive protection. It need hardly be added that substantive protection was neither claimed by the industry nor referred to the Board for enquiry. The Government of India would, therefore, be justified in saying that substantive protection cannot be granted to any industry except after a formal enquiry by the Tariff Board.

But it is difficult to see how the Government arrived at the conclusion that the use of imported yarn for the manufacture of healds can make up for the higher cost of the other raw materials. The Tariff Board have pointed out clearly that, as there are a number of materials used in the manufacture of this article, it would be necessary to increase the import duty on the finished product. We are not prepared to grant that the Government are in a better position to trace the incidence of these duties than the Tariff Board. While the Government are entitled to come to their own conclusions on broad questions of policy, they cannot with reason decline to accept the recommendations of the Board in more complicated matters of detail. It is significant that, while the Government of India are only too ready to accept the recommendations of the Board, when they are against the interest of Indian industries, they are always anxious to find fault with the Board when their recommendations are in their favour.

* * *

This simple and undeniable fact should suffice to create in the public a keen and lively interest in the settlement of this question. The Government of India have, as we have pointed out already, afforded the assurance that before final action is taken in the matter, the Indian Legislature will be given the opportunity of discussing this question. We cannot impress too strongly on the Legislature its duty of reversing the decision of the Government of India and ensuring the adoption of the Tariff Board's recommendations. The popular party is, in the first place, strengthened by a finding of the Board that tariff inequality does exist in this case and ought to be redressed. We do not believe that, if there is a majority of the Assembly in favour of the recommendations of the Board, the Government will have the temerity to flout public opinion. And there is every reason why the Assembly should take a firm stand in this matter. In the first place, the encouragement of the manufacture of healds and reeds is only part of a wider policy of development of subsidiary industries. There has been as yet little attempt to determine the extent to which the country is now impoverished by getting stores for the staple industries from foreign sources. But that it is considerable, there can be no doubt. And while the national economy is being increasingly weakened not only by the aftermath of the depression, but also by the tendency of imports to grow out of all proportion to the recovery in exports, it would be folly to neglect any opportunity of expanding internal production. There is another reason why the Assembly should not give in to the dictates of the Government in this matter. It has become clear as daylight during the short period that has elapsed since Sir James Grigg took up the office of the Finance Member, that the Government of India are set on a reversal of the policy of fiscal protection which India has followed these years. While formerly the denial of the claims of Indian industry had been on narrowly technical grounds, Sir James has come forward as an avowed champion of free trade, combined, strangely enough, with a contemptuous disregard for the teachings of economists. If the Assembly omits to register a decisive verdict on the question coming up before them, they will be offering a dangerous encouragement to the enemies of India's industrialisation. On every conceivable ground the reversal of the Government's decision on the question of the import duty on healds and reeds is clearly called for, and we trust that the Assembly will prove its devotion to the country's cause.

THE CONCRETE ASSOCIATION OF INDIA

Head Office: HOME STREET, - BOMBAY

District Office: 12, MISSION ROW, CALCUTTA

COAL'S PROBLEMS

Two of the Associations representing the coal industry in Bengal have had their annual meetings. And the speeches of the Chairmen therein enable not only a review of the experiences of the year that is over, but also an assessment of the present position of the coal industry and trade. The tone of the annual address of Mr. R. B. Whitehead as Chairman of the Indian Mining Association and Rai A. C. Banerjee Bahadur as Chairman of the Indian Mining Federation clearly suggests a lack of solidarity in the ranks of the industry which is regrettable from every point of view. It is comforting, however, that this difference is slowly being bridged. It was only last year that the coal industry in Bengal was able to make a united demand to the Government for legislative sanction to a scheme of restriction, which the members of the industry had formulated for themselves. And it is unfortunate that, far from helping the growing solidarity of the coal companies, the Government actually encouraged dissensions, by suggesting that the salvation of Indian coal lies not in the restriction of output enabling all units to drag a weary existence, but in allowing the more efficient units to drive the less efficient out of the trade. Our views on this attitude of the Government are too well-known to be reiterated in this context. Here it is more pertinent to point out that the suggestion of a desperate struggle for existence among coal companies has given rise to the apprehension that the fusion of the bigger and small companies will be more or less permanently frustrated. There is also an implicit stigma of inefficiency against the smaller companies which has called forth a spirited protest from Rai A. C. Banerjee Bahadur. The Chairman of the Indian Mining Federation is confident that, if there is an impartial enquiry into the working of the coal companies, it would be found that no charge of inefficiency can be properly laid at the door of the smaller companies. But this question apart, it is encouraging to find Mr. R. B. Whitehead holding forth the assurance that the Indian Mining Association is by no means neglectful of the interests of the smaller companies. Mr. Whitehead for his part would like to see the whole of the coal interests of the country represented by one Association as it is in England. This is a consummation devoutly to be wished, not only because it will tend to create better relations between the smaller and the bigger collieries and between European and Indian, but also because it will facilitate the rational re-organisation of the industry and the solution of the most important problem to-day, namely, the conservation of the coal resources of the country.

* * *

Before this larger task can be attempted, the industry has to be enabled to recover from the depression into which it fell even earlier than Indian or world trade and economy as a whole. By their reply of January last to the representation of the coal industry, the Government have closed the door, once and for all, on the scheme of restriction of output formulated by the industry. The main reason for the rejection of the scheme is that the Government held, and even now hold, the view that restriction should be achieved not by a curtailment of output by each unit, but by the weaker units going out of the business. This shows a pathetic faith in the operation of economic laws for which there is less and less warrant in the facts of day-to-day business life. No one in the trade will doubt that, before the so-called inefficient units yield up their last breath, they will have thoroughly disorgainsed the trade and weakened the most efficient sections of the industry. It may, therefore, be said that there is no chance of improvment either through voluntary restriction or through survival of the fittest. One has, therefore, to look for what may be termed an automatic improvement of conditions in the trade. Though there is, indeed, much of leeway still to be made, it is heartening to learn that the position to-day in the coal industry is distinctly better as compared with a year or a year and a half ago. Mr. Whitehead points out that the price of slack coal is Re. 1 to Rs. 2 per ton higher than eighteen months ago and As. 8 to As. 12 per ton higher than twelve months ago. During the year 1934," he continued, "the raisings of coal in British India were about 20,100,000 tons as compared with 18,160,000 tons in 1933, and at the end of 1934 the stocks of steam coal held by members of this Association were the same as at the beginning of 1933, while stocks of small coals had decreased by over 200,000 tons. The position of the trade generally at the end of 1934 was therefore healthier but, in spite of the extra demand, there has been no increase in the price obtainable for steam coal, rather the reverse."

* * *

This improvement, according to Mr. Whitehead, has enabled the coal industry to receive the adverse decision of the Government with greater equanimity than would have been otherwise possible. One misses this note of cheer and optimism in the speech of the Chairman of the Indian Mining Federation, and it may be explained by the fact that the interests represented in the Mining Federation have not fared during the year as well as the interests represented in the Mining Association. It is clear, nevertheless, that the position is visibly better and that, given a more careful and wiser policy on the part of the industry and the Government alike, it would be possible for the coal industry to leave behind the troubles of recent times.

* * *

One of the conditions of such progress, namely, a greater fusion of the interests, we have already mentioned. There are also other problems like the equalisation of freight advantage for Bengal coal and that of the C. P. The recent reduction in the surcharge on coal freights from 15 to 12½ per cent. subject to a maximum of Re. 1 per ton irrespective of distance can by no means be regarded as justice to the coal trade. The Chairman of the Indian Mining Federation has referred to the question of freights at

great length; but three is little sign that the needs of the industry in this regard will be met by the authorities.

* * *

In the long view, the more important questions are those connected with the Indian Coal Grading Board and the steps necessary for the conservation of India's coal resources. Founded for the purpose of securing the quality necessary for the export markets, the Coal Grading Board has, indeed, functioned well. It has raised the quality of the export product. But the hope that an improvement in quality would secure an expansion in the volume of our exports, has been altogether belied. By all tokens, Indian coal has lost the markets abroad. And to recall the blunder of the embargo on exports laid at the time of the War would be to indulge in a vain regret. If one puts out of mind the question of exports, there is still a great deal of reconstruction to do about the Coal Grading Board with a view to widening its functions and increasing its usefulness—a point on which the Chairmen of the two bodies seem to be agreed.

* * *

As regards the conservation of India's coal resources, it is not generally well-known that the most serious risks of continuing the present conditions is that India might very soon use up uneconomically her resources of coking coal. The depletion of our resources of coking coal would mean that the country would in the future be hard put to it to exploit its iron ore deposits. The Coalfields Committee recommended that the consumers including even the Railways should be induced to use other grades of fuel so as to conserve the best class of coking coal for the production of coke suitable for blast furnace work. The Coalfields Committee also stated that "India will be dependent for her supplies of metallurgical coke on the group of fields lying in the Damodar valley and including Ranigunge and Jharia; and, although the total amount of coal they contain is undoubtedly very large, the quantity available for coke manufacture is strictly limited. We are not justified at present in placing this at more than two thousand million tons, and when it is realised that the Indian iron and steel industry may depend on these reserves for its future existence, the necessity for their conservation becomes evident". But lately it has been estimated that while the iron ore deposits will meet the country's needs for over 200 years, the life of coking coal deposits is not over 50 years. Such a position clearly calls for the most careful regulation of the coal industry, both on its production and on its consumption side by no less an authority than the State. It is no use to repeat the nostrums of free competition in this context. The Government must sooner or later wake up to the importance of putting the coal industry on a definite basis; and when that is done, it would be bare justice to assure each unit in the industry a fair measure of profits.

INDIA TEA LICENSING COMMITTEE

Special Export Licenses.

Shippers of tea are hereby notified that special export licenses available for the shipment of teas unshipped at the 31st March, 1935 (shipment of which may be effected up to and including he 30th June, 1935) will be issued in exchange for ordinary export licenses on application to the Joint Controller concerned and before the expiry of the first 14 days of the following year, *i.e.*, not later than on the 14th April, 1935.

D. C. FAIRBAIRN,
Acting Secretary.

PROBLEMS OF THE TEA INDUSTRY

A review of the doings of the tea industry during the past year and an enquiry into the problems before it have been afforded by Mr. K. Miller in his speech as Chairman at the annual general meeting of the Indian Tea Association. The year reviewed is also the second year of the scheme for regulation of exports. Mr. Miller expressed the opinion that the results have not fulfilled the expectations of the industry when the scheme was launched. The prime reason for this view is, presumably, the circumstance that the stocks in the United Kingdom on February 28 were 300,000,000 lbs. as compared with 286,717,000 lbs. in February 1934—an increase of 13,283,000 lbs. The increase in the stocks in London has been caused, besides the general obstacles to international trade and the low purchasing power of the consumer, by the additional exports of countries which have not become parties to the international agreement. This increase of exports by the non-restriction countries is not a circumstance peculiar to this scheme. Considering the fate of other schemes of restriction in recent economic history, the tea industry must be considered to have been fortunate. During the first year of the working of the scheme, the industry realised a considerably higher level of prices and many companies were able to produce far better financial results than before. We do not believe that either the necessity for reconsidering the position at this stage or the presence of higher stocks in London can be deemed to be a sufficient reason for continuing the scheme or otherwise growing less enthusiastic about its continuance.

THE INDO-BURMA PETROLEUM

Branches:
CALCUTTA BOMBAY CHITTAGONG

All that can be said, therefore, is that at the end of the second year of the tea restriction scheme, it has become necessary to examine the position in greater detail ; to effect such changes in quotas as may be necessary and to take up the problems which at the time of the inception of the scheme had been implicitly shelved. Mr. Miller points out that "when we entered into the scheme for regulation of exports it appeared that only a short period of control would be required to restore trade equilibrium. The development in subsequent years has, however, made it seem crtain that a longer period of control than was at first envisaged will be necessary, unless we are to face the alternative of a lengthly war of attrition which would bring in its train ruin to so many estates and to thousands of people connected with the industry". We do not believe that two years ago, when the formulation of the scheme was completed, there was any reason to think that trading equilibrium was near or that the path to it was smooth. As the scheme was designed only to restrict exports, it did not tackle the whole question of the balance of supply and demand.

The utmost success imaginable for the scheme of restriction could not have obviated the attempt at deliberate and careful solution of the industry's problems. It must be said of all modern industries that their problems are two-fold. On the one side, they have to secure a regulation of production, on the other, there has to be a stimulation of consumption. The problems of the tea industry are in this view typical of the problems of modern economy; and it is no small comfort that the tea industry no only in foreign countries but in India also is fully alive to their importance. The first step towards the solution has been already taken by the International Committee, which in consequence of the unfavourable stock position recommended that the export allotment for 1935-36 should be reduced to 82½ per cent. This recommendation has been accepted by the Governments of the contracting countries. And it may be hoped that the decision will bring about that improvement in the market which is necessary if the tea companies are to work on a remunerative basis.

While thus the export markets are being regulated on this basis, each tea-producing country has to solve its own problem of restricting production. It is well-known that the tea industry in India has been working for some time a scheme of voluntary restriction of output; and the strain of working on a voluntary basis being as it is, the industry addressed the Government of India for sanctioning some from of legislative sanction. The Government of India with their Pharisaic horror of State interference in the affairs of industry rejected the application of the industry on two main grounds: (1) that there are but three more years to run of the period for which the regulation of exports was fixed; (2) that they do not consider that control of production would be likely to benefit the potential consumers, to whom the price of tea is a very important consideration.

* * *

It is strange that the short tenure of the Tea Restriction Agreement should be cited as a reason for the Government's indifference to the conditions in the Indian industry. It is not clear whether by citing this as a reason the Government intend to suggest that by the end of the restriction term trade equilibrium would be reached. To such a view, Mr. Miller has afforded an effective answer. The estimates of the International Tea Committee of the potential output of tea in the three contracting countries in 1938 show that there may be an excess of 350 million lbs. over the probable consumption. This estimate, far from obviating a scheme of internal restriction, only renders it all the more necessary. And the Government of India cannot plead with any reason that the short tenure that is still left of the Tea Restriction Agreement is an argument for their non-interference. If on the other hand, they suggest that the position cannot be fully apprised till 1938, the knowledge which they seek will have to be bought at a very dear price, indeed. For, the continuance of unrestricted production will have brought about a chaotic state of affairs rendering the industry in India altogether unable to take advantage of international regulation.

As for the price to the consumer, the tea industry can well claim that during the two years in which it has been carrying on a scheme of voluntary restriction it has kept the price well within economic levels and within the means of the average consumer. Besides, we have always taken the view that the interests of the consumer cannot in the long run be furthered by indifference to the losses which each industry incurs. On the other hand, the consumer will be best served by widening the circle of industries which work on a profitable basis. But whatever the reason or lack of reason behind the Government's decision, it has now become necessary for the tea industry to regulate its producion only by the voluntary efforts of is constituent members. We are glad to learn from Mr. Miller that in formulating the scheme the industry is giving the fullest consideration to the differential circumstances of the various units.

On the marketing side, the tea industry is thrown back almost entirely on the power of propaganda. So far as the principal export markets are concerned, the industry is now working a scheme of restriction of exports; and so far as one can foresee, regulation in this sphere can be abandoned only on pain of serious dislocation. For increasing consumption, therefore, the industry has necessarily to realise the potentialities in other spheres. From the international standpoint America is deemed to offer a very fertile field. The Tea Committees in the principal producing countries have all along given the utmost attention to this market. Comparatively large sums have been spent on tea propaganda in the United States. As the results have not been convincingly commensurate with the expenditure, doubts have of late arisen as to the wisdom of persisting in this course. Mr. Heathcote, who has also spoken during the week, struck a note of scepticism in this regard. We ourselves have on occasions expressed the view that the policy of the Tea Cess Committee in regard to America ought to be re-examined. And it was only the other day that the Chairman of the Indian Tea Cess Committee wrote to us presenting the other side of the case. For our part, we have only taken the position that the efforts to develop the American market should not involve, through a curtailment of resources, the neglect of the Indian market. The apparent conflict between the two objectives may, doubtless, be resolved by increasing the rate of tea cess; and we have for nearly a year accorded our ready support to such proposals. There can be no doubt that only by vigorous efforts to develop the potentialities of large markets like the Unied States and India can the problems of the tea industry be solved.

Ponder over the following:

First. The Reserve Bank announced fifty and odd vacancies for a temporary job. The magnificent remuneration offered was two rupees per diem. The candidates were clearly told that they would have to sweat alright before they could earn the two rupees. Only graduates should apply. The work was of a strictly temporary nature. It may be in all for a few weeks. Applicants were to present their eager faces in person at a stated address. For fifty temporary jobs on a salary which an incompetent cooly in Delhi junction makes in the day, there were ten thousand candidates. It was not a rain, but a downpour, of applicants. They came from all corners of Calcutta—from most mofussil stations of Bengal. The building was chokeful of crowding graduates. The overflow in the street was so heavy that the traffic was held up; and there was a perfect jam. The men who got into the building could not get out; the crowd in the street, who were all the time pressing towards the entrance of the building, were panting and perspiring; and some fainted in the crush, I understand. The officials, who were to make the selection, were non-plussed. Never did any advertisement in Calcutta papers have such pulling power. In sheer desperation, the police were rung up; and their assistance requisitioned to clear up the building and the streets.

Second. The vacancy of a stenographership in the same office was advertised. Applications received exceeded eight hundred.

Third. For the share department of the Calcutta Office of the Bank, one with legal knowledge was advertised for. People from distant provinces like the Punjab have come on pilgrimage to Calcutta, though the warning has been given that no one should apply in person.

Such is the predicament of Young India. Each one of these youngsters has had a small fortune spent on his education; and parents had, perhaps, stinted themselves of every manner of comfort and, possibly, of a good many necessaries; some parents had piled up debt that they might give a suitable education to their sons. At the end of it all, the boys could not get jobs on salaries even equal to what they were spending as students. There are crowds and crowds of them. In every province, in every town and village, unemployment amongst educated youngsters has reached tragical proportions. The episodes at the Reserve Bank have moved me deeply; all thinking men must be as profoundly stirred and disturbed. "If you have tears, prepare to shed them now."

Day in, day out, I receive scores of these youths. I receive hundreds of letters. All of them wish to get fixed up in the Reserve Bank. From this point of view, life for Sir Osborne Smith has become hell. He is inundated with commendations from highest quarters for jobs which do not exist. I remember an occasion in London when, on the arrival of the Air-mail *dak* from India, he opened letter after letter and flung a dozen of them at me with the remark. "Look at it. All these are applications for jobs in the Reserve Bank. What can I do?" I handed him back half a dozen letters from my own *dak* and replied: "I can understand your being bothered. You are to be paid for it. Why should I be bothered?" Levity apart, the nightmare of middle-class unemployment is shown up in all its horror when an institution comes into being, regarding which there is country-wide feeling that it should need no end of hands to run it. The simple fact of the matter is that over 1,000 men from the currency offices and nearly 500 from the Public Debt Department of the Imperial Bank have been absorbed in the Reserve Bank; and, for the time being, there will hardly be any new appointments made. A widespread recognition of this fact should end a lot of agony and expense and worry for all. The Reserve Bank cannot solve the unemployment problem. It is for the Government and for the leaders to realise the tragedy that is present in every home and in every place and to put their heads together for evolving an apt solution. Increased economic activity, increased standard of living—these alone will and can banish the ghost of unemployment. These cannot be induced by the bureaucracy's faith in its infallible wisdom and its contempt for the views and suggestions of everyone else. Sir James Grigg is reported to have visited a few villages in the Punjab. I would like to take him round and make him see for himself the origin and cause of gold exports, the extent and degree of distress caused by unemployment amongst educated youths. Sir James is not ashamed of his cheerfulness. His remarks in this context are worth quoting:

> "Pandit Pant complained about my temerity in daring to be cheerful in a country like India, and he attributed my cheerfulness to the fact that I had been left completely unmoved by what had been called the dismal science. If cheerfulness is one result of not being over-impressed by the bewildering nostrums of

> modern economists, I for one shall regard that as an additional inducement not to pay too much attention to them until they sing much more in unison than they are doing now".

I do not invite him to study economics. I urge him to study facts. The facts are not to be found in Delhi—nor in conducted tours to villages in the company of those beloved of bureaucracy. If Sir James can remain cheerful after he has seen Rural India with eyes that understand and a heart that feels, I would credit him with a measure of mental composure and a degree of philosophy which is far too good and far too high for humans.

The real trouble is that the folk in Olympus see and know an India which is farthest from reality. They come in contact with persons who like to say things palatable to them. If others sing a different tune, they are put down as people without knowledge, without responsibility—as belonging to a selfish caucus who wish to exploit the masses. As a sample of the kind of abuse hurled at them, I may quote the following passage from Sir James's speech:

> "Knowing that they will never have to undertake the responsibility of carrying out their promises and of putting their wild cat schemes into effect, they with Becchanalian abandon promise everything and eveybody. They go on repeating chimerical and Gargantuan suggestions despite the fact that it has been demonstrated over and over again that they would bring untold misery to the people. They go on deceiving the people by telling them that they can all be made rich by a stroke of the pen and they jeer when more sober and responsible people point out that making a poor country rich is a long and toilsome job."

Are Indian leaders shirking responsibility? It is Sir James and his friends who deny Indians responsibility. It does not lie in his mouth to taunt the Opposition as regards responsibility for their proposals. We put forward proposals; we are prepared to work them and show results; we are prepared to take full responsibility for results; shall we have the chance? If Sir James is in a position to answer this question in the affirmative, he can justify his superior sarcasm. Not otherwise.

The fact is that, in the very nature of the case, the Finance Member in India can have no personal, direct and first-hand experience of economic distress, of the horror of unemployment. He himself is in rare physical and mental comfort. He gets in India a salary fully double of what he might be getting in his own land. He lives in a bungalow which occupies space twenty times as large as the flat he should have been used to. Where he might have had two servants, he is now surrounded by an army of Jamedars, chaprassis, menials and attendants. He can be dogmatic; he can make categorical assertions; he need give no reasons; he need labour no arguments; *his word has more sanction than our reasoning;* he can even indulge his whims and fancies, his fads and oddities; he has perfect impunity; his word is, verily, law; he can translate his opinion into action, be his opinion ever so wrong. Absolute license of speech and unfettered freedom of action. As man, he may be of less calibre; but as Finance Member, his puissance is unquestioned. Pelf, power, and plenty—with these, how can he understand poverty and misery; how can he visualise the plight of those into whose lives the sun has never shone, who have known no smile, and whose living is perdition worse than death?

Moreover, he is unapproachable. The procession of unemployed cannot storm his residence. No one can approach him for an introduction. No one can importune him for a recommendation. That is why he talks so glibly that recovery can be only slow and gradual. Has there been even this slow and gradual recovery? I doubt it. I am sure it is not there, so far as the masses are concerned. Even if the answer to this query is 'yes,' is not the critical condition of a patient, his vitality run low, a case for speedy and drastic treatment on the part of the doctor? Will the patient survive all this slow and leisurely business? While doctors wrangle over the diagnosis, the malady may well prove fatal. The outflow of Rs. 225 crores of gold is proof that the very last reserve of the population has disappeared. The last ounce of vitality has been drained. Each day brings the tale of a student here or a family there driven to suicide by desperate poverty. For each reported case of suicide, there may be scores of cases where the quietus is attained not by self-inflicted violence, but by emaciation and sheer lack of stamina and sheer oozing of vitality. Starvation stalks the land—more terrible than suicide. I am not indulging in hyperbole. I state just the cold facts. From my own personal knowledge. The occasion cries for instant relief, for bold and vigorous recipes. 'Slow and gradual' may be alright for those in possession of every measure and manner of luxury; but the universal distress in the land demands energy and speed if remedial measures should not prove too late or too meagre.

Now, all this talk about universal misery may look unreal to the gods in Olympus and their tin-gods in the cities. They are in apparent prosperity. Government finances are now freed from vexatious problems. Giltedge stands high. Borrowing is easy. Budgets balance. Salary cuts have been restored. Any amount of remittances could be effected to the Secretary of State. Compared to, say, 1931, the lot of the Finance Minister in 1935 is a bed of roses. He is thus lulled into a sense of false security. But the very comfort of the Government is due to the discomfort of the masses. Let me here extract a passage from Clive Street Gossip of March 25, 1933:

"To my mind the distress gold that has been realeased from Indian hoards is a significant link between Government finances on the one hand and the country's economy on the other. Paradoxical as it may seem, it is true to say that the very distress of the population is the direct cause of the very comfort of the Government. To understand this paradox, one has to realise the part that distress gold has played in the improvement of Governments financial position.

But for the distress widely and acutely prevalent in the country, all this gold would not have come out of rural parts.

But for this gold coming out, India could not have exported the yellow metal to the amount of Rs. 120 crores.

But for these gold shipments of Rs. 120 crores, India could not have had the colossal favourable balance she has been enjoying.

But for these colossal favourable balances, the Government of India could not have accumulated large sterling balances.

But for these large sterling balances, the Office could not have met their normal requirements and repaid some of the maturing sterling loans, without recourse to large fresh borrowings in the London market.

But for the spare borrowing of India in the London market, India sterling stocks would not have registered such sharp advances.

But for the sharp advance in the price of India sterling securities, rupee securities in India would not have enjoyed booming conditions.

But for booming conditions in rupee giltedge market Government of India could not have put through their cash and conversion loan operations with such remarkable succes.

But for the remarkable success of the loan operations, the Treasury Bills policy of the Government could not have been so scientific and successful.

But for the scientific Treasury Bills policy, interest charges should have been far higher.

But for the saving in interest and other charges, the balancing of the budget would have been far more difficult."

The pillar of Government finances is the tottering millions. Sir James should not feel bucked up by his comfortable position; he should see in this a sign of extreme disquietude. By the same token, some of the city interests are lulled into a false sense of security by the sectional prosperity enjoyed by certain industries, and by the livelier stock exchange activity. All these are not indices to the economic condition of the masses. I will mention one conclusive index—the wholesale price index for jute. It was 45 in January. And, yet, jute is a hundred per cent. monopoly of India; Jute, not giltedge, interprets Real India.

Twelve months ago, I walked into the Chief's room in the Bombay Office of Lloyd Triestino; and, in unison, Mr. A. C. Webb and Mr. W. Denso vouchsafed the stunning information: "Our advertisement allotment is now fully used up". To which I replied: "You are making a mistake. I am the Managing Editor, not the Advertisement Manager of *Indian Finance.*" Thus began a contact which has given me rare pleasure during everyone of my Bombay visits. We sit in that cheery office—buoyant Denso and suave Webb, with the helpful S. S. Rajan as an onlooker; and we talk for hours on finance in all its aspects, in relation to most countries, in reference to what was, what is, and what will be. Amongst practical businessmen, I have rarely come across anyone so well-informed and so eager to know what there is yet to be known, as Messrs. Denso and Webb. In their particular work, they are the last word in efficiency. The Italian Boat is to-day a red-hot favourite with passengers, high and low. Comforts are plentiful; food is excellent; and atmosphere homely and congenial. Mr. Webb is, I understand, leaving India to take charge as Joint Agent in London of the United Italian Lines Agency. This is a sore loss to Bombay where he was popular in all sections of society. But one should not grudge a preferment so covetable to one so worthy. It is, however, a comfort to know that we will yet have Mr. Denso, the present Agent General, who is as keen at his work as he is beloved of everyone he has contacted with.

In the death of Mr. T. A. K. Sherwani, Nationalist India has lost a zealous worker, the Moslem community a far-sighted and sincere leader, and the Assembly a shining light in the Opposition. To know Sherwani is to love him and to esteem him. He had a rare culture, simple dignity, and attractive but subdued conviviality. He has played an important part in the growth of the sugar industry in India, being himself connected with two factories as managing agent. This blend of politics and practical business gave him poise and purposiveness. I have known hib in political contacts; I have met him on his business errands; and I have spent hours with him in the more intimate company of friends. He was just the same Sherwani in every relation of life—a man of word, a man of courage, a man of practical idealism, and a man of burning zeal for his country and for his cause.

OLYMPUS

(FROM OUR CORRESPONDENT)

New Delhi, March 26.

This has been the Grigg week. Sir James Grigg has not only held his ground brilliantly but has short forth into the enemy's camp. He is easily the most combatant Member of the Government of India. He is neither sparing in language nor too discreet in manner. He is as hard and as biting as any one ever was on the Government benches. And his reason is simple. He perceives that the Congress people are out for political propaganda ; and he feels justified in dealing them blow for blow.

* * *

It began like this. Mr. Bhulabhai Desai made an analysis of the budget, which Sir James Grigg described as "malicious." Mr. Govind Ballabh Pant got his chance next and, in the words of Sir James himself, "Pandit Pant" made "mildley offensive personal remarks" Mr. Pant had described the Finance Member as Robinson Crusoe and one who had kicked the very ledder he had risen by. And Mr. Desai added another bit of his subtle attack on the British people.

* * *

All this further embittered the Finance Member ; and he called Mr. Desai's analysis of his budget "not only malicious but unjust and unfair." Sir James perceived in the Congress plan nothing but communistic doctrine ; and he said so. Perhaps, that was an attempt at counter propaganda, which Sir James considers fair when dealing with an enemy of the kind he has in the Congress Party.

* * *

But leaving aside these interesting tit-bits, the speech of the Finance Member has left a very significant impression on my mind. He will stand for protection to key industries and such others as can promise substantial results atleast in a generation, but he will not "hold the ring" for the Industrialists to knock-out the consumer, a majority of whom, he said, are always poor.

* * *

The forthcoming session of the Federation of Indian Chambers of Commerce may have something to say about it, but there is no doubt that the Finance Member has very definite views on the matter ; and his ability is so remarkable that the Government of India will follow his lead. In fact, in his subject there is no one in the Executive Council with sufficient knowledge or experience to challenge his views. Thus the industrialist in India has to face the possibility of the Government of India judging the question of protection from a different angle hereafter, namely the extent of sacrifice which the consumer is called upon to make and the extent to which protected industries can be allowed to make profit. Sir James will have only the very efficient taking due profit and the inefficient must go to the wall. Perhaps, there is already an indication of this change of policy regarding the Government's conclusions on the Tariff Board's report on healds, etc. which recommendation has been rejected by the Government.

* * *

One good result of Sir James Grigg's tactics is that it has brought others out. For instance, the Congress Party has felt compelled to enunciate its economic and fiscal policy. Mr. Desai stated it to be one of self-sufficiency for India along with nationalisation of key industries. "I would rather be with Milligan the Socialist then with Grigg the Free Trader" was Mr. Desai's declaration.

The European Group, too, is by no means solidly behind the Finance Member. This is not only borne out by a remarkable speech by Mr. Milligan the other day but by a very interesting article contributed to *Boy's Weekly* of this by Mr. Buss who represents the Associated Chambers of Commerce in the Assembly and, therefore, speaks with a much clearer title on the subject than any other Member of the European Group.

* * *

Mr. Russ has attacked the "financial orthodoxy" of Sir James Grigg and has made a plea that the Finance Member is wrong in waiting for permanent surplus to accrue before he can give relief. Mr. Buss holds that there is no such thing as permanent surplus and that every years' surplus should be used for relief in taxation. The same is the opinion of many others in the House ; and I shall not be surprised if the House votes for such relief in taxation as would be based on the calculation of the combined surplus of the current and the next year.

* * *

Another aspect of the attack on the Finance Member is made by Mr. Manu Subedar who has come here for the meeting of the Federation. Writing in the same weekly, Mr. Subedar enunciates the correct tariff policy which the Government of India should pursue in the real economic interests of the country.

* * *

Whereas, tactically, both the Government and the Opposition have been scoring against each other in a manner that a fair balance is maintained, I must say that on the point of the Indo-Burnese financial adjustments the Opposition has added a feather to its cap by the manner it exploited the unconscious error made by the Finance Member in answering a question on the spur of moment.

* * *

Of course, the debate will have no effect on the views of the Tribunal ; but it did serve the purpose of the mover Mr. Vissanji who wished to do propaganda against its *personnel* by associating Justice Rowlatt with Jallianwala Bagh and Mr. Amery with Tory colonial policy. And the fact that both the Indian and the Burman representatives joined hands in condemning the Tribunal's *personnel* and that the European group, too, remained neutral gave the Opposition a decided advantage against the Government.

* * *

Sir James Grigg and Sir N. N. Sircar kept alert and prevented the debate from deviating into the merits of the financial case but the result of the debate was that Government stood isolated and the Tribunal's finding is prejudiced by the debate. The Finance Member promised to tell the Secretary of State not to come to a conclusion without giving the Assembly a chance to discuss the Tribunal's findings ; but considering that two previous pledges on the subject had been disregarded by the Secretary of State, the Opposition was not sure whether Sir James Grigg would fare better at the hands of the Secretary of the Great Moghul at White Hall than his predecessors.

* * *

Any way, the war mentality that is now permeating the Assembly, on both the sides, is responsible for the unusual development that the Finance Bill, for the first time, will not be passed by the due date and some special measures will have to be taken to ensure that taxes are collected from first April. In this bargain, for which Government blames the Opposition for breaking their word and *vice versa*, the Assembly may find itself on the horns of a dilemma that there may be no import duty on wheat on first April. I hope, however, that this tragedy will be averted.

(FROM OUR CORRESPONDENT)

Bombay, March 26.

The tragedy at Karachi has overshadowed all other topics in the Western capital. At the moment of writing it is not yet known definitely whether an impartial enquiry of the incident will be allowed and without such an enquiry it is difficult to assess the blame attaching to the parties concerned. Newspaper comments on events with a communal significance are generally coloured and suffer from over-emphasis. Tempers are frayed and personalities enter into discussions. It is, therefore, of the utmost importance that the Government should agree to an enquiry into the incident by a Committee whose personal are above all suspicion of communal bias.

An important issue is now before the Tariff Board—the question of protection for the woollen industry. On the decision of the Board will depend the fate of an industry which in other countries has proved a major industry with immense possibilities. It is true that the woollen industry is still in an undeveloped stage in India and is dependent for raw materials on foreign imports. But that is no reason, why, with protection, it should not develop into an independent and healthy industry.

Opinion on this matter, however, is sharply divided. The no—changers generally represent the interests on the trading side. Of the many arguments put forward by this side the main are: that the Indian industry can never meet the demands of the population and that it is unfair for an industry, already protected by revenue duties to the extent of 35 per cent., to seek further protection; that protection means a double tax on the consumer *viz.* higher prices and higher taxes to meet the loss in Customs duties; that the woollen industry does not fulfil the conditions laid down by the Fiscal Commission; that protection to the woollen industry would destroy the growing hosiery industry; that the poorer classes in the north of India to whom warm cloth is an absolute necessity, are benefited by the importation of cheap foreign woollen goods made chiefly of shoddy which are so different from anything made in India that it cannot really be said that they compete with the Indian manufactures. The chief protagonists of no-protection are the Marwari Chamber of Commerce, Calcutta, The Bengal Chamber of Commerce, the Blanket and Shawl Traders' Association, Calcutta, The Delhi Piecegoods Association and, to a certain extent, the Karachi Chamber of Commerce. Nearly all other bodies have supported the plea for protection and the Indian Merchants' Chamber at Bombay is one of the staunchest. There are weighty considerations on both sides and it remains to be seen how the Tariff Board solves this knotty problem.

The motor Taxation Bill was torpedoed by the Bombay Legislative Council on Saturday and Bombay reverts to or rather continues in, the prehistoric toll system of road taxes. It is really a sad anachronism that such an ancient and crude method should be allowed to linger in a town that boasts of modernism in every other way.

It was apparent from the beginning, however, that there was strong feeling in certain quarters against the Motor Taxation Bill. While the owners of private cars heaved a sigh of relief at the proposed abolition of the complicated and annoying system of road tolls, the owners of commercial vehicles and lorries cried out against the measure. They pointed out that the proposed tax was unduly severe on them and was not at all equitable. There was a great deal of substance in their contention and when, in spite of their protest, the Bill survived the first reading, albeit by the narrowest majority, they went on strike for a day to prove their resentment.

The Government realised rather late that there was such strong feeling against the Bill and that a generous compromise must be made if the Bill is to find its way to the Statute Book. Mr. R. D. Bell, the Finance Member, therefore, consulted the members of the Treasury benches and agreed that a definite offer should be made on behalf of Government that half the proceeds of the motor taxation should go to local bodies and that the remaining half should be devoted to the improvement of provincial roads. But it was too late. The opposition had already decided to torpedo the bill and the Second reading was rejected by 47 votes against 35.

It is, of course, open to the Governor to certify the measure. But it is hardly likely that the clean record of the Bombay Council for fifteen years under the Montford Reforms will be broken on the eve of framing the new constitution that is claimed to confer complete autonomy on the provinces. Besides, the local bodies including the Municipal Corporation of Bombay are known to be opposed to the bill.

The situation is all the more intriguing because, in the expectation of a safe passage of the Bill, the toll auctions for 1935-36 were not held and unless these are rushed through in course of the next few days, there will be no toll contractors to levy tolls on vehicles and no statutory tax on them either.

The figures of Bombay's foreign trade for the first eleven months of the present financial year that is fast running to a close have been published and they uphold the reputation of Bombay as one of the busiest centres of trade and commerce in the East.

The aggregate value of the foreign trade of Bombay for the month of February, 1935 amounted to Rs. 12.13 crores showing a fall of Rs. 4.15 crores or 25 per cent. from the figures of February, 1934 but a rise of Rs. 42.31 lakhs or nearly 4 per cent. over those for February, 1933. The fall is accounted for by the smaller shipments of gold and by the contraction in the imports of gold. There were improvements, however, in the imports of merchandise and exports of silver—a result of the Silver Policy of Mr. Roosevelt.

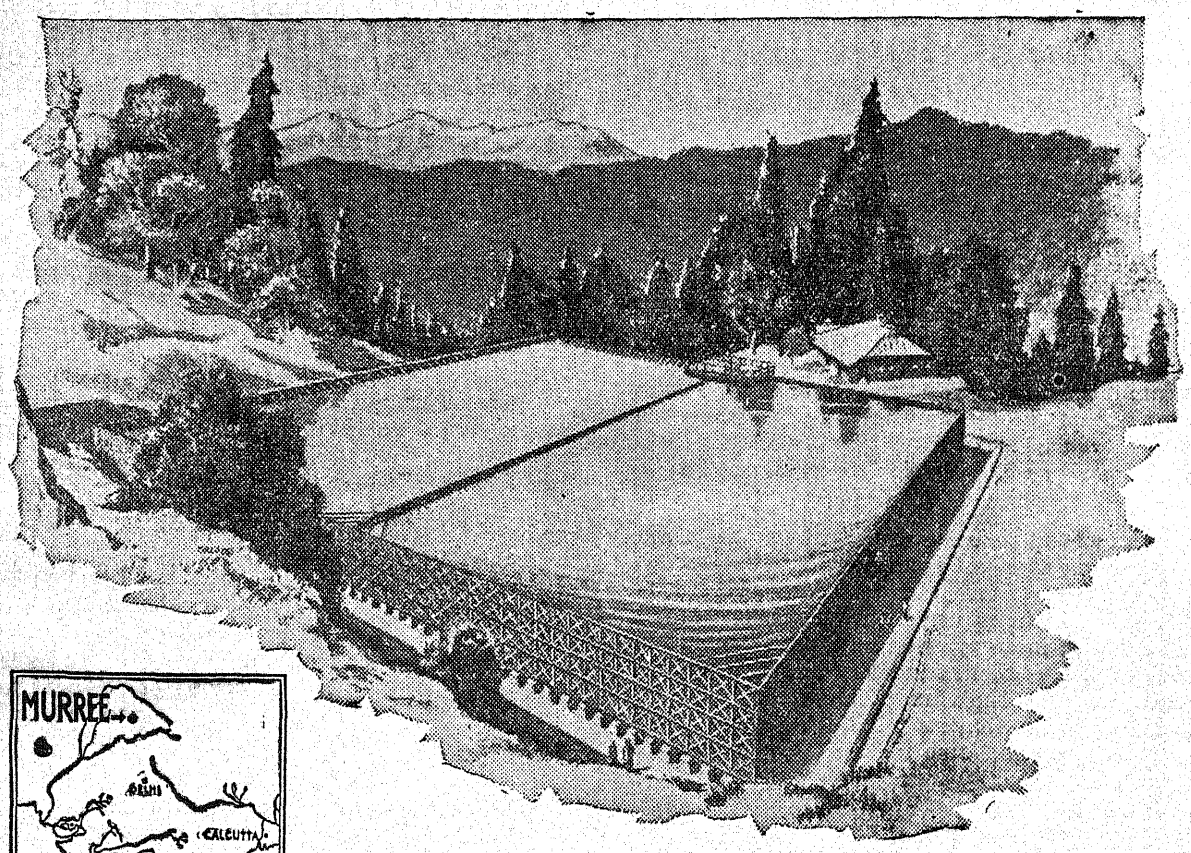
The trade statistics of the first eleven months of the current financial year show both in imports and exports an expansion of Rs. 6.74 crores, or nearly 16 per cent. and of Rs. 1.61 crore, or over 2 per cent. respectively as compared with the figures for the corresponding months of the previous year but a contraction of Rs. 1.86 crores, or nearly 4 per cent. and of Rs. 53.86 lakhs, or nearly 7 per cent. as compared with those for the same period of the year 1932-33.

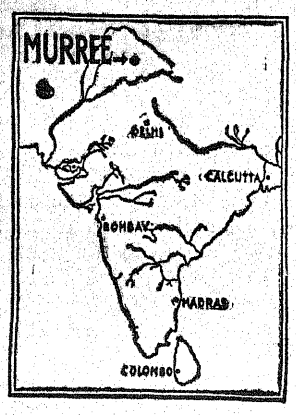
Imports of merchandise amounted to Rs. 4.42 crores, showing an increase of Rs. 77.38 lakhs, or 21 per cent. and of Rs. 81.12 lakhs, or over 22 per cent. respectively over the figures for February, 1934, and February, 1933. The increase of Rs. 77.38 lakhs is shared by most of the principal articles of import except silk manufactures, machinery and millwork and aniline dyes.

Exports of Indian prodcce amounted to Rs. 2.53 crores, showing an improvement of Rs. 5.77 lakhs, or over 2 per cent. over the figures for February, 1934, but a decline of Rs. 98.32 lakhs, or 28 per cent. from those for February, 1933.

The improvement of Rs. 5.77 lakhs is chiefly attributable to large shipments of raw cotton, cotton manufactures, and raw hides and skins.

Exports of gold were valued at Rs. 4.33 crores as against Rs. 9.95 crores and Rs. 4.38 crores and those of silver to Rs. 57.59 lakhs against nil in February, 1934, and Rs. 44,665 only in February, 1933. Re-exports of foreign merchandise increased by Rs. 10.43 lakhs and Rs. 11.23 lakhs respectively to Rs. 24.97 lakhs.





LARGEST PRESSED STEEL TANK IN THE WORLD

3½ MILLION GALLON RESERVOIR IN THE HIMALAYAS FOR MURREE

On a site so inaccessible that aerial-ropeway and bullocks provided the only possible forms of transport —where snow for a quarter of the year prevented all possible progress : under such conditions this immense steel tank was completed in under six months, a fitting commentary on the efficiency and resources of the Braithwaite organisation.

SOUTH INDIA

ECONOMISTS OF 1st LINE BEACH

(FROM OUR CORRESPONDENT)

Madras, March 26.

The debate of the Madras Legislative Council on the Adjournment motion to discuss the inadequacy of the measure of protection for the rice growers occcurred a little too late to be covered in these columns last week. I was content then to refer to the sentiment among the business community and the opinions of the leaders. But a full dress debate in the Council must normally be referred to in detail in these columns. For one thing, the Council has a formal representative authority to which neither businessmen nor even the commercial or agricultural associations can lay any claim. But the importance of the debate rests solely on the status of the Council. For, considering the importance of the subject to the province and the genuineness and depth of public feeling in the matter, the debate was one of the poorest imaginable. The supporters and opposers of the motion alike allowed themselves to indulge in economic theses somewhat out of touch with the main question at issue and thus got into waters clearly too deep for them. The import duty on Siamese rice has at the moment little to do with the laws of political economy. It is a simple question of expediency. One can oppose or support the proposal of an import duty or any other measure to reduce or prevent such imports, according as one believes or not that the vitality of the rice-grower in tht South is fast ebbing away and a dose of strichnine is urgently needed. If the debate were devoted to proving or disproving such a critical state of the average agriculturist's economy, it would have had some touch with reality. Instead, the House had all of a sudden converted itself into a mock academy of economists, one section holding forth the high-sounding platitudes of free trade and the other conjuring up pictures of the industrial worker's pockets bulging with the increased purchasing power of the agriculturists. And yet very few who participated in this debate had much of a claim to speak with authority on pure economic questions. Some of them were wofully ignorant even of the elementary facts of Indian economic life. One member asserted that the industrial workers are more numerous than the agriculturists! His passion for his cause is clearly stronger than his apprehension of facts.

But none of the positions taken by these speakers is altogether defensible. Much as I have, in fact, supported the demand for the prevention in whole or in part of these hated interlopers from Siam or Indo-China, I would be the last to assert either that this prohibition would far enrich the rice grower or that the rice grower would share these artificial gains with those classes who had formerly stood to benefit from cheap foreign rice. Who can say to what extent the price of rice will obey this magic wand of an import duty? What class will stand to benefit most from such a rise, if and when it happens? And how much of this increased purchasing power will flow into the coffers of industry? And what guarantee is there that the industry will share with labour such enhanced profits? Speaking for myself, I would love to see the members, especially those who come from the mofussil, rise in their seats one after another and acquaint these economists of First Line Beach with the harrowing poverty of the agriculturist classes. They could have dwelt at some length on the effect on a glutted market of fresh imports and put the question squarely on the basis of sheer expediency, instead of trying to work out the incidence of an increased price through the channels of distribution.

But one can understand the supporters of the motion persuading themselves that the consumers of imported rice do not in the long run suffer by this new imposition. They may have reasoned wrongly. They may have overstated their case. But their instinct is unquestionably sound. They have not made the mistake of seeing the wood in the trees. They have a better sense of the solidity of the national economic interest. But the opposers have lost the lead of common sense in weighing the rival claims of free trade and protection. I have said already that the proposed duty on foreign broken rice is not a protective one, as it is understood in economics. It is, if I may say so, frankly political. And yet, the members, who chose to oppose the motion, thought the occasion apt for holding forth on the virtues of free trade. Mr. Langley was the ready Arch Priest of this obsolete fetish of free trade. In the most engaging manner, he was tracing, link by link, the chain of consequences leading up from an import duty on Siamese rice to a complete blockade of India's exports. "Directly we start interference with trade," said Mr. Langley, "inevitably it reacts on ourselves in ways that we cannot possibly have contemplated at the time." And the protectionist bill of charges, according to him, carries an infinite number of items ranging from the cargo carried by the vessels bringing Siamese rice on their return journey to the loss of our export trade to France in grounduts. Mr. Langley would have us think that the imports of foreign rice cannot be interfered with except at such immeasurable and staggering costs. Doubtless, he is sincere in his convictions. The trouble with most Europeans in India, as, indeed, of all business classes, is that they cannot see a point except when it is to their direct advantage. The European business community in India had not a shred of doubt that safeguarding duties against Japanese imports were at once just, wise and feasible. And yet, Japan had far more power to inflict harm on India than France and all her Colonies put together. The preferential duties on British steel lost India her exports of rice to Japan. Half the troubles of Indian rice to-day are due to this incipient Imperial Preference. When at the instance of the Associated Chambers of Commerce, India passed the safeguarding Duties Act, no one in his senses could have been in any doubt that it meant the loss of our export trade in cotton. It was only after protracted negotiations that Japan could be persuaded to lift the boycott on Indian Cotton. Those, who wax eloquent about a favourable balance of trade of Rs. 15 lakhs were enthusiastic supporters of the discriminatory action against one of India's best customers. The theory of Free Trade then had little or no appeal to them.

If Mr. Langley and his friends of the European group could be excused their devotion to free trade, one can hardly imagine any excuse for Indian Members who followed them into the lobby. There was at least one among them who raised the plea that the consumer should not be denied the benefit of cheap imports from abroad. It never occurs to these champions of the consumer that there is hardly anything on God's earth to-day which some foreign country or other cannot produce cheaper than India. And according to this "consumer" brand of economists, India ought to live on cheap imports without internal production of any kind. It is a common joke about France that it is a country in which people eke out a precarious living by tipping one another. Of India, these people would, perhaps, have it said, that it is a country which has a luxurious standard of living with cheap imports from all over the world and little of her own production.

Economic dilettantism is, no doubt as rife among protectionists as among free traders. But in India protection is commonsense, even as free trade is com-

OF THE THREE SAFES

IN THE

BIG COTTON FIRE

AT REAY ROAD, BOMBAY

GODREJ SAFE ALONE

PRESERVED ITS CONTENTS INTACT.

The two other safes of another maker although exposed to much less heat failed completely

For more than six hours the entire fire fighting force of Bombay was engaged in ceaseless efforts to bring under control the big cotton fire at Reay Road which completely devastated the Hyderali Mfg. & Pressing Factory with all its godowns containing thousands of cotton bales. Of the 3 safes enveloped in this Fire, one was a Godrej Safe bought 20 years ago in 1915 measuring 60″ × 30″ × 26″. The two other safes of a different make but of the same size were standing in a place not so much exposed to the fire-heat, yet their contents were burnt while the valuable documents and books of accounts placed in the Godrej Safe were unharmed though the Godrej Safe was subjected to far more intense heat.

See what the owners of the Cotton Factory write:—

BOMBAY 12th March, 1935.

The Manager,
GODREJ & BOYCE MFG. CO., LTD.,
Bombay.

Dear Sir,

You must have read about the terrible fire that entirely burnt down our cotton factory at Reay Road, on Friday last. The fire was so intense and prolonged that steel girders were burnt and twisted like wire rope and it took more than six hours desperate fight by all the fire brigades of Bombay, before the fire could be brought under control. The entire building and all the stocks containing thousands of cotton bales were completely burnt.

From this destructiveness of the fire we had supposed that everything was lost. So, it was a great relief to find that the valuable DOCUMENTS AND ACCOUNT BOOKS, ETC., PLACED IN A BIG GODREJ SAFE purchased from you 20 years back in 1915 by the late Mr. Jafferbhai Kanji, J.P., WERE UNTOUCHED BY THE FIRE; whereas the contents of two other safes of the same size but of another maker were burnt, even though the fire about your safe was decidedly far more intense.

We offer our heartfelt thanks to you for the great reliability and superiority of your Safes and wish we had not taken chances with other safes.

Yours faithfully,
G. J. BARDANWALLA,
for Husain J. Kanji, Receiver for
the Estate of late Mr. Jafferbhai Kanji.

THE BELGA PANIC

ITS REPERCUSSIONS ON STERLING GOLD BLOC'S HOPELESS POSITION

By Paul Einzig

Special for *"INDIAN FINANCE"*
(*By Air Mail*)

During the pastweek, the sterling scare came to an abrupt end. Although the factors which were responsible for the weakness of the pound continued to operate, their effect was for the time being rather more than offset by the revival of pessimism concerning the position and prospects of the Gold Bloc in general, and of Belgium in particular. There can be no doubt that the economic situation in the countries of the Gold Bloc has been effected adversely by the recent depreciation of sterling. It is true, that the the whole new depreciation amounted to 4 per cent. only, but since conditions were in many ways bordering on the unbearable before the fall of sterling, this additional pressure tended to produce an adverse effect out of proportion to its actual percentage.

Apart altogether from the material effect of the depreciation of sterling, its psychological effect in the countries of the Gold Bloc was by no means inconsiderable. The authorities, financial circles and the public were inclined, indeed, to become panic-stricken. They failed to understand how the fall could be regarded with equanimity in England. The story goes that a well-known French banker put through a trunk call to ascertain the views of an English banker friend of his. Irritated by the unwillingness of the latter to become panicky over the weakness of sterling, the French banker exclaimed, "This is all very well, but I should like to know what you will do when sterling depreciates to 50 francs." "Exactly what I am doing now," was the reply, "I shall be answering silly questions."

Before things could develop so far, however, a reaction was bound to set in. It is, indeed, unthinkable that sterling should depreciate with a run without any interruption. Every new depreciation is bound to increase pessimism towards the prospects of the gold currencies; and this again is bound to reverse, for a time, the downward movement of sterling. This is what actually happened towards the middle of March. While the Continent was becoming scared about sterling, it was also becoming thoroughly panicky about the gold currencies. Above all, the weakest of them, the belga, was regarded with growing concern. It is a matter of general knowledge that economic conditions in Belgium are worse than in any other country of the Gold Bloc. It is also well known that in no country is political pressure in favour of devaluation or of joining the Sterling Bloc so strong as in Belgium.

Following upon the depreciation of sterling, there was a revival of pessimism regarding the prospects of the belga. While the depreciation of sterling was going on, it diverted attention from the belga; but the moment it stopped, a strong selling pressure on the belga developed. In accordance with its usual practice, the National Bank of Belgium supported in Paris the spot belga but left the forward belga to find its own level. Consequently, the discount on forward belgas widened to the unprecedented level of 1 1/4 belgas for three months, and 65 centimes for one month. This latter rate is equivalent to nearly 40 per cent. per annum, which gives an idea of the degree of pessimism that prevailed concerning the outlook in the immediate future. Notwithstanding this fantastic discount, it was most difficult to find buyers, either among speculators or among Belgium banks. The latter might have employed some of their liquid funds in London without running any exchange risk by selling spot belgas and buying forward belgas. They did not, however, dare to do so for fear that they might require their resources in case of wholesale withdrawal of deposits by those desirous of transferring their capital abroad. Should such withdrawals occur, the banks would have had to repatriate their funds from London and they might have found it difficult then to find buyers for their forward exchange.

As a result of the Paris visit of the Prime Minister, the Foreign Minister and the Finance Minister, it was announced that steps were being taken to protect the belga. A loan some £15,000,000 was arranged for the Belgian State Railways in France and exchange restrictions were introduced to safeguard the belga against flight of capital and speculation. It is difficult to imagine, however, that these measures will make much difference in the long run. The strengthening of the technical position of the belga does not in the least improve the economic situation which is, after all, at the root of the evil. Nor can Belgium hope to bolster up her currency by pursuing a policy of economic isolation on the German and Italian patterns. There are few countries which depend upon foreign trade to such an extent as Belgium. She is not in a position to cut down her imports to a sufficient extent, nor to subsidise exports on a large scale. While the measures of technical defence may prolong the agony of the belga, there can be no doubt as to its ultimate fate.

Nor is Belgium the only weak link within the Gold Block. The outlook in Switzerland is also giving rise to growing concern, owing to the referendum which will take place at the beginning of June. The promoters of this referendum demand measures for preventing further cuts and a further fall in produce prices. They demand, in addition, an increase of expenditure for unemployment benefits and for public works. It is obvious that, should these measures be passed, the Swiss franc is doomed. During the ten weeks or so that separate us from the date of the referendum, the Swiss franc will remain consequently under a cloud, and as the date approaches the number of those who will play for safety by transferring their capital from Switzerland will probably increase. Notwithstanding the technical strength of the Swiss franc, the anticipation of a positive result of the referendum will put it to a very severe test.

The position of the Gold Bloc as a whole, apart from the local difficulties of its individual members, is anything but enviable. About four months ago, the Governments of the gold countries decided to abstain from further deflation in the hope of a rise in world prices. We pointed out at the time that there is no likelihood of such a rise; and, in fact, during the last few weeks, world prices have been moving decidedly in a downward direction. In the circumstances, if the countries of the Gold Bloc are desirous of maintaining their parities, they will have to resume deflation. Moreover, whenever they take steps to strengthen their own position and succeed in removing provisionally the suspicion of imminent devaluation, the result will always be a resumption of the fall of sterling. While the belga or any other currency of the Gold Bloc is weak, its influence provisionally neutralises the factors tending to cause sterling to fall. The moment, however, confidence is temporarily restored in the Gold Bloc, there is bound to be a new fall in sterling which again further aggravates the position of the gold countries. Thus, whatever the Governments of the Gold Bloc do is bad for them. If they fail to take effective measures to protect their currencies, a wave of heavy selling pressure develops. If they take the necessary measures, sterling depreciates further and their position becomes worse. It is probable that sterling will continue to depreciate in stages. After a certain degree of depreciation, a new wave of pessimism will develop towards the gold currencies, and this will cause sterling to recover to some extent. The Governments of the Gold Bloc will then resort to measures to safeguard their currencies, and stering will consequently resume its downward movement. There can be no doubt as to the final outcome.

London, March 19, 1935.

FAILURE OF CHEAP MONEY

DIFFICULTIES OF PROFITABLE INVESTMENT

BRIGHT PROSPECTS OF IRON & STEEL

GROWING TROUBLES OF GOLD CURRENCIES

By Francis Williams.

City Editor, *The Daily Herald, London.*

By Air Mail

Special for "INDIAN FINANCE"

London, March 19.

There is still no indication that cheap money, to which the present British Government is pinning practically all its hopes of industrial recovery, is proving effective.

The failure of cheap money to stimulate industrial revival is, indeed, one of the most serious financial problems facing the country.

In theory, the existence of a low interest rate, such as rules to-day, should stimulate industrial borrowing and thus have a potent effect in helping forward revival.

But in actual fact, as new issue figures show, total borrowings for home industry in February were not only less than half what they were in January but are even lower than a year ago.

Low interest rates are simply not doing the work that was expected of them.

That does not, of course, mean that there will be an abandonment of cheap money policy on the part of the Government. On the contrary, there is likely to be an intensification of it. And that policy is likely to be assisted by the latest international political developments, deplorable as these developments are from every other aspect.

But by increasing international uncertainty, as they must do, they make it clear that any possibility of a resumption of foreign lending on a substantial scale must be further postponed.

That means that British investors, whether private or institutional, must recognise that there is going to be no outlet for their investments overseas or, at any rate, no considerable outlet.

For this reason the pressure of investment funds internally is likely to grow ; and, in the absence of any big increase in internal demand for money in consequence of industrial revival, a further decline in interest rates seems inevitable sooner or later.

I would not, therefore, advise anyone to hood off investments in the belief that there is likely to be any very substantial increase in yields.

Unfortunately the search for good investment becomes more difficult. Broadly speaking, industrial revival seems to be petering out rather sadly.

There is, however, one exception, and an important one. That is the iron and steel industry.

Information I have received from leaders of the steel industry, from both the employers and the trades union side, convince me that the recovery in this industry, already substantial, is likely to continue for a considerable period yet.

All authorities in the industry itself anticipate a further boom period.

This happy state of affairs is due largely to the fact that the steel industry, unlike some other of the older industries, has had the initiative to go in search of new markets—new markets internally.

Its recovery has been accomplished in spite of the fact that both demand from the shipbuilding industry, which used to account for about 30 per cent. of steel production, and that from the export market, which used to account for approximately a similar amount, has fallen substantially. Instead of 60 per cent. between them, these two markets now only account for about 20 per cent. of steel production.

But steel has made enormous advances in the building industry. It has gone direct into the consumer goods market by the production of steel furniture ; it is developing all sorts of new uses, many of them individually unimportant but altogether adding up to a very substantial total.

And as a result of these new uses, steel production was not only substantially up in 1934 compared with 1933, but there is every indication that 1935 may break the 1934 record.

An investor looking around the present troubled economic position for good investment offering possibilities of reasonable yields on capital and some appreciation also might, therefore, I think, have a good look at the leading companies in the iron and steel industry.

It seems to me at the moment to be the industry with the best prospects of continuous prosperity.

Internationally the horizon is even more cloudy. At the moment of writing the £ is again declining in terms of gold currencies, mainly in consequence of the new Franco-Belgian pact to support the belga.

I doubt whether this fact will be permamently successful in view of Belgium's serious economic difficulties.

And it seems to me highly probable that, as a result of Germany's conscription decision and the increased tension on the Continent, there will shortly be a renewal of substantial withdrawals of capital from France, which will have the result of reversing the present tendency of the exchange rates and will lead to a decline of the gold standard currencies in terms of the dollar and eventually in terms of the £ also.

I think this is unfortunate ; for I would prefer to see the £ continuing its previous downward trend.

But as political uncertainty must almost inevitably bring in its train a resumption of policies of economic self-sufficiency, which will still further reduce international trade, I doubt whether in any event, even if the £ were to continue to fall, we could hope for any really important expansion in Britain's export industries.

CONSTITUIONAL AGITATION

By G. L. M.

It is now quite obvious that constitutional methods are not only the wisest but the safest: they can persuade British Democracy (which is sound at heart) and convince British Parliament (which is moved by sheer goodwill) without antagonising them or arousing their suspicion and ill-will. Other methods tend to *encourage* Die-Hards which is the deadliest political sin at present; worse still, they might *discourage* Sir Samuel Hoare and you know what *that* means. *He might even drop the new Constitution Bill.* And this is a calamity devoutly to be prevented.

I have recently tried to discover some of the methods of constitutional agitation available in our public life. They can, broadly speaking, be divided into two categories, (I) Inside the Legislatures and (II) Outside Legislatures. Let us take each of them in turn in the B. F. Bharucha manner:

Inside the Legislatures:

(*i*) Interpellations (followed by volley of supplementary questions).
(*ii*) Resolutions.
(*iii*) Motions of adjournment.
(*iv*) Non-official bills.
(*v*) Speeches against Government measures.
(*vi*) Cuts on Demands for grants.
(*vii*) Voting in Non-Government lobby.
(*viii*) Points of Order (and of Disorder whenever possible).
(*ix*) Interruptions and interjections.
(*x*) Acceptance of ministerships and drawing of salaries (in the Provinces).

This is not exhaustive, but an illustrative, list. Yet consider their scope and operation. The Law Member stated recently in the Assembly that Government would decide the question (in question) when they decide to decide; the Home Member cannot give information on several points because he does not read not only the *Modern Review* but the morning daily papers including the Delhi *Statesman*. Government members are unfortunately "not aware" of several things of common knowledge, because they have to be officially ignorant of inconvenient facts and in almost all important cases, they are perpetually "considering the question." In several questions the public interest is so vital that it is not in "public interest" to reply to them. In the last resort they "ask for notice". This finishes the interpellations, unless they are already stopped by the President passing on to the next question.

Resolutions are recommendatory and not binding. Government Benches, as Sir N. N. Sircar has declared, continued, even after the verdict of the House, to hold their own opinion on issues on which they are defeated of course, according to their own conscience (which, in turn, is governed by the rate of pay). If Officials in the Assembly vote and speak according to conscience, Shakespeare was a prophet when he said "conscience doth make cowards of us all"! Non-official bills seldom reach the Statute-Book and can ultimately be voted; motions of adjournment when not ruled out are often enough talked out; cuts in budget can be automatically restored; and if official legislation or taxation proposals are rejected, they can be certified; and if its constructive potentialities are explored, ministerships are the best professions to get out of. Nothing remains, I am afraid, but interruptions and interjections; and even they can be sternly put down.

But it is doubtful if even some types of constitutional agitation are also not fraught with risks. For instance, the rejection of the Indo-Burma Trade Pact by the Assembly, although strictly constitutional, was highly dangerous as it antagonised Lancashire and Parliament. If even now the J. P. C. Report had been accepted as a token of goodwill, the Secretary of State would have moved amendments (as he is obligingly doing) for the Princes to liberalise the Constitution. Constitutional agitation is the strongest safeguard against safeguards; the Mody-Lees Pact, for example, has prevented the restriction on powers of future legislature to deal with British imports as will be evident from Clause 12 (f) of the Government of India Bill. Constitutional agitation should, therefore, have that precise intensity which can successfully convince the powers-that-be without acually antagonising them.

Outside the legislatures, people can ventilate their grievances and demands through a variety of sources, *e.g.*:—

(*i*) Angry letters to newspapers and powerful leading articles.
(*ii*) Strong speeches and mild resolutions at public meetings.
(*iii*) Frequent statements and elaborate interviews in the Press.
(*iv*) Processions with black, red or white flags and demonstrations (with the safeguard of *lathis* under the "individual judgment" of the police).
(*v*) Picketting, leaflets, pamphlets and even books.

But such methods do not seem to impress the bureaucracy. Letters to the press or pamphlets, it feels, are usually written by aggrieved persons themselves and can be discounted as biassed; leading articles are written by professional journalists whose criticisms are taken as matter of course and whose indignation is a routine affair. Moreover, all such newspaper agitation is carried on mainly as a "Press stunt" to increase circulation or earn *cheap* popularity (popularity of Government being very dear having been bought with taxes *plus* sucharges); such agitation is usually the work of some vested interest or of self-advertisers and publicity-seekers. For all these reasons, press agitation need not be taken seriously.

As regards meetings, it is well-known that they are usually organised by "professional agitators" who have an axe to grind, who want to "exploit" public feelings and create imaginary grievances where none exist. The discontent of these agitators becomes itself a constitutional habit, the agitation becomes chronic and its methods mechanical. Processions, demonstrations or picketting need not, of course be taken into account. They merely take advantage of "mob psychology" and "crowd hysteria" and not infrequently lead to riots and violence thereby becoming unconstitutional. There is only one step from the constitutional to the revolutionary: there is always the lurking danger of unconstitutionally conducted constitutional agitations.

In short, a strong government must for its very existence and prestige always ignore such defiant methods or capitulate; but if the agitation is mild, it is, of course, not worth any attention at all. Either the people resort to threats and pressure to which no Government can yield with any honesty or dignity; or there is no agitation which shows that the people are satisfied with their lot and silence implies consent.

It will be perceived that this dilemma explains most of the action (and inaction) of our Government. When there are no loud protests against a measure or action, it is apparent that there is no public feeling at all on the question. Thus, for instance, when the salt tax was imposed in 1923, Sir Basil Blackett triumphantly declared in the Assembly that, though Government had been threatened with all sorts of dire consequences and a revolution had been forecasted, nothing had happened. Or when Gandhiji was imprisoned in 1922, the Governor of Bombay politely observed that not a dog barked: a considerable improvement on the position in 1932 when dogs *did* bark even if the caravan passed on. On the other hand, if there are some protests, the agitation is very mild, it causes no trouble or inconvenience and is due to a "microscopic minority" and stray individuals and small groups consisting of "cranks" or "fanatics" or "impatient idealists" and "impracticable visionaries" who deserve no serious attention.

GREAT BRITAIN

TRADE RETURNS FOR FEBRUARY

With ominous rumblings in the air, reports from the island empire have assumed the importance of despatches. One naturally wishes to begin with the international situation. But there is always such a veneer of politeness and diplomacy on the utterances of statesmen with regard to foreign affairs, that it is not always easy to specify the intentions of nations. The brutal frankness of Germany in this regard is a welcome change. Diplomacy may require that the Chancellor should develop a cold on a stifling day in March ; but when it comes to shocking the pacifist susceptibilities of European statemen, Germany does it with the thoroughness of an artist.

In one sense, it is a good thing that the bubble of peace has burst. The conviction is borne in upon one that there never was any substance behind the hollow professions of peace with which statesmen sprinkled their orations at Geneva. Nations extend mailed fists to one another and call it a handshake. Indeed, the Treaty of Versailles perpetuated not peace but war ; for across the whole parchment was writ large distrust and jealousy and the gloating of the victor over the vanquished. It was evident before the ink had dried on the paper that Germany was swallowing the bitter pill because she had to, and that she would repudiate the treaty on the first conceivable opportunity. A more generous gesture in 1918 might have laid the foundations of a more lasting peace. Hardly two decades have passed since the world received its baptism of blood ; and already the Chancellories of Europe are buzzing with talks of another war. One awaits with almost bated breath the development of events ; and the next few days will show whether the Simon-Hitler parley is a meeting of friends or a conference of opposing generals on the eve of battle.

Someone remarked to me the other day, with rather grim witticism, that the National Government will probably, after all, succeed in solving the problem of unemployment. For there is no doubt that employment is greatly stimulated in an atmosphere of war. Apart from active service, the armament factories absorb a vast number of the idle gentry. It would really be a strange finale for the National Government if, after all their loud professions of peace and disarmament talks, they succeed in finding work for the country's workless millions only in the trenches or the munitions factories.

It is almost significant that unemployment figures are already showing signs of improvement. The returns for February issued by the Ministry of Labour show that the numbers of unemployed declined by 39,910 compared with the end of January and by 32,446 compared with this time last year.

At February 25, the numbers of unemployed persons on the registers of employment exchanges in Great Britain were 1,840,136 wholly unemployed, 353,548 temporarily stopped, and 91,779 normally in casual employment, making a total of 2,285,463, compared with 2,325,373 at January 28, 1935, and 2,317,909 last year. The total on February 25, 1935, comprised 1,802,247 men, 71,980 boys, 346,730 women, and 64,506 girls. It is estimated that at February 25, 1935, there were approximately 10,081,000 insured persons aged 16-64 in employment in Great Britain. This was 28,000 more than a month before, and 136,000 more than a year before. There was a considerable improvement, between January 28 and February 25, in employment in the building (−29,508), tailoring (−6,234), and boot and shoe industries (−3,039), and some improvement was also recorded in public works contracting, in the woollen and worsted industry, and in shipping service. The most conspicuous setback was recorded in the coal industry in which unemployment increased by 24,274 mainly in the Yorkshire and South Wales mines. The prospects of England's coal industry still seem to be as dark as ever.

In view of the uncertainties prevailing, the trade returns for February issued by the Board of Trade make a hopeful showing. The setback in the export trade recorded in January has been checked ; and although still well below the pre-depression figures, the exports are settling down at a higher level than was thought possible at the beginning of 1934. It should also be remembered that the period reviewed contained only 24 working days as against 27 in January. Exports totalled £34,098,000, compared with £35,481,000 in January and £30,060,000 in February, 1934. Imports amounted to £56,302,000, compared with £61,931,000 in January and £57,364,000 in February, 1934. Re-exports were only £4,408,000, compared with £5,034,000 in January and £5,210,000 a year ago. The declines compared with January are explained amply by the fact that there were twenty-four working days both this February and last, and twenty-seven in January.

The chief factor that accounts for the improvement on the exports side is manufactured goods. There was a big drop in the exports of food, drink and tobacco ; and raw material exports were maintained practically at the January level.

Imports are maintained despite an expectation of a drop on seasonal grounds. The most conspicuous drop was in the imports of raw materials. The hope that the growing increase in imports of raw materials a year ago was a sign of increasing purchasing power and hence of industrial recovery seems to have been hardly justified.

In the matter of iron and steel production also February proved to be a happy month. There was a substantial increase in steel production in February despite it being a short month. Compared with February last year, steel production last month showed an increase of 62,000 tons and pig-iron an increase of 68,700 tons. The total pig-iron output for February was 483,100 tons, against 521,200 tons in January and 414,400 tons in February last year. The daily rate of production showed an increase from 16,813 tons in January to 17,254 tons in February. The month's production included 111,400 tons of hematite, 255,500 tons of basic, 100,000 tons of foundry and 8,400 tons of forge pig-iron. The output of steel ingots and castings totalled 769,500 tons, compared with 757,800 tons in January and 707,500 tons in February, 1934.

Outwardly, therefore, there are no signs of alarm, much less of panic. But an intelligent survey of the market reveals a nervousness which can only be explained on the ground of a premonition of coming events. The market has, it is true, come in for a few severe shocks recently. The pepper gamble in itself was a major event. But the steady fall in sterling, the steady flight of capital to the Continent, the decline in the price of giltedge, have all a little more than ordinary significance. It is significant, for instance, that factors which under normal circumstances would be considered as strong bull points, fail to lend tone to a sagging market. Industrials, for instance, failed to respond to the benefits of a falling pound and 'heavy' industry shares did not soar in spite of the promise of increased armaments expenditure. Several good industrial reports left the market cold and unresponsive. One can almost discern the fateful lull before a storm.

STRENGTH AND PRECISION

Throwing the hammer stands for a combination of strength and precision which illustrates our business. We too are "casting", but in a different sense.

We have won a name for ourselves through turning out consistently good iron castings, both in exactitude to specification and in excellence of quality. In placing orders with us you can be sure of fine workmanship and of prompt service to go with it.

Light and heavy castings of every kind.

U. S. A.

BREAK IN COTTON PRICES

The week has afforded yet more instances alike of the President's difficulties and his courage. The list of the Federal District Courts' decisions against the N. R. A. is lengthening week by week. In the wake of the decisions regarding the Public Works Department, the Tennessee Valley Authority, the Agricultural Adjustment Administration etc., comes the decision of Justice Fake at Newark, New Jersey, granting the Acme Steel Company an injunction to restrain the Government from insisting on the observance of the fabricated metal code. It was only recently that a similar injunction had been granted in the case of the Weirton Steel Company and 38 Kentucky coal companies. The Administration would not tamely acquiesce in these decisions and they will surely endeavour to get the verdict of the District Courts annulled by the Supreme Court. But the number of such adverse injunctions is so large, that the authorities might well feel nervous whether on the legal side the N.R.A. will not be faced with insuperable obstacles.

At the moment Mr. Roosevelt would seem to be enjoying his triumph on the question of the gold clause. In a conference of press representatives, the President is reported to have said that he did not think that there was need for new legislation as a result of the Court's gold clause decision. Mr. Roosevelt added, however, that the whole question is still under review by Government experts. It will be obvious to those, who are acquainted with the findings of the Supreme Court, that they hardly give rise to any need for legislative or executive action. The Government are not exposed to any claim for full payment on the bonds carrying the gold clause. It may, therefore, be surmised that what is engaging the attention of the Government at present is the means by which the gold clause question may be put an end to, once and for all. It would be certainly wise to effect conversion of such bonds, in which case the contracts embodied in those bonds would be terminated and the holders of such bonds would not have any occasion to drag the Administration into the courts. If conversions are to be effected in the present state of the money market, and at present levels of interest rates, they would yield a handsome saving for the Exchequer. The double advantage of putting an end to the vexed question of the gold clause and making a saving for the Treasury has, presumably, induced the authorities to examine the chances of effecting such conversion. There were rumours during the week that the Government will call the outstanding First Liberty Loan amounting to nearly 2,000 million dollars shortly, and refund it at a lower rate of interest, probably 3 per cent. This, it is calculated, would cause a saving of 14 million dollars annually, besides eliminating the gold clause bonds altogether.

Even more serious than the decision of the District Court, alike in its content and its consequences, is the sharp and unexpected break in prices on the cotton exchange on Monday, March 11. The spot prices slumped by 175 points. Although there was a rally at the close, the final quotation at 11.30 at the end of the day was 100 points lower on balance. A variety of causes have operated towards this breakdown of cotton prices. The immediate cause is, however, the general belief that the Government intend to abandon their scheme of loans to cotton farmers. Foreigners have been taken in by such rumours more than even the nationals; and the liquidation set afoot by them was one of the principal factors working for low prices. Officials in Washington have lost no time in denying the truth of these reports. Senator Bankhead quickly removed the misapprehension that the changes, which he is contemplating in regard to his Bill, are calculated to increase the production of cotton within the country. He assured the public that none of his amendments would have the effect of increasing the new crop above 10,500,000 bales. Though the rumours regarding the intention of either the Government or Senator Bankhead have provided the immediate cause for the slump, there are in the general situation a number of potent reasons why American cotton cannot increase in price. The agricultural export indices for January, which were published by the Director of Agriculture during the week, contained a strong hint that the position in the cotton industry is fundamentally unsound. For one thing, the cotton index figure is 68 and is the lowest figure in any month since 1923; and this compares also with 109 a year ago. There is every sign that America is gradually losing her dominant position in the world cotton markets. The figures, which have been published by the International Cotton Federation, confirm what is a matter of ordinary knowledge in the markets, that the world consumption of American cotton has been diminishing and that at its expense Indian, Egyptian and the Miscellaneous growths have gained very considerably.

The total world consumption of all kinds of cotton in the half-year ended January last amounted to 12,207,000 bales as compared with 11,787,000 bales for the same period ended January 1934. While the total consumption thus shows an increase of 420,000 bales, the consumption of American cotton has declined from 6,479,000 bales to 5,541,000 bales. East Indian Cotton has increased from 2,282,000 bales to 2,887,000 bales, Egyptian has advanced from 481, 000 bales to 520,000 bales. The corresponding figures in the case of sundries is 2,545,000 bales and 3,349,000 bales. That is, while the East Indians, Egyptians and sundries show an increase during the half-year of 605,000 bales 481,000 bales and 804,000 bales respectively, the Americans have suffered a drop of 1,028,000 bales. Taking the case of Great Britain the consumption of American cotton in the last half-year was 533,000 bales as compared with 690,000 bales in the previous six months and 771,000 bales for the half-year ended January 31, 1934. The consumption of East Indian Cotton in Great Britain was 170,000 bales as compared with 175,000 bales in the previous six months and 109,000 bales for the half-year ended January 1934. The changes referred to above are due not only to the prices of the American but also to the agreements that have been arrived at between the Government of India and the governments of cotton-consuming countries like Great Britain and Japan. The British Government have exhorted Lancashire to increase its consumption of Indians. Japan is under agreement with India to take a specified minimum of cotton every year. While India has thus, to some extent, secured the export markets for her cotton, America has rendered the position of her product increasingly difficult in the foreign markets. By making loans to farmers at 12 cents per lb. of cotton, it has virtually pegged the price at that level, and it is not to be expected that foreigners will continue to take American cotton in the same quantities as formerly. The Brazilian and South American producers have taken good advantage of the dearness of American cotton to increase their share of foreign consumption. These difficulties which have been gathering over a period have now burst in the form of a sharp slump.

From the statement of Senator Bankhead referred to earlier, it would appear that the developments in the cotton market are far from likely to deter the Administration from continuing their policy of making loans to the cultivators. Loans to farmers have apparently been dictated by the general economic policy rather than by a consideration of what may be called the economic price of American

Air Mail Week

cotton. The Administration believe that, unless the general purchasing power in the country is maintained, the Recovery Administration would be doomed to failure. But it has now become necessary to devote attention to the prices of American cotton and the volume of its sale in foreign countries. While formerly the Administration thought that the maintenance of cotton prices would not be a difficult matter, the developments of the last half-year and more must show them clearly that far more would have to be done before the Government can rely on the prosperity of the farmers or the security of the Government's advances. There is reason to believe that the Government's mind is turning more and more to the possibility of an agreement among the chief producers of cotton to restrict output and divide the markets. At any rate, there can be no room for doubt that the loans to American farmers will, far from ensuring the stability of cotton prices at that level, actually cause a serious decline.

As mentioned at the beginning of this article the difficulties of the New Deal have not deterred the President from prosecuting vigorously the measures in which he is able to command faith. One would have thought that the adverse decision of the Federal Court on the question of the power of the Tennessee Valley Authority to generate and sell power would have damped the ardour of Mr. Roosevelt. But the President has actually forwarded another message to Congress, in which he renews his demand that public holding companies shall be dissolved after five years unless they are able to justify themselves. The campaign of the utility holding companies is one of the few measures of the New Deal for which President Roosevelt may claim full personal responsibility. Throughout the course of his public life Mr. Roosevelt has been impressed by the extent to which the public utility companies exploit their monopolistic position and the sad neglect of potentialities. The structure of these holding companies is such that they may be well described as financial empires with all the extravagance and irresponsibility which that term signifies. The message has been necessitated by the loud protests of the companies concerned, who have exploited the circumstance that trust funds are to a large extent invested in these utilities. Mr. Roosevelt denounces these protests as mere propaganda. He states that the proposed measure "will not destroy legitimate business or wholesome or productive investments. On the contrary, it will surround the necessary reorganisation of a holding company with safeguards which will protect investors."

While the President has thus reinforced his threat to the holding companies he had also afforded some comfort by the concession that the Government should "offer a chance of survival to those holding companies which can prove to the Securities and Exchange Commission that their existence is necessary for the achievement of the public ends which private companies are supposed to serve."

This is not only a comfort to the companies but a valuable statement of policy.

GERMANY

DR. SCHACHT AT LEIPZIG FAIR

Dr. Schacht has become such an important figure in the Nazi Germany and his views on current economic problems of Germany are so widely known that whenever he makes a speech, it is clearly necessary for a correspondent to outline the points emphasised by him. The Leipzig Fair speech delivered last week is on the lines of thought which we have come to associate with Dr. Schacht. The speech is notable, if only for the authoritative statement of the demands of the nation and a reiteration of the handicaps that Germany is suffering from. The two important questions which Dr. Schacht is never tired of discussing at every suitable opportunity, are the problem of foreign indebtedness and the question of clearing Agreements. The solution of the transfer problem would only be possible either by reducing interest and amortisation payments on Germany's foreign loans in connection with a temporary postponement or by an adequate export surplus. He expressed satisfaction that Mr. Grady, Chief of the Treaty Department of the U. S. Administration, has understood this alternative and recommended a compromise—that Germany's debt service be suspended for some years, to be resumed later at a moderate rate of interest. Such a period of moratorium will be utilised by Germany to construct normal international trade, and the interest accumulated in the meantime will be added to the amount of loans.

Dr. Schacht was particularly severe in condemning the clearing Agreements with creditor countries. These agreements were characterised by him "as dealing a blow to the world trade." These constituted the principal handicaps to the successful working of the 'new plan' and consequently proved unsuitable for the solution of Germany's transfer problem. The figures of export and import trade will illustrate his point more clearly. With the exception of March, October and November, all the months of 1934, show-

Air Mail Week

ed an adverse balance of trade. For the complete year the total imports amounted to 4,451 million Reichsmarks as compared to 4,204 million reichsmarks in 1933. Total exports during the year fell to 4,187 million Rms. from 4,871 million Rms. in 1933. Thus from an active balance of 668 million Rms. in 1933, Germany is now faced with a passive balance of 284 million Rms.

During 1934, Germany had concluded many bilateral agreements, with a number of creditor countries, under which the proceeds of any surplus of imports from Germany were specifically allotted to Germany's creditors in the other country. Clearing agreements were concluded with Holland, Switzerland Belgium, France and Sweden providing for payments of imports to be offset by payments for exports. At the time of concluding these agreements, Germany was enjoying a favourable trade balance, and the creditor countries thought that they had now come to the solution of the problem of indebtedness. The subsequent events unfortunately proved otherwise. Without keeping the exports at the same level the Agreements have actually encouraged imports. The following table shows the trends of trade with the various countries with which Agreements are in force:—

GERMANY'S FOREIGN TRADE.

	German Exports.		German Imports.	
	1933	1934	1933	1934.
	(in million Reichsmarks)

As if to add strength to Dr. Schacht's arguments, the trade balance with the United Kingdom and the United States, with which there are no clearing agreements, show uniformity both in exports and imports. Against the rise in Germany's imports from the principal clearing countries, there has been a fall in her purchase from the non-clearing countries. The Anglo-German Payments Agreement has, in comparison with the clearing agreements, turned out well, though there were some difficulties in the beginning. To remedy the situation that has thus developed, the only way open to Dr. Schacht is to restrict the issue of import licenses especially when imports are to be from the clearing countries. The exchange certificates will be more closely scrutinised in future.

But to the foreign creditors, Dr. Schacht's arguments never appeal. For Germany's dwindling trade, it is not the clearing agreements that are responsible. It is the peculiarly political-cum-economic creed of the Nazi State which insists on maintaining in equilibrium the two incompatible economic factors of a high internal cost level due to the employment creation programme and the export surplus—that is to be blamed. To obtain more goods from Germany at higher cost than elsewhere is what it amounts to, as far as the creditors are concerned. The fact remains that the interests of debtors and creditors rarely, if ever, coincide, even if questions of economics alone are involved. But if political prejudice is also thrown in, nothing more is needed to keep the parties permanently apart.

CHINA

THE CRISIS AND THE WAY-OUT

The evil effects on China of President Roosevelt's silver purchase policy are now a matter of common knowledge. The high price of silver, the speedy depletion of China's hoards of silver, the progressive fall in her export trade and the futility of the embargo have all been outlined in the columns on a previous occasion. The advent of the New year with the heavy demand for silver had increased the strain; and the stocks of silver in Shanghai, the one important monetary centre, have fallen from 583 million dollars in June 1934 to 315 million dollars in January 1935. A monetary crisis was imminent; but now it appears the crisis is postponed for the present. The Chinese New Year having passed, the situation is, for the moment, easier. Silver has also come to be stabilised round about 24½d. Lately, however there are again signs of silver price rising; much to the embarassment of the Chinese authorities.

If China is to be saved from a monetary crisis, only two remedies are possible—one internal and the other external. She can adopt a gold standard as recommended by the Kemmerer Report of 1929, which provided for the introduction of a uniform gold currency system for the whole country, and the general adoption of the customs gold unit alongside the existing silver currency for internal use. Considering the

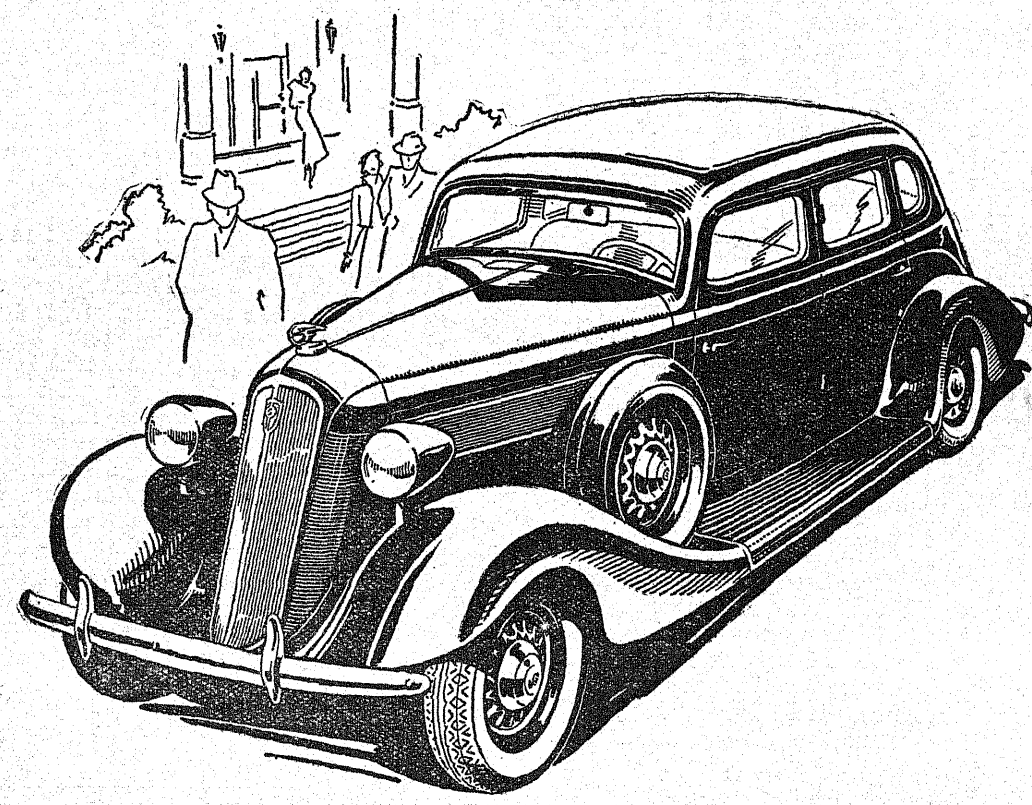
ANNOUNCING THE NEW 1935

STUDEBAKER CHAMPIONS



World's first cars with new independent front wheel suspension which ensures the most restful rear and front seat ride — regardless of size — that motoring has ever known . . .

MAKE US PROVE IT!

World's easiest handling, most obedient, surest-footed cars . . . scientifically steadied against drifting and side slip, even when rounding difficult corners at high speeds . . .

MAKE US PROVE IT!

World's safest, swiftest, straight-line stopping . . . the result of new compound hydraulic brakes of special design which are unexcelled by any car regardless of price . . .

MAKE US PROVE IT!

IN THESE 1935 Champions, Studebaker introduces motoring's most restful rear and front seat ride. We invite you to experience the comfort miracle of Studebaker's new independent front wheel suspension and automatic shock absorption.

Just as amazing is the remarkable handling ease of these new Studebakers. No other cars, regardless of price, respond so obediently. No other cars are so surefooted, whether on straightaway or turn.

And they stop smoothly, swiftly, surely, with compound hydraulic brakes that have been engineered into each chassis to make Studebaker's miracle ride complete. Bodies are roomier—sedan front seats accommodate three passengers — and fashioned of steel-reinforced-by-steel for maximum safety and comfort.

You'll see nothing smarter than the new skyway silhouette of these Champions. Slender, radiators, new bonnet louvres, gull's wing mudguards, sloping windscreens, air-curved tops and rear decks give them a grace of line that many proclaim the smartest effect ever obtained in automobile architecture.

Studebaker has overlooked nothing in making these new 1935 cars the stand-out values of the automobile world—and they cost but little more than the lowest price cars. Why not arrange for a convincing trial drive today in a New Miracle Ride Studebaker Champion?

G. McKENZIE & CO. (1919), LTD.

208, LOWER CIRCULAR ROAD : : : : CALCUTTA.

present state of recovery in the gold bloc countries on the Continent, the adoption of a gold standard does not appear to be free from risks.

Pending the thorough examination of the whole situation by the new committee appointed for the purpose, China's immediate line of action would appear to lie in easing the banking crisis. China is considering the question of postponing these debt obligations, and Chinese banks, who are by far the largest holders of these bonds, will not be averse to this lengthening of the process of liquidating the debts.

External assistance to China, at this hour of need, brings to the fore the wider question of political issues embracing the whole Pacific question. Taking advantage of the internal situation, Japan is reviving the question of Sino-Japanese relations. Japan has everything to gain by an alliance with China.

Lord Lothian's letter to *The Times*, a few weeks back, may perhaps be significant of how the Western Continent feels over this question. Says Lord Lothian, "It is quite clear that Japan has already set to work to nullify the political basis of the Washington Treaties, namely, the integrity of China, equality of opportunity of trade of all nations in China and the principle that these questions are the collective concern of the signatories of the Nine Power Treaty. I do not think it is open to doubt that Japan hopes to face the world with a *fait accompli* in China analagous to that which she accomplished in Manchukuo."

The alternative to change in currency or economic entente with Japan is, perhaps, an international loan or bank credit which would serve to straighten out affairs in China. As one correspondent points out, the amount of the loan, too, need not necessarily be large; for judging from the total note issue which is only 407 million dollars, the question, though of immense importance, admits of early grappling. It may even be that with return of confidence in the currency which the flotation of the international loan might bring about, the actual utilisation of the amount may be unecessary. But the loan will be valuable to China in that she will be able to tide over the budget deficits for the present, and thus gain some breathing time to see how the currency problems can be tackled.

(*Continued from page 1103*)

monsense in a country like Britain. What the champions of the consumer often forget is that imports represent but one side of the exchange. The other side will have to be represented by some value. And economic values are created only by strenuous productive activity. It is not as if the Siamese and the Indo-Chinese are overflowing with pity for the poor workers and the starving millions of India and would have them share with themselves the bounties of nature in their own country. If for any reason South India omits to produce rice—and no one will produce, if production is not profitable—then India will have nothing to export abroad but the bones of teeming millions which will ere long be bleached dry. For who can deny that if we can't produce rice at competitive prices, we can produce nothing at all lies. It may be that the real or fundamental economic problem of this country his elsewhere than in import duties or export markets. It may be that other nations have sped so fast in productive efficiency that we are left miles behind in the race. But these circumstances cannot form a case for continuously imperilling the our staples.

(*Continued from page 1107*)

But if there *are* strong protests and loud demands, from all quarters, well then the thing is plain: the agitation is "trumped up" and "artificial" and there is "organised propaganda" which is due either to prejudice or interest or ignorance and should, therefore, be completely ignored. For instance, if there were vociferous protests against sugar excise duty or Ottawa or measures for steel protection last year, it was obvious that there was "lobbying" by interested parties, "manufactured" messages from commercial bodies and "inspired" leading articles in the press. If opinions of public bodies and the press are unanimous, they betray a common authorship: if they are divergent, they show wide differences in public views and in either case cannot be considered. It appears the executive have a horror of any agitation which is "manufactured" or "artificial"; they only believe in absolutely spontaneous and natural agitation; but spontaneity may also be due to impulse and ignorance and lack of foresight and to be natural is to be barbarous. Constitutional agitations must consequently be neither manufactured nor sudden, neither strong nor mild, neither artificial nor natural.

Fortunately, not in all cases do Government wait for constitutional agitation to take action. In several important matters, their action itself is spontaneous. There was no agitation for the Lee concessions to the Services or for restoration in their salary cuts; no public demand for gold exports or statutory railway authority; no "whirlwind campaign" for ordinance and emergency legislation; not even a "raging and tearing" propaganda for additional taxation and surcharge on income-tax. On the contrary, constitutional agitation opposed these measures and policies but Government rightly ignored such agitations in the wider interest of the country and its compulsory partnership with Britain.

But, perhaps, this analysis is on wrong lines. Perhaps we call a constitution what is really an institution. And we have not yet devised means of institutional agitation.

JUTE AND JUTE GOODS

JUTE

Calcutta, March 28.

Since reporting last week steady conditions have prevailed in the raw jute market. The highest and the lowest quotations for June delivery were Rs. 34-12 and Rs. 32-12 respectively. The rise in the market has been due to want of rain in the jute growing areas and also due to paucity of contracts. There was heavy bear covering for March settlement as some of the holders have chosen to take actual delivery of goods in the East India Jute Association, rather than buy June at a premium of Rs. 2-6.

During the early part of the week, business in Ready Firsts was done at Rs. 21 and for end of April at Rs. 32. Towards the close in sympathy with firmer futures market sellers are asking Rs. 32 for Ready Firsts. Shippers business in Tossa 2-3 was done at Rs. 29-4 and in Reds at Rs. 35-8 and Daisce at Rs. 26. On the whole the offerings are poor.

Towards the close favourable weather conditions are reported and consequently heavy sales in futures are reported to have taken place from a big operator between Rs. 34 and Rs. 34-12. At the moment bull position is again fully created as bears have almost covered their blank sales. Not much support is in evidence from the outside market and this is a cause for interest weakness. Jute by itself is fully steady but unless the weather conditions remain unfavourable and outside support is not forthcoming a decline by a rupee or so will not be unexpected.

Imports in Calcutta up to the middle of the week have been over 78 lakhs bales or a figure equal to the estimated crop for 1934-35. Stocks locally are fairly heavy though the stocks in the moffussil markets are reported to be very small. Exports for the same period in the current season are only 31.5 lakhs or about 2.5 lakhs less than last year. Purchases by mills are also heavy being estimated over 42 lakhs bales against 35 lakhs a year ago. Statistically the position is not very healthy but anticipating a reduction in new seasons sowing by 311 per cent. the present price is in no way higher. The future trend of the market however remains very uncertain pending the actual sowing results during the following months.

JUTE MANUFACTURES

Calcutta, March 28.

Hessians market has ruled steady but purely in sympathy with the rise in the raw jute. By itself there is little doing in this market. There has been only small business for near cover in 40×10 at Rs. 10-11 and 7½ oz. at Rs. 9-11-6. There is small speculative interest in the market following the weaker cotton in New York and Bombay.

Heavy goods market is also firm in sympathy with hessians and sellers are reserved. Plain Heavy Cees for April were done at Rs. 24-12 and B. Twills for the same month at Rs. 25-12. Liverpool Twills are reported done at Rs. 28 for immediate shipment.

The tendency of the market at the moment seem to remain narrow because the trade buying does not seem to be pointing to any higher prices. At the same time the smallness of stock and that too being in the hands of strong holders does not allow the price to fall below Rs. 9.

Total reported sales for the week ending Saturday, the 16th March, 1935.

COTTON AND COTTON GOODS

COTTON

Calcutta, March 28.

There was a steep decline in cotton during the early part of the week when Broach April-May fell down to Rs. 2-4. Later however, there has been a fair selling recovery to Rs. 229, the closing being about Rs. 220. The decline was due to uncertain financial conditions in Europe and weaker New York advices. The tendency of the market is for narrow trading and the right course to follow for sometime to come is to buy at every decline and sell at every rise.

The latest quotations for Broach April-May were Rs. 220 and May-August Rs. 229. Oomra May Rs. 197 and Bengal May Rs. 129.

BULLION

GOLD

Calcutta, March 28.

After ruling steady during the early part of the week the gold market towards the close has ruled a shade easier and prices have come down from Rs. 36-6 to Rs. 35-15. London prices have likewise gone down from 147s. to 145s. per ounce. The tendency of the market is however quiet but steady.

The exports of gold from U. K. during the week ended March 23, totalled £2,936,000 of which £2,436,000 was shipped to France. The imports of gold into U.K. during the same week amounted to £3,330,000 of which £525,000 worth came from Africa, £1,510,000 worth from France and £970,000 worth from Switzerland.

LONDON—Air Mail Week.

The Bank of England gold reserve against notes amounted to £192,520,583 on the 6th instant as compared with £192,498,539 on the previous Wednesday.

There was considerable activity in the open market, the total available at fixing during the week being about £2,200,000. Prices, as usual, were based on supply and demand and there was a keen general enquiry for the amounts offered.

SILVER

Calcutta, March 28.

There was a very sharp rise in the price of silver during the middle of the week London at one time rising to 29⅛d. and Bombay a little below Rs. 76. The rise was due to speculators buying and sellers holding back. The advance was rather overdone and profit takers were not wanting to unload heavy lots at the rise. Consequently there was a sharp fall towards the close London quoting 28⅜d. and Calcutta Rs. 74-8. This market also seems to remain narrow unless something new creeps in.

The main cause of the market being suddenly galvanised into life was the passing by the Senate of the 4,880 million dollar Work Relief Bill in America. The Scheme includes the proposal put forward by Senator Thomas for the expansion of currency by 375 million dollars. It is not certain whether the joint conference of both houses will uphold Mr. Thomas' plea. But for the moment all metal exchanges except the conservative exchange at Shanghai are reflecting the expected boom in the silver market. At any rate it is fairly certain that America will continue for some time to buy silver at higher prices to provide for the 1,100,000,000 ozs. necessary for bimetallism according to the American Silver purchase Act of 1934—unless a subtle change comes over U. S. A. politics in the future.

London Air Mail week:

Although there were sharp fluctuations during the past week the tone was generally firm. China and the Indian Bazaars have been active and demand from these quarters on a poorly supplied market caused a rise of 7/16d. in both the cash and two months quotations on the 7th instant, when prices for the respective deliveries were 27.1/4d. and 27.3/8d. This level, however, brought re-selling from both India and China and there was a set-back in consequence, but with renewed speculative demand and good support from America, prices more than recovered, reaching 27.5/16d. and 27.7/16d. on March 13.

The market may see temporary reactions, but the undertone remains good notwithstanding the somewhat rapid advance recently made.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 4th instant to mid-day on the 11th instant:—

Imports

	£
British India	124,553
Australia	64,758

TEA

Calcutta, March 28.

There were no public sales of tea during the week under review. A small quantity of tea arrived immediately after the sale No. 36 and was disposed of privately for internal consumption at firm rates.

Java Tea

At the London auction on March 21, 8,300 packages of Java and other teas (including Sumatra) were submitted for sale.

Demand to-day for the offerings was queter. Tippys sold readily, but other descriptions were irregular.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 7¾d., to-day's auction 7½d. lb.; Common Broken Pekoe last action 7¾d., to-day's auction 7¼d. lb.; Common Orange Pekoe last auction 9d., today's auction 9d. lb.; Common Broken Orange Pekoe last auction 7¾d., to-day's auction 7¾d. lb.; Common Broken Pekoe Souchong last auction 8¼d., to-day's auction 8d. lb.

The following were the value prices:—

Clean Common Pekoe last auction 8½d., to-day's auction 8¾d. lb.; Clean Common Broken Pekoe last auction 8d., to-day's auction 7¾d. lb.; Clean Common Orrange Pekoe last auction 9¼d., to-day's auction 9½d. lb.; Clean Common Broken Orange Pekoe last auction 8¼d., to-day's auction 8⅜d. lb.; Clean Common Broken Pekoe Souchong last auction 8¼d., to-day's auction 8d. lb.

Ceylon

At the London auctions on March 26, 18,400 packages of Ceylon tea were submitted for sale. There was a fair demand for the offerings, with commons and mediums about steady.

The following were the lowest prices fetched during the day's auction:—

	Last auction lb.	To-day's auction lb.
Common Pekoe ...	10½d.	10½d.
Common Broken Pekoe ...	10½d.	10½d.
Common Orange Pekoe ...	10¾d.	11d.

SUGAR

Calcutta, March 28.

Messrs. Bird & Co. in their bulletin dated March 23, report as follows:—

Prices for Java white at importing centres closed as under:—

PRICE

	Ready	Forward
Calcutta	9 7 0	9 8 0
Bombay	9 11 0	9 12 0
Jamnagar	9 4 0	9 5 0
Bhavnagar	9 4 6	9 5 0
Karachi	9 10 0	9 11 0

Calcutta.

The Java Sugar market continued to remain dull during the early part of the week, which was mainly due to holidays on account of the Holi festival. During the latter part of the week however stock holders endeavoured to liquidate at reduced prices with the result that some enquiry was noticeable although the offtake remained very disappointing. Retailers appear to be taking full advantage of this state of affairs by adopting a hand to mouth policy so as to avoid any risk of fluctuation in market values.

Local dealers are unable to feel any confidence in the existing parity between the prices for indigenous and Java sugar continuing and are, therefore, watching further developments with regard to the policy of Indian manufacturers.

As regards Indian sugars, stock holders are still firm in their determination not to liquidate at reduced prices and as demand has improved slightly it is anticipated that they may enter the market for large quantities in an endeavour to corner stocks at slighty better prices than are possible today. No fresh forward business is reported to have taken place during the week.

Bombay.

The market for Java white sugar in Bombay continued to remain dull and depressed as reported last week and prices registered a further decline of about 1½d per cwt. for ready as well as forward positions. Heavy arrivals of Indian sugars continued while the pressure of sales by outsiders for February/March shipments has had an adverse effect on values. The demand from consuming centres is still very unsatisfactory and unless this shows an improvement no change for the better is likely to take place.

It is, however, reported that there was some buying activity for Malabar coast ports at reduced rates owing to the increased disparity between Java and local prices. Another feature of interest was the rebuying activity displayed by a few importers for May shipments at current rates for diversion to other West coast ports. No business was possible for British Refined or other continental sugars due to quotations being far higher than the ruling rates for Java.

As regards Indian sugars, conditions remained the same as reported last week and the continued heavy arrivals have further depressed the market by about two annas per md. Arrivals are estimated at 1,200 tons and inclusive of these stocks are about 5,500 tons. It is anticipated that prices may decline further on account of the heavy stock position unless there is an improvement in demand.

Jamnagar and Bhavnagar

The heavy stock position in Jamnagar market has been responsible for prices depreciating further and importers, although willing to liquidate at below cost, have remained unsuccessful due to the lack of buying interest. Consuming centres are reported to be heavily stocked and, therefore, no activity is likely to take place until such time as these stocks have entered consumption.

The previous huge stocks of 175,000 bags were further increased by the addition of 13,000 bags per *S. S. 'LYALLE PARK'* and although a quantity of some 8,000 bags is reported to have been railed up-country, the present

stock of 180,000 bags is considered embarrasing. Not only is all godown accommodation fully occupied but a large quantity of sugar is reported to have been stored in the open pending clearance.

The stock position in Bhavnagar is also becoming embarrasing and is estimated at 130,000 bags and unless the present offtake which is estimated at about 500 bags improves considerably no change for the better is likely to take place. In addition it is understood that any Bombay dealers, who purchased heavily in January last, are trying to divert shipment to Kathiawar ports in order to prevent these heavy commitment arriving in Bombay and still further depressing prices. If this happens it will tend to depress the local market still further.

Delhi and the Punjab

Conditions in Delhi and surrounding markets during the week under review remained extremely dull with an easier tendency.

The daily offtake is reported to be confined to actual consumption while no forward business is said to have taken place.

Pressure from factories for February/March despatching instructions is compelling holders to sell out their commitments at current rates but no business is reported to have been transacted on account of lack demand.

It is however anticipated that due to the low stock position at the factories conditions may improve during May and June.

Further North conditions remain the same with little or no demand.

Karachi

The Java sugar market in Karachi during the early part of the week showed a further decline of about -/2/- to -/3/- per cwt. as compared with last week, but later prices were maintained on account of the very low stock position.

Indian sugars as reported previously are still coming in, in small quantities and the estimated stock is about 17,000 bags.

Cawnpore

Conditions in the local market remained quiet and depressed due to the nervousness of holders and speculators who are endeavouring to liquidate their commitments at best available rates.

Demand from consuming centres is still negligible and although dealers anticipate an improvement, this is not expected to take place until stocks at consuming centres and despatches against previous commitments have entered consumption.

General

Although the Java Single Selling Agency, commonly called the *'NIVAS'* is to expire on the 1st April, 1936, it is reassuring to learn that the Government will continue to direct the Industry.

Means of production is to be reduced by about 50 per cent. namely to a tonnage of about 15,00,000 tons with a reserve of some 20 per cent in case of any alteration in the World situation. During the time of reorganisation plantings are to be fixed in accordance with sales made during the previous season.

This news has been met with great satisfaction and it seems unlikely that the World situation will again be embarrassed by Java holding such enormous stocks as to render it necessary for her to liquidate these at any price. Such liqudations in the past have been the main cause of depression in the trade and a deterrent to buyers to holding more than their immediate hand to mouth requirements.

SHELLAC

Calcutta, March 28.

The problem of conforming to the price officially settled by the London Shellac Trade Association is still far from settled. Supplies are still obtainable at prices far below the official price and reports of sales of as much as 10,000 packages at a price of only 45 s. per cwt. have been received from Mincing Lane. The official prices are 68 s. and 70 s. per cwt. for March and May deliveries. These private transactions reduce the official market to almost a nominal aspect.

The significance of these latest "outside" dealings is that they are not, apparently, for account of American holders. Thus it is clear that, quite apart from the American interests, there are other holders of appreciable quantities who prefer to cut their losses rather than enter a pool whose price-policy might compel them to carry the stocks for a very long period. Efforts to form a pool have not yet been abandoned, but the prospect of unanimity among substantial holders, upon which the provision of new and strong support depends, grows more remote.

There was a fair enquiry for all grades. T. N. was sold at Rs. 23 while fines and superfines fetched good prices. A fair volume of business has passed but at the close sellers are reserved.

RESERVE BANK AND GILTEDGE

Will the inauguration of the Reserve Bank of India make any material change for giltedge prospects?

We think, it will.

The most important responsibility of a central bank is the maintenance of balanced or steady conditions in the money market. Towards this end, its speciality is open market operations. They are, so to say, experts in open market operations.

With currency administration in the hands of a Government Department, there is timidity, half-heartedness or even remissness in open market operations. First of all, departmental officials cannot sense the market situation as accurately as could trained bankers. Second, red tapism involves consultation all over the line before operations could be initiated. They are, therefore, (even when they are undertaken) neither timely nor effective.

A Central Bank has the aptest machinery for feeling the pulse of the market from moment to moment, for shaping operations in the light of such appreciation, and for putting through transactions with maximum effectiveness.

blame that it is not doing its task properly. No Governor worth his salt will lay himself open to this reproach.

Back-door contraction of currency, artificial fostering of stringency, and callous disregard of giltedge disruption—these are things which would disappear in a Reserve Bank regime.

In simple terms, the guidance and control of the money market will be in accord with scientific canons—and not a mere matter of whim or caprice.

In welcoming the inauguration of the Reserve Bank on April 1, we ring out whim and caprice; we ring in skill and science.

In this connection, and as of special significance to the present topic, we may express gratification that the presiding genius of the Bank is Sir Osborne Smith who had, in the past, coaxed and coerced an unwilling Government to undertake open market operations on occasions; and who had put through these transactions in a way that has benefited the market and the Government alike.

Sir Osborne is a wizard of the money market. The dawn of his stewardship of the Reserve Bank is the biggest bullish factor in the giltedge market.

But the question may be asked: Will he be able to undertake open market operations (if need arises for them) from the very commencement of the Bank's working?

To start with, there is only Rs. 5 crores received as share capital. The sums due from member banks by way of compulsory deposits will be paid in only as from July 1. The resources at the start will, therefore, be on the small side.

There are, however, the Public Deposits which should be in the neighbourhood of an average of Rs. 7 crores. Other accounts will also start accumulating.

Taking all factors into consideration, there is, we may bet, sufficient sum for such open market operations as may be found necessary.

And after all is said and done, what is the total outlay that may be needed at any one time for the effective carrying out of an open market policy? If only the authorities understand that a stitch in time saves nine, purchases of securities for a maximum of Rs. 1 crore at the psychological moment will act like magic.

If the psychological moment is missed, three crores may fail to do the trick which the one crore could have done.

A central bank is expected to know what is what about these psychological moments and to act with promptitude and with vigour.

The Reserve Bank will, at all times, find its resources adequate for the kind and extent of open market operations which may be found necessary in a market like ours.

(Continued on page 1160)

RELAPSE OF EASE IN MARKETS

Outlook Continues Uncertain

(Special Cable)

By Mr. R. Gordon Cummings

London, March 28.

Markets easier after earlier recovery.

Uncertainty continues.

Outlook doubtful.

Imperical Chemicals have shown record profits of £6,349,107. Year's dividend has been up by half per cent. to eight per cent. It is decided to exchange two deferred shares into one ordinary against the proposal of four deferred shares into one ordinary share.

We have cried ourselves hoarse for the past two months, urging the authorities to make purchases of securities from the open market with a view to remove monetary stringency and to take off the excessive floating stock of 3½ per cent. Rupee Paper. Our cry has been of no avail. We have not even the means of knowing what kind of reaction this repeated suggestion has made on the authorities.

A Central Bank cannot turn a like deaf ear to suggestions so strongly pressed from all quarters. If the market experiences stringency which ought not to be there, the Central Bank will be liable to

Worth-While Investments :

INDIA :

STAR IN SUGAR INDUSTRY

BELAPUR'S UNIQUE ADVANTAGES

By "Watch-dog"

While Belapur Sugar was below Rs. 200, Mysore Sugar and Balrampore Sugar were round-about Rs. 15, I tipped these shares as the most reliable propositions in the sugar section. They have shown amazing rise. Belapur is now quoting Rs. 311½ ; Mysore Rs. 28¾ ; and Balrampore Rs. 22⅞.

There is evidence that, at current levels, they are somewhat over-valued. But the investor will do well to keep a watch especially on Belapur Sugar and make purchases at every favourable opportunity.

From the point of view of yield per cent., there are a good many other sugar shares which are far more attractive. But the outstanding feature of Belapur is that it will show the best record of earnings, whatever the vicissitudes of the Indian sugar industry in the future.

Belapur sugar has a few "specialities" which give it a dominant position. In this regard, Mysore Sugar is on par with Belapur.

Both are self-contained with regard to cane supplies. Both are situated in areas which are not by any means crowded with sugar factories. Both have arrangements for getting sugar cane delivered at the factory in the freshest condition possible. Both may be sure of adequate supplies of cane at reasonably steady and favourable prices.

Belapur Sugar was started nearly a decade and a half ago by Marshall Sons and Co. Then came the severest slump in sugar trade. Shares dropped to a few rupees. They were then hundred rupee shares. When things looked extremely black, Bradys took over the company from Marshalls.

Immediately thereafter, there was reconstruction of the capital of the Company. The 100-rupee shares were reduced to Rs. 50. The paid-up capital was reduced to Rs. 18.80 lakhs. That is, the assets were written down by Rs. 18¾ lakhs.

Bradys had a tough job on their hands in clearing up the effects of the earlier depression. They went ahead, however, with courage, enterprise and skill. By the time the sunny days for the domestic sugar industry dawned, Bradys had brought the Company to a state in which it could take full advantage of the favourable conditions.

The balance-sheet as at September 30, 1934 shows an extra-ordinarily strong position. And it must be remembered that this is, in large part, the result of the working of a bare quinquennium.

Against a capital of Rs. 18.80 lakhs, Reserve Fund, inclusive of the amount provided in 1933-34 accounts, stands at Rs. 14.25 lakhs. Reserve for Extension stood at Rs. 2 lakhs ; and this has been used up in 1933-34, very much in the nature of additional provision for depreciation. Tax provision is on a scale that will leave a surplus over, after 1933-34 dues are met.

Reserves are thus extremely strong. This is the more remarkable as this position is the result of the working of a comparatively short pepriod.

On the assets side, the following table shows the present position :—

	(In lakhs of Rs.) Gross Block	Nett Block
Buildings	5.78	2.51
Plant and Machinery ...	4.81	0.94
Machinery in transit ...	...	0.91
Cane milling plant ...	15.40	9.19
Rly. siding	0.86	0.34
Light Rly.	4.46	3.02
Furniture	0.36	0.11
Electric installation ...	0.12	0.10
Total ...	31.79	17.12

The other assets are: Stores Rs. 1.20 lakhs ; Crops in progress at cost Rs. 8.17 lakhs ; Advances etc., Rs. 0.46 lakhs ; Government securities Rs. 15.33 lakhs ; Cash Rs. 2.19 lakhs.

Net Liquid Assets are over Rs. 17 lakhs.

Turning to profit and loss statement, the position is even more gratifying. Profit in 1933-34 was Rs. 11.65 lakhs. Rs. 1.25 lakhs is appropriated as routine depreciation. Additional depreciation on milling plant Rs. 1 lakh ; Reserve Fund Rs. 4.00 lakhs ; Tax provision Rs. 1.00 lakh. The dividend distribution is Rs. 10 per share of Rs. 50 plus Rs. 2 bonus, free of tax. Carry forward is Rs. 7,196.

The price of a share is Rs. 50. Current market rate is Rs. 304⅜. A dividend of Rs. 12 on a share quoting Rs. 304⅜ gives an yield of 3.94 per cent. tax-free.

The yield, certainly, appears too low. But future prospects are particularly favourable.

The Company grows most of the cane required. Over 3,500 acres are under crop each season. The cultivation part of the Company's operations is conducted in the most scientific manner. The yield per acre is the best in India and, I believe, compares favourably with Java. The cane grown is of fine quality.

The Company has been establishing records for the longest crushing season in India.

The Estate is being steadily expanded. And experimental work on new canes and irrigation problems is continually engaging attention.

Allocations to reserve, depreciation etc., in 1933-34 were nearly one and a half times the sum distributed as dividend. This proves that the dividend could have been larger.

Amongst Indian sugar companies, Belapur will prove one of the steadiest dividend-payers.

THE ARRAH-SASARAM LIGHT RAILWAY CO., LTD.

NOTICE is hereby given that the Fiftieth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Wednesday, the 10th April, 1935, at 10-30 p.m. for the purposes of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th September, 1934, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 3rd to the 10th April, 1935, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Calcutta, the 27th March, 1935.

INVESTMENT BREVITIES

Gondalpara, whose annual meeting is to be held on March 29, is an attractive investment at current level. The paid-up share is Rs. 300; the market quotation is Rs. 1027½. The dividend for 1934 was Rs. 60 per share. This gives an yield of 5.84 per cent. tax free—one of the best yields now available.

The Company has 600 looms. Its capital is small at Rs. 10.80 lakhs. The debentures, which once stood at Rs. 10.80 lakhs, have been paid in large part. Only Rs. 1.12 lakhs is outstanding; and Debenture Redemption Fund amounts to Rs. 1.12 lakhs. Strong reserves. Plentiful liquid assets.

Profits are quite satisfactory. They were Rs. 4.08 lakhs, working out to nearly Rs. 350 per loom per half-year. Depreciation allocation was Rs. 2.00 lakhs. Dividend distribution at Rs. 60 per share absorbed Rs. 2.16 lakhs. Carry forward is Rs. 1.68 lakhs. The small-sized capital makes the shares particularly attractive.

* * *

I recommended, the other day, Bisra Lime, which, at the current level of Rs. 57½, gives an yield of over 8½ per cent. A correspondent points out that this 'tip' is of no value for the simple reason that shares are held in special quarters and none could be bought in the market. The shares will certainly not be available at Rs. 57½. Why should any holder sell them? Raise the bid and make a try. Perchance, you may succeed.

* * *

Below are the results of Reserve Bank applications. It will be observed that all applicants for and below five shares in Calcutta and Rangoon will get full allotment. These shares started off in great style. The vagaries of the giltedge market during the period when the list remained open had the effect of damping the ardour of subscribers. The shares, too, have shed a good part of the hefty premiums at which they started. They were, at one time, as low as Rs. 10 premium. I do not regret this, as frenzied activity and frantic premium in these shares must be deprecated.

	Nominal value of shares applied for. Rs.	No. of applications.	Total nominal value of shares allotted to the Area. Rs.
Bombay ...	3,34,43,800	51,998	1,40,00,000
Calcutta ...	1,63,72,000	23,917	1,45,00,000
Delhi ...	2,39,40,900	34,093	1,15,00,000
Madras ...	1,31,53,200	21,627	70,00,000
Rangoon ...	35,91,200	3,157	30,00,000
Total ...	9,05,01,100	1,34,792	5,00,00,000

* * *

Compairing the charges of telephone in Bombay with those in Calcutta, I gave expression to a grouse last week. It looks as though the Powers have heard my prayers. I have just received a communication from which I gather that sundry reductions will be effected in Calcutta telephone charges as under:

Call Charges:

5 per cent. discount for prompt payment will be increased to 12½ per cent. or two annas per rupee.

Internal Extensions:

(*a*) with inter-communication—Annual Rental reduced from Rs. 70 to Rs. 55,

(*b*) without inter-communication—Annual Rental reduced from Rs. 50 to Rs. 40. The latter may be hired on a monthly basis at Rs. 4. Proportionate refunds on current contracts will be made on renewal.

Installation fee:

Rs. 30 reduced to Rs. 20.

Removal fee:

Rs. 35 reduced to Rs. 25.

I am glad that Bengal Telephone has made this start. I am sure the results will prove that more substantial reductions will be justified by more substantial increases in telephone users and, generally, in earnings.

Worth-While Investments:

BRITAIN:

ASSOCIATED BRITISH MALSTERS

By R. Gordon Cummings

This company was originally formed as Gilstrap, Earp & Company, Ltd., to acquire the business of the same name founded in 1750. In 1928 the Company was made public, and in 1929 the name was changed to its present title. The present concern is an amalgamation of Gilstrap Earp & Co. with nine other old established malting businesses manufacturing brewing malt and other products. The merger represents one of the largest and best equipped malt manufacturing concerns in the world owning or operating as it does over 200 maltings, 16 grain warehouses and other properties. In recent years activities have been extended, and a successful business in chicken food is being developed by John Crisp & Sons, one of the subsidiaries.

Although highly geared, the capital structure is simple, the authorised and issued amount being £1,250,000, comprising 500,000 6 per cent. £1 cumulative preference, 500,000 7 per cent. £1 A cumulative preference, and 1,000,000 5s. ordinary shares. There are no debentures, but at 31 August last the parent company had a bank overdraft of £106,385. The 6 per cent. preference dividends are payable on March 31, and September 30, the A preference dividends on January 1, and July 1, and the ordinary distribution in November.

In view of the company's close association with the brewing industry, it is only natural that profits should rise and fall with the prosperity or otherwise of the latter industry. Hence, as 1932 and 1933 were poor years for brewers, it is not surprising that the profits disclosed in the following table were also poor for the two years of Associated British Malsters ended August 31, 1933. Previously profits had been steadily rising, but it is satisfactory to note that excellent recovery was recorded during 1933/34.

	Net profit after Tax £	Pref. Div. £	Ordinary percentage Earned	Paid	To Reserve £
1928 A.	49,072	38,205	19.1	17½	B. 1,021
1929 A.	86,698	36,123	18.1	15	20,000
1930	101,436	50,332	26.0	15	20,000
1931	104,580	55,101	29.4	15	C. 26,000
1932	48,838	88	Nil	Nil	Nil
1933	54,585	5,835	3.1	Nil	10,000
1934	90,656	41,010	21.2	10	D. 17,000

A. Before crediting £15,625 from share premium account in both 1928 and 1929.

B. To capital reserve.

C. To dividend equalisation reserve.

D. Including £7,000 to property redemption fund.

IMPERIAL BANK OF INDIA

It is hereby notified that as from the 6th April, 1935, the Offices of the Imperial Bank of India in Calcutta will close at 1 p.m. on Saturdays.

B. A. C. NEVILLE,
Secretary & Treasurer.

IMPERIAL BANK OF INDIA,
Calcutta, 25th March, 1935.

Last year it was decided that the amount of £110,000 previously standing to the credit of capital reserve account should be transferred to form the nucleus of a properties redemption and depreciation fund. It is intended to make an annual addition to this fund calculated to write off the value of freehold and leasehold properties over a term of 50 years. The contribution in respect of 1933/34 was fixed at £7,000. Hence, in future allowance will have to be made for this allocation, but as profits should show further recovery during the current twelve months, little, if any, decline in earnings is to be expected.

This company sets an excellent example in publishing a consolidated balance-sheet in addition to its ordinary statutory statement. The figures of the parent company after adjusting final appropriations for the last two years ended 31 August, 1934 are summarised hereunder:—

		1934		1933
		£		£
Assets—				
Subsidiaries-Shares	...	1,549,718		1,549,718
Due (net)	...	38,166		Contra.
Cash, etc. ...	...	35,382		314
Total	...	1,623,266		1,550,032
Liabilities—				
Capital ...	...	1,250,000		1,250,000
Creditors, etc. ...	...	144,562		23,193
Subsidiaries-Due (net)	...	Contra.		69,770
Reserves-Property	...	117,000	A.	110,000
General, etc.	...	86,000		76,000
P. & L. Balance ...	...	25,704		21,069
Total	...	1,623,266		1,550,032

A. Capital reserve £110,000 was in 1934 transferred to property redemption reserve.

Reverting again to the property redemption fund, this in effect arises partly from a revaluation of properties in 1928, which showed an appreciation of £284,975, over book figures to which was added in that year £1,021 for profits. From the total of £285,996 was deducted £75,996 expenses in connection with the acquisition of subsidiaries and the increase in capital. This left a balance of £210,000, of which £100,000 was transferred to depreciation reserve and £110,000 to capital reserve, the latter figure being re-named properties redemption fund in 1934.

The last consolidated balance showed that the investment of the parent company in subsidiaries was fully represented by tangible assets, nothing appearing for goodwill. At 31 August last fixed assets of the entire group were valued at £1,206,625; and liquid assets at £742,352, making a total of practically £1,949,000. Creditors, bank loans, etc. amounted to £225,455, while reserves and undistributed profits exceeded £473,500, or practically twice the ordinary capital of the parent company.

It has already been pointed out that earnings for the current year, even after allocating a sum to property redemption fund, should be maintained at the 1934 level. As the liquid position is not exceptionally strong, a conservative dividend policy is likely to be followed again. Therefore the ordinary dividend may be restricted to 10 per cent.; but, even if this is the case, the shares will yield 5⅝ per cent. at 9s. 3d. There is obviously scope for capital appreciation.

Combined preference dividends take under £50,000 net per annum, and as they were earned almost twice over last year both issues are good investments at the common price of 26s. 3d.; the 6 per cent. shares yield over 4½ per cent. and the 7 per cent. issue over 5¼ per cent.

COURTAULDS.

When dealing with the history of Courtaulds, the great artificial silk combine, two weeks ago, I am afraid that I did not make absolutely clear the method by which the issued capial had been increased from only £2,000,000 in 1919 to its present amount of £32,000,000. The whole of this increase represented free share bonuses. In January 1920 the ordinary capital was doubled by a 100 per cent. bonus, while in November of the same year two further ordinary shares were issued for every one share previously held, thus bringing the issued ordinary capital up to £12,000,000. The bonus in January 1920 was made as the result of a valuation of over £7,800,000 placed on the holding in Viscose of America.

In 1923 the shares originally held in the Viscose Company of America were exchanged for shares in the American Viscose Corporation, a Company formed in the State of Delaware, U.S.A., having an authorised capital of 100,000,000 dollars. The total par value of the shares received in exchange by Courtaulds, Limited, was 85,014,400 dollars, consisting of 37,784,400 dollars preferred stock, and 47,230,500 dollars common stock. The company received in cash £6,377,836 as a return of capital from the Viscose Corporation in respect of part of its holding of preferred stock.

During 1924 the directors decided to revalue the shares held in the American Viscose Corporation at £16,013,629 and to carry the additional value to capital reserve account. The capital of the company was then increased by the creation of 8,000,000 £1 5 per cent. preference shares, which were distributed as a bonus to shareholders, fully paid, in the proportion of two preference for three ordinary.

In March, 1928, the directors placed a value of £18,557,248 upon the shares held by the company in the American Viscose Corporation, and carried the additional value thus shown to the credit of capital reserve account, making the amount standing to the credit of that account £9,131,698. A bonus issue was then made out of reserves of one new ordinary share for every ordinary share held.

The whole of the American undertaking has been built up and paid for out of profits.

THE BUKHTIARPUR-BIHAR LIGHT RAILWAY CO., LD.

NOTICE is hereby given that the Sixty-Fifth Half-yearly Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Wednesday, the 10th day of April, 1935, at 10-35 a.m., for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 30th September, 1934, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 3rd to the 10th April, 1935, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

CALCUTTA,
The 27th March, 1935.

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

Friday morning.

The subdued feeling, which was in evidence in the market during the last few weeks following the general disorganisation of markets abroad, still continued and uncertainties and unsettlement prevailed. Although the precipitous fall in the Giltedge Section has been arrested the general confidence has not yet returned. The improvement manifested in Jute Mills section recently has not been maintained. Cottons remained dull and a neglected, while only a limited business was put through in coals at lower levels.

Among Miscellaneous Industrials, dull conditions have obtained. Teas remained neglected.

Government Securities.—Owing to political uncertainties, the sagging tendency of Government Securities still continues. 3½ percent. Government Paper, which was quoted down to Rs. 92/4 on Tuesday was again marked up to Rs. 92/12 on Wednesday on the news of the satisfactory progress of the discussions in Germany, but this optimistic feeling did not last long and at the time of writting the Paper again reverted to Rs. 92/5. 4 percent. (1960/70) was quoted at Rs. 105/2 at the time of writing and 5 per cent. Loan (1945/55) at Rs. 116 ; 3½ per cent. Loan (1947/50) was marked at Rs. 101/7 ; 5 per cent. Loan (1939/44) at Rs. 107/11 and 5½ per cent. Loan (1938/40) at Rs. 108/-. 6½ per cent. Treasury Bonds (1935) changed hands at Rs. 101/5. The Bank rate remained unchanged at 3½ percent.

Fixed Interest bearing Securities.—Rather less business was reported in Preference shares. Among Jute Mills issues Auckland (Pref.) changed hands at Rs. 137. Hastings (Pref.) continued to be asked for round about Rs. 120. Hukumchand (Pref.) recorded a deal at Rs. 113. Kamarhatty (Pref.) was marked at Rs. 130. Lawrence (Pref.) at Rs. 145 and Lothian (Pref.) at Rs. 147. Howrah ('A' Pref.) changed hands at Rs. 137 and Northbrook (Pref.) at Rs. 145 while there are buyers for Union (Pref.) at Rs. 145.

Among Industrial Preferences a fair business was reported in Bengal Telephone (Pref.) at Rs. 15. Burn & Co. (6 per cent. Pref.) was marked at Rs. 113. Indian Standard Wagon (Pref.) was quoted down to Rs. 115 from Rs. 126. Associated Hotels (Pref.) was mentioned at Rs. 100, and Britannia Biscuits (Pref.) at Rs. 14. Kumardhubi Engineering (Pref.) was marked down to Rs. 60 from a quotation of Rs. 82. Indo-Burma Petroleum (Pref.) recorded a deal at Rs. 118. There are sellers of Burn & Co. (7 per cent. Pref.) at Rs. 130 and B. I. Corporation (8 per cent. Pref.) at Rs. 145 ex. dividend with no declared buyers.

More enquiry was in evidence for Calcutta Port Trust and Calcutta Municipal debentures although the actual volume of business was very small. 4 per cent. (1907-37) Calcutta Municipal debentures changed hands at Rs. 101-4 and 4 per cent. (1912-42) at Rs. 103. 4 per cent. (1924-64) Calcutta Improvement Trust debentures found buyers at Rs. 103.

Among Jute Mills issues 7 per cent. (1932-42) Hukumchand debentures was dealt in at Rs. 112-4.

Other Investment Stocks.—Imperial Bank's shares were knocked down to Rs. 1,530 for the fully paid-up issues and to Rs. 380 for Contributories due to lack of support, presumably in view of the weakness in Government Securities. At the time of writing the quotation for these scrips improved slightly to Rs. 1,542-8 for the fully paid up issues and to Rs. 384 for the partly paid up issues owing to some enquiry from Bombay side. Central Bank's shares also were marked down to Rs. 35 and Bengal Central Bank was a shade easier at Rs. 9-12. Reserve Bank of India's share was quoted at Rs. 15 premium at the time of writing.

No business was reported in any Insurance Companies' shares up to the time of writing of these notes. Among Light Railways only two deals were reported, one in Hardwar Dehra at Rs. 116 and the other in Sara Serajgunge at Rs. 92 although there are buyers for Katakal Lalabazar at Rs. 92 and Ahmedpur Katwa at the same figure.

Among other Transport Companies shares, Bengal Assam Steamships (Ordy.) kept steady at Rs. 215 while a slight improvement was registered in India General Navigation and Railway (Ordy.) Port Shipping remained unchanged at Rs. 15.

Cottons.—Only a limited business was put through in Cotton shares. Bengal Nagpur (Ordy.) on the publication of its report, which was considered unsatisfactory, was marked down to Rs. 15. Dunbar (Ordy.) on the other hand recovered slightly to Rs. 105 from their recent fall ; Kesoram (Ordy.) changed hands at Rs. 3-12. Elgin Mills (Ordy.) at Rs. 101 and New Victoria (Ordy.) at Re. 1-6.

Coals.—Inspite of the optimistic not sounded in the Presidential speech of the Indian Mining Association recently about the future of coal trade, a quieter feeling has obtained in this section and only a small business was reported. Amalgamated changed hands at Rs. 28-8; Bengal was marked down to Rs. 262 and Bengal Nagpur (Ordy.) at Rs. 47. Burrakur Ordinary eased off further to Rs. 12-4 and Hurriladih to Rs. 15-4. New Manbhum was also easier at Rs. 63-8, Equitable (Ordy.) on the other hand held up its own and is quoted at Rs. 36-4. Rewa on the declaration of a dividend of annas 6 per share against annas four per share paid during the previous half-year, kept very steady at Rs. 14-10. Standard also remained steady at Rs. 30 while West Jamuria improved to Rs. 13.

Jutes.—Not much fluctuation was reported in Jute mills' shares since we reported last. Commodity markets remained steady during the period under review and this was reflected in share values. Howrahs after opening at Rs. 61-11 on Monday gradually moved upto Rs. 62-3 on Wednesday, but on Thursdays in sympathy with the weakness in Government Securities and tight money conditions, declined against Rs. 61-12. Kamarhattys which improved from Rs. 607 to Rs. 618 again sagged to Rs. 612 at the time of writing.

Among others, Clives were quoted down to Rs. 35-8. Hukumchands to Rs. 14-10 Birla to Rs. 16 ; National to Rs. 25-4 and Presidencies to Rs. 5-12. Reliance, on the other hand kept steady at Rs. 80 and Chitavalsah at Rs. 31-4.

Among bigger denominations, the improvement in Auckland from Rs. 244 to Rs. 264 has been maintained. Anglo-India which was marked down to Rs. 508 during the last week-end again recovered sharply to Rs. 530 on Wednesday, the rate at the time of writing is, however, a shade easier. Fort William which sagged to Rs. 363 also recovered to Rs. 380 but at the time of writing again eased off to Rs. 374. Ballys are now quoted at Rs. 245 ; Champdanys at Rs. 208 ; Kanknarrahs at Rs. 530 ; Orients at Rs. 210 and Union at Rs. 545. The tone at the time of writing was quiet but steady.

Electricals.—Only a few deals were reported in Electrical companies' shares at last levels. Bareilly Electrics changed hands at Rs. 15 ; Mirzapore at Rs. 7 ; Patna at Rs. 17-4 ; Rawalpindi at Rs. 22-4 and United Provinces Electrics at Rs. 162-8.

Engineering.—This section was rather featureless. Bengal Iron was dealt in at Rs. 4-2 and Indian Iron and Steel at Rs. 6-13.

Miscellaneous.—In this section also there was no feature of outstanding interest. British India Corporation Ordinary kept steady at Rs. 2-12 ex-dividend Brittania Biscuits at Rs. 7-4 and Indian Cables at Rs. 4. Indian Wood Products are now quoted at Rs. 33-4.

Bengal Paper (Ordy.) receded to Rs. 97 while Titaghur Paper (Ordy.) was also marked slightly easier to Rs. 21.

Sugars.—These are rather irregular. Balarampur have maintained their improvement and are now quoted at Rs. 22-8 while Cawnpore (Ordy.) receded to Rs. 33-12. Basti was quoted at Rs. 227-8 and Belsund at Rs. 7-12. New Savan was quiet at Rs. 12-12 so also Samastipore Central at Rs. 10. Punjab Sugar changed hands at Rs. 312.

Teas.—This section was without any feature. Only two deals were reported during the early part of the session, but towards the close more business was reported at lower rates. We however strictly adhere to our views expressed in these columns that this is the time to buy better class Tea shares which are standing at low levels.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From our Correspondent)

Bombay, Friday Evening

Money Market: Money was easy with intercall fluctuating between 2 and 3 per cent.

Exchange: The market was seady with Banks selling T. T. at 1s. 6 3/32d. for March; 1s. 6 1/16d. for April; 1s. 6 1/32d. for May-June and 1s. 6d. for July-December. Banks are buying 3 months Bills at 1s. 6 1/6d.

Securities: Rupee Security market eased down at close much more than warranted by London advises. On heavy selling especially from Calcutta 3½ per cent. Paper has lost about 3 rupees and closed at Rs. 90/9. Other rupee securities also closed much lower than last week. 1941 closed at Rs. 100/6; 1947-50 at Rs. 101/9; 1943 at Rs. 105/4; 1960-70 at Rs. 104/5; 1955-60 at Rs. 111/12; 1935 at Rs. 100/12; 1939/44 at Rs. 107/14; 1940/43 at Rs. 108/14; 1938-40 at Rs. 108; 1945-55 at Rs. 115/8; Bombay Development at Rs. 101/12.

Shares: In sympathy with Security market and due to uncertainties of the currency and political situaion, this section eased down at close.

Textiles: Textiles remained practically unchanged at lower levels. Bombay Dyeing closed at Rs. 885; Central India at Rs. 345; Century at Rs. 299/6; Colaba at 140; Gokak at Rs. 206/4; Kohinoor at Rs. 207/8; New Great at Rs. 161/4; Swadeshi at Rs. 202/8.

Hydro Electrics: Tata Powers have lost about 60 points and closed at Rs. 1,535. Andhra Valleys were down at Rs. 1,627/8 and Hydros at Rs. 166/4.

Iron and Steel: On rumour that Belgium had definitely gone off gold standard, this section ruled slightly lower in the beginning of the week but later on, firming up of Belga in terms of other currencies, Ordinaries and Deferreds were steady at Rs. 146 and Rs. 670, although at the close, on news of Belgian bourses being closed for three days, this section closed lower again but the fall was not as much as was anticipated. Latest cable information is that Belgium wished to remain on gold standard and that Belgian Cabinet has asked Parliament for 30 per cent. devaluation of Belga. This virtually amounts to Belgium going off gold standard and it is likely that Ordinaries and Deferreds may go down further and therefore, we do not advocate fresh commitments unil we are sure of the trend of the market. We would, however, remind there is no need for much alarm since the Governor-General-in-Council has no powers to increase or decrease duties in any emergency of this kind under Steel Protecion Act of 1934. Great Britain, very recently increased duties on Iron and Steel and it is hoped that the Government of India would, in case of Belgium, either going off gold or devaluing their currency, ask prompt action to protect our industry. Ordinaries and Deferreds closed at Rs. 142 and Rs. 650 respectively ; Second Preferences closed at Rs. 168.

Cements: Cement shares were remarkably steady at the beginning of the week but closed lower on account of heavy selling. Since Bundi Cement Company and Shahabad Company have done exceedingly well during last year, we prefer picking up of these shares on further reaction. Indian Cements and Shahabad Cements both dropped down about 30 points and closed at Rs. 405. Bundi closed at Rs. 43/8 ; Gwalior at Rs. 130 ; Katni Deferred a Rs. 1400; Ordinary at Rs. 400; Okha at Rs. 227/8; Punjab at Rs. 26/14 and United at Rs. 83/8.

Miscellaneous: Belapurs had a gradual fall during this week and closed at Rs. 298/12, the lowest of the week. Bombay Burmas also were down at Rs. 385 and New shares at Rs. 120. Bombay Steam, Bombay Telephone and Bombay Trams are lower at Rs. 285; 115/8 and Rs. 160 respectively. Petrols were neglected at Rs. 3/4.

Banks & Insurances: Bank shares have moved down with Securities and Imperial Bank fully paids and party paids were lower at Rs. 1,541/4 and Rs. 385 respectively. Barodas were down at Rs. 99/8, Centrals at Rs. 35/10; Bank of Indias at Rs. 121 and Unions at Rs. 5/11.

MADRAS STOCK EXCHANGE.

(*By Wire*)

(From our Correspondent)

Madras, March 29.

The worsening of the political situation in Europe and the consequent reactions on the London Stock Exchange made Indian markets nervous. A heavy landslide occurred and the prices fell precipitately for almost all issues. This market was bullish in paper for a long time. The heavy liquidation by a prominent operator has not yet ceased. There was considerable selling in 4 per cent. 1960-70 Loan and 5 per cent. 1945-55 Loan. There is still a floating supply of about Rs. 30 to Rs. 50 lakhs of paper on this market. Short and medium-dated bonds were completely ignored. Mysore loans have several sellers, without attracting buyers. The demand for other classes of fixed interest securities were meagre. Nilgiri Neerugundi Debentures were taken up at Re. 1 premium, Spencers "B" Preferences were done at Rs. 12-8 and Rs. 12-10, whilst Tata second preferences changed hands at Rs. 11 and Vasantas at Rs. 107. Amongst Banks, Imperials fell perceptibly to Rs. 1,530 and Rs. 375, at which rate some support was forthcoming. Other local bank shares were nominally unchanged. Public utilities were steady with Vellores in good request at Rs. 13-4. Mills were erractic—Buckinghams touched Rs. 206 and Gokaks Rs. 207. Premier Hosiery ordinaries were dealt in several times at par. Cements were weak, with no business reported, whilst in Sugars, with the exception of Deccan Sugars at Rs. 302, India sugars were easy at Rs. 9-12 and Mysore sugars at Rs. 28-12. The others were neglected. Rubbers were idle as also Tease. In the Miscellaneous Section Tata Steels fluctuated violently. Following the course of the Belga, business was restricted. Markets closed with a nervous undertone in most secions. Further falls appear likely.

LONDON STOCK EXCHANGE

The unfavourable news from Germany and the uncertainty about the Belga had a depressing effect on most sections of the market and during the week under review most sections on the Stock Exchange were dull and prices were quoted lower. Giltedge was weak. Indian Loans were steadier. Home Funds were rather irregular. Teas were unchanged. There was some improvement noticeable in Rubber shares. Oils were marked down and Home Rails showed a declining tendency on account of poor traffic returns. Industrials were dull.

NEW YORK STOCK EXCHANGE

The market was dull throughout the week. United States Steel are working 45 per cent. of their capacity. National Distillers declared 50 cents dividend. Brokers Loan were down to 5 million dollars.

GERMAN NEWS IMPAIRS EARLY STEADINESS

RECOVERY PRACTICALLY CERTAIN

ELECTRICAL DEVELOPMENTS

By R. Gordon Cummings.

Special for "INDIAN FINANCE"

By Air Mail

London, Mar. 19.

Up to Friday evening Stock Markets were showing all round steadiness with several firm features such as gilt edged, home rails, iron, coal and steel shares, gold issues and a number of leading industrials. Week-end developments in Germany exercised, however, an adverse influence on Monday, when a precautionary marking down on the part of jobbers was seen in practically every section. In view of the healthier tone in evidence during the latter part of last week this setback, temporary though it may be, is certainly disturbing. At the time of writing most of the gains of the previous few days are practically wiped out. As recovery is pratically certain, holders of first-class stocks should not be scared by the present temporary unsettlement.

Going back a day or two, markets had every appearance of improving on the satisfactory industrial and trade news published last week. In addition to the appearance of a number of gratifying industrial reports trade and revenue figures were good, sterling had recovered part of its former losses and weak speculative positions had been reduced to a minimum. Had it not been for the latter factor, I am certain that we should have seen some heavy liquidation yesterday. Despite these satisfactory items of news, public buying has been almost completely absent. Until the outlook abroad is more certain support from this direction cannot be looked for.

Following publication of satisfactory revenue figures and the good overseas trade returns for February, together with a sharp recovery in sterling and a closing of bear commitments on it becoming known that the joint stock clearing banks had increased their gilt edged holdings last month by about £13,000,000, Government stocks rpse one to two points. Most of these rises have now unfortunately been eliminated. India stocks are, however, much better on balance. In fact, compared with other Empire issues they are distinctly good.

German loans have naturally fallen sharply, but elsewhere in the foreign market prices are little changed from a week ago.

In the insurance market Employers Liability have fallen sharply to 62s. 6d. on the announcement that a final dividend of only 40 per cent., against 50 per cent. a year ago, is being paid for the past twelve months. Compared with 80 per cent. for 1933 this makes a total of only 70 per cent. for 1934. On the other hand *Eagle Star and British Dominions Insurance* is making up the 1934 dividend to 22½ per cent., compared with 20 per cent. for many years past. The £3 fully paid shares are slightly higher at £19.

Home Railway stocks are recovering sharply after their recent dullness, as it is being gradually appeciated that weekly traffics for the year to date cannot be taken as any definite guide of the results for the current year. Declines last week aggregated £55,000, but once again traffics disclosed an increase. *London Midland and Scottish* ordinary has recovered to 18, *Southern* deferred to 22¼, and *London and North Eastern* second preference to 23. I look for further recovery, especially as there still appears to be a fairly big "Bear" account open.

After earlier firmness industrial shares are mostly lower, *Courtaulds* being 49s. 3d. *Dunlops* 47s. 6d. *Pinchin Johnson* 40s., on disappointment with the dividend, *Austin Motors* 44s. 6d. and *Imperial Tobaccos* 133s. *London Bricks* remain at 81s., while *Associated Electrical Industries* are the turn higher at 26s. On appreciation that a very high yield may be shown on the next dividend *Reynolds Brothers* have been in demand up to 26s. On dividend possibilities *Imperial Chemicals* have been as high as 37s. before reacting to 36s. 6d. on the general marking down.

Although there have been no outstanding features in iron, coal and steel shares, *Bengal Iron* have been up to over 7s. before falling back to 6s. 6d. Indications that the import duty on foreign steel is practically certain to be increased from its present rate of 33⅓ per cent. to 50 per cent. have not so far led to any activity. As a matter of fact, apart from shares of companies interested in armaments, such as *Vickers,* some issues are the turn lower, *United Steel* being 26s. 6d. *Staveley Coal* are unchanged at 38s. 9d., while moderate demand has led to a recovery in *Amalgamated Anthracite* to around 3s. 10½d. Aircraft shares, on war possibilities, have been in strong demand.

On opposition developing to the proposed fusion plan of six of the principal London electric supply companies the shares of the concerns affected have been weak. On a previous occasion I have pointed out the dangers in buying such shares.

Dealings have now commenced in the ordinary and income debenture stocks of *Elder Dempster* and *Royal Mail Realisation* Companies, the respective common prices being 14s. and 9o.

Oil shares show little change. At the time of writing dealings have not been re-commenced in *Mexican* and *Canadian Eagles.*

For the greater part of the week gold shares were comparatively idle, but on a fall in the price of the metal to 146s. 0½d. per ounce on Friday a little more activity was seen. I have already pointed out that gold shares tend to rise, not when the metal is rising but when it is falling. Indian gold shares without apparent reason have fallen sharply, *Nundydroogs* being 57s. 6d., *Champion Reefs* 39s. 6d. and *Mysores* 23s.

Copper shares are generally easier, but there is little quotable change in tins despite a set-back in the metal and the increase in the quota. On a fall in the commodity to around 5¼d. per lb. rubber shares have been weak.

Britain's Trade Recovery.

Many satisfactory announcements have been published in recent weeks relating to the improvement which has and is still taking place in industrial activity in Great Britain. Later in these notes I deal with some of the most prominent reports published within the last week.

These, however, are not the only evidences of trade recovery.

The Board of Trade returns of imports and exports for February show that industrial progress is being maintained. In comparison with February 1934 preliminary trade figures disclose that exports last month increased by over £4,000,000 to £34,098,000, while imports were the lowest for 19 months with a total of £56,302,000, or a decrease of well over £1,000,000 compared with February, 1934. In January of this this year exports were £35,481,000, while February imports are lower by £5,629,000. One of the most satisfactory features of the present returns is a continued increase in exports of manufactured goods. Other pleasing figures are those of steel output, which was 769,500 tons in February, or an increase of 62,000 tons over February, 1934, and 11,700 tons over January of this year.

In the face of these gratifying indications of Great Britain's continued trade recovery it is, indeed, surprising that industrial shares are not rising to fresh high levels. What are the reasons? First of all, there is

still some uncertainty regarding the future trend of interest rates ; and until a clearer view can be taken, it is impossible to fix a fair yield basis for equity stocks. Secondly, as I have pointed out in previous notes, it is gradually being realised that, unless something extraordinary happens, profits cannot show the same proportionate increase during 1935 as they have done in 1934. A third factor has been the uncertainty over exchange fluctuations and the possibility of currency stabilisation in the near future, while the final point, which appears to have influenced investors, is the question of whether the recent forced liquidation on the part of speculative holders is finished. In my own opinion, it is finished for the time being.

Still, however, I repeat my previous advice to the effect that yields and long-term prospects should certainly be considered carefully before indiscriminately buying industrial ordinary shares.

Chartered Bank of India.

Profits of the *Chartered Bank of India, Australia and China*, which owns over 80% of the capital of P. & O. Banking Corporation, show little change for the year ended December 31, 1934. After providing £25,000, as in 1933, for officers' superannuation fund, net profits were £441,043, against £442,467 in 1933, and £454,499 in 1932, when, however, nothing was charged to superannuation fund. A final dividend of 7% is proposed on the £3,000,000 issued and fully paid capital, making with the 7% interim already paid, 14% less tax for the third successive year. Compared with nothing in the two previous years, £50,000 is this time added to contingency reserve, leaving £177,394 to carry forward, against £206,351 brought in. Earnings on the issued capital were thus about 14.8% in 1934, comparison being with 14.9% in 1933, and an average of 23.4% per annum over the seven years to 1929, when, in addition to 14% tax free dividends, annual tax bonuses of 6½% were also paid. At £15¼ the £5 fully paid shares give the reasonable yield of over 4½%.

Electrical Developments.

Last week I dealt with the report and prospects of *English Electric Company*. At the meeting on Wednesday the Chairman was restrainedly optimistic as to the outlook for 1935 when he inferred, that given no set-back in the present rate of orders, the next accounts would show an even better improvement. I am still more optimistic now regarding the speculative possibilities of the £1 preference at 11s. 9d.

Preliminary figures of *Associated Electrical Industries* indicate profits of £325,238 for 1934, against only £184,399 in 1933. The ordinary dividend is to be doubled by a payment of 6%, while £10,289 is placed to reserve and the carry forward increased by £10,721 to £113,336. My recommendation of a week ago is, therefore, fully justified. The shares, now 26s., can still be bought with every confidence.

Although profits of *British Insulated Cables*, the big electric cable manufacturers, have increased by £41,400 to £508,500 for 1934, the dividend on the £1,666,666 ordinary capital is merely maintained at 15%, by a final payment of 10%. After placing £200,000 (£160,000 in 1933) to reserve and depreciation, the balance forward is raised by £1,000 to £301,000. At 76s. 6d. the £1 shares yield only 4% ; but in view of the satisfactory earnings they should not be parted with.

Heavy Industries on Up-Grade.

Vickers, the large concern controlling various shipbuilding, armaments, steel manufacturing and other companies, is increasing the dividend for 1934 on the £4,105,161 ordinary capital to 6%, against 4% in each of the two previous years, 5% for 1931, and 8% per annum for the four years to 1930. Profits in 1933 were £543,364. If present "war" scare talks continue the 6s. 8d. shares should rise from present price of 10s. although the yield is only 4%.

On the 14th of this month I cabled advising a purchase of the £1 deferred shares of *Stewarts & Lloyds*, the leading manufacturers of iron and steel tubes and pipes, etc. I learn on very good authority that the 1934 report, which by the way may be published by the time these notes are in print, will disclose a very gratifying increase in profits. In 1933 over 7% was earned on the deferred capital, but after a lapse of two years, only 2½% was paid on the shares. Some optimists are going for 10% this time, but although earnings may be around 15% to 20% I am not expecting more than 7½%. All the same there is scope for a good jump in the deferred from 29s. 3d. to around 35s. The recent buying has been very good.

Astounding recovery is shewn in the 1934 report of *Thos. Firth and John Brown*, the steel manufacturers, which is controlled by John Brown & Co., profits being £345,039, against only £12,519 in 1933. Including three years' arears, preference dividends for four years are paid, together with a maiden distribution of 5 per cent. tax free on the £1,450,000 A and B ordinary capital.

Colvilles, the Scottish iron and steel manufacturing company, report profits of £359,439 for the past year, after allowing £125,000 for depreciation and obsolescence. The 5½% preference shares are a promising investment yielding 5¼% at 21s. 3d.

Hadfields after the Reconstruction.

In accordance with my previous prediction it is now officially confirmed that *Hadfields*, the steel and manganese manufacturers, etc., are to reduce the £1 ordinary shares to 10s. each to provide part of the sum necessary to write down fixed assets to present day values. It is proposed to write down such assets by £972,624 to £1,331,895, and to reduce the value of trade investments by £48,186 to £114,745, or a total reduction of £1,020,810. The latter sum is to be provided as to £929,892 by cutting the £1,859,784 issued ordinary capital in half, taking £52,735 from special reserve, and allocating £38,183 from profit and loss account. The £300,000 4½% preference capital is unaffected.

Profits for the year 1934 after charging all expenses and debenture interest, but before depreciation, were £93,996 an increase compared with 1933 of £61,816. This time four years' preference dividends, requiring £41,850 net, are paid off. In future, however, the yearly charge will be only £10,463, net, and as it is estimated that an annual saving of £13,000 will accrue from the recent debenture conversion it will be seen that prospects are bright. On this basis, and assuming no change in profits during the current year, there should be available £96,500 to cover depreciation and pay ordinary dividends. On the reduced capital it would only require £46,500 gross to distribute 5% on the ordinary, thus leaving £50,000 for depreciation, etc. At 9s. 6d. the ordinary are a worth while lock-up purchase.

Other Good Announcements.

I am very pleased to record that *British Aluminium*, one of the largest producers of aluminium in the world owning its own important hydro-electric works in Scotland, is raising the dividend on the old ordinary capital from 5% for 1933 to 7½% for the year to December 31, 1934. Profits for the past twelve months were £170,192 after again charging £50,000 to depreciation reserve, which is raised to £1,200,000. The corresponding profits for 1933 were £110,850. In June 1934 the issued capital was increased to £3,500,000 in £1 shares, by 500,000 6% preference and 998,966 ordinary, making the present amounts: 1,500,000 preference and 2,000,000 ordinary. Proportionate dividends only are paid on the new shares for 1934, and the carry forward is increased by £2,600 to £55,374. I consider the ordinary shares to be a promising investment at 32s 3d. the yield is 4½%.

Godfrey Phillips, the cigarette and tobacco manufacturers, is paying 7½% on the ordinary shares, making 10% for the year, against 7½% for 1933 and 6% for 1932. Despite this increased payment I cannot make out any case for buying the shares at current level

of 42s. *Imperial Tobacco of Canada* profits rose by £30,146 to £1,195,251 for the twelve months to September 30, 1934. A final dividend of 7% is to be paid, making 10½% for the fourth successive year, while undistributed profits are raised from £1,332,445 to £1,406,827. The £1, ordinary are quoted at 51s.

Courage and Company, brewers, is paying a final of 14%, making 20% on the ordinary capital for the past year, against a total of 17% for the previous twelve months. Profits of £369,178 are £37,962 more than in 1933.

In accordance with market expectations profits of *A. W. Gamage,* the well-known stores company, have expanded satisfactorily during the year to January 31, 1935, the net figure of £60,314 showing an increase of £5,900 over 1933/34. The ordinary dividend is maintained at 9%, and as the 10s. shares yield a full 5% at 18s. they can be bought with every confidence. The management is enterprising and I look for some profitable developments in the near future.

Central Provinces Manganese Profits.

Many of my readers will be interested to learn that the results of *Central Provinces Manganese Ore Company* for the twelve months to 31 December 1934 show satisfactory improvement, trading profits being £178,455, compared with £104,299 in 1933. After deducting expenses and tax provision, and adding £1,395 (£19,341 in 1933) surplus on sale of investments, £20,000 is placed to reserve, 20% tax free paid on the 1,000,000 ordinary shares of 10s., and the carry forward increased by £7,160 to £76,953. This year's dividend comprises 7½% interim and 12½% final, against 4% less tax interim in 1933 on the old £1,000,000 capital, and 10% less tax final on the present £500,000 capital. In December 1933, 10s. per share was returned in cash on the old £1 shares. The shares, which yield 3.4% tax free, close at 58s.

Tin Quota Increased.

The International Tin Committee has fixed the export quota for the quarter commencing April 1st next at 45% on standard tonnage, this being an increase of 5% on the present quota of 40% which has been in force for practically six months. Under the proposed increase the allowable exports of the four signatory countries will be raised by 688 tons to 6,210 tons per month.

Since this announcement the price of the metal has given way, but as present turnover is small, current prices are not much guide. In the case of the tin mining companies any small reduction in the price of the metal will be offset by increased profits arising from the higher quota during the next three months. I look, however, for a recovery in the price of tin particularly as demand from America should shortly be showing a steady increase. Furthermore the recent speculative position would appear to have been reduced.

From now onwards full figures will be available of all visible supplies of the metal as in future the "buffer" stocks will be included in the published returns. Tin shares have not yet responded to this news, but now that air has been cleared of certain doubts, I look for steady recovery over the next month or so.

Market Pointers.

Judging by the improved profits of some of its subsidiaries and sub-subsidiaries, the Nigar Company has practically doubled its profits for 1934—prospects for *unilever* the large margarine, etc., combine, are possibly brighter than either I or many other people have expected. Although I am not enamoured of this company's shares as an investment, I do believe, in the light of certain remarks of one of my arbitrageur friends, that they offer scope for a sharp rise between now and publication of the report in a few weeks' time. Present price is 26s. 6d.

A dividend of 9% or 1% more than my estimate is to be paid on *Slazengers* ordinary shares. This goes against 6% for the previous year. On the announcement the £1 shares spurted to 30s. 6d. at which price they should not be sold.

For the past year *Amalgamated Metal* is increasing the ordinary dividend by 1% to 5%. My previous recommendation is thus amply justified. The ordinary are now 20s. 3d.

There has been some very knowledgeable buying on the part of influential South African interests of *Vlakfontein* and *Vogelstruisbult* 10s. shares at 41s. 6d. and 48s. respectively. This lead is worth following by the speculators.

I am sorry to say that so far my out and out speculative tip to buy *Van Emden Gold* shares has missed fire, the present price being only 15s. The sharp fall was due to disappointment over the proposal to confine immediate attention to further development work. Some comfort can be gained from the knowledge that the insiders are not selling any shares. Recovery can be anticipated.

Dubiliev Condenser ordinary shares have been firmer at around 2s. in anticipation of a good report. They can be safely held for a selling price of 2s. 9d.

My South African industrial recommendations remain remarkably firm, *Reynolds Brothers being* 26s. *Illovo Sugar* 37s. and *South African mines* 38s. 3d. Purchases are still advised.

THE BOURSES IN AIR MAIL WEEK

Paris:

The week has seen on the whole a better time on the Bourse. The improvement in sterling which took place towards the end of last week continued to stimulate most sections on the Bourse and induced a fair amount of repurchase by those who had previously sold. M. Flandin's speech at Lyons was to a great extent responsible for the cheerful tone in the various sections during the early portion of the week. But later in the week continued weak advices had their effect in causing a recrudescence of dullness. The improvement in Wall Street as well as the recovery in sterling left the market firm on the last day of the week.

On the Parquet, Rentes were irregular early in the week. There was no improvement even with the announcement of a new issue of French Treasury Bonds to the value of two milliard francs at four per cent. M. Flandin's speech caused some repurchases of Rentes, and this caused a sharp recovery on the Parquet. Rentes were irregular towards week end. Banks were fluctuating. Industrials were unchanged. Among foreign bonds the 5½ per cent. German Young Loan improved and was at a time quoted at 409½.

Internationals were quiet until the end of the week and no transactions of note were recorded. On the last day Royal Dutch Petroleums were quoted at 13,700, Suez Canal shares at 18,095, Rio Tintos at 1,029 and Central Minings at 1,658.

On the Coulisse, Diamond shares were irregular excepting De Beers Preferred and Deferred which showed a little advancing tendency. Shares in the gold mining group were firm. Rubbers and oils were unchanged.

Berlin:

During the week under review most sections were firm except for a quiet session on one or two days. Banks were better. Among industrials Fabenindustries were quoted higher during the early part of the week. These were dull later. Ford motors were dull at 55½ on the last day of the week. Among Electricals Siemens were better at 141¼ and in Rayons A. K. U.'s improved. Shippings were steady. Minings improved during the early part of the week but were dull during the rest of the week. There was a general improvement on the last day and gains were recorded in most sections.

WALL STREET IN AIR MAIL WEEK

CONTINUED WEAKNESS IN MARKETS

RENEWED THREAT TO UTILITIES

By F. Rocke.

By Air Mail

Special for "INDIAN FINANCE"

Political factors continue to dominate the stock markets; and throughout the period under review Wall Street continued weak and prices reached new low figures for the year. The sharp break in cotton caused nervousness and Farm Equipment, Mail Order and Railroad Shares were lower. The slump in cotton was attributed to selling by foreign interests in the belief that Government would cease to advance loans to farmers and allow the small holdings to cultivate without any restriction.

The President in a message to Congress on March 12, renewed his demand that public utility holding companies should be dissolved after five years unless they were "able to justify themselves". This gave a momentum to the selling movement and practically all groups were sold in particular, Utilities, Rails and general Industrials. Oils were weak as the Utility Holding Company Bill raised the fear that the pipelines would be subjected to Federal regulations making them common carriers. The week closed with prices still on the downward trend.

On the Bond market Government issues were irregular. Chileans were at a time quoted higher Second-grade Utility and Rail issues were weak.

Rails were weak on the reports of poor earnings and the prospect of wage increases on April 1. The Railways in a petition have applied to the Government for an increase in the rates so as to be able to allow for wage increases from April 1. These were quoted a little higher in the latter portion of the week on the rumour that the Interstates Commerce Commission was likely to accede to the rate increase petition which was calculated to add between $30,000,000 and $40,000,000 to the industry's income.

Utilities have been the subject of the week. The Dow Jones Utility Index figure was at its lowest for all time. The President's determination to dissolve the Utility Companies which he described as "financial empires," was quite manifest in the message he sent to Congress on March 12. He condemned the protests of the companies as propaganda and expressed his opinion that these utility holding companies only watered their captial in order to disguise their financial malpractices. What is of importance to the investor is that the message contains a concession in that it promises a chance of survival to these companies which can prove to the satisfaction of the securities commission their value to the public interest. As the President has set his mind on it, it may be taken as certain that the Rayburn Bill will pass into the statute book in some from or other. But it will be worth while for an investor to pick those companies which are likely to benefit from the concession foreshadowed in the President's message.

Oil shares were lower owing to the fear that the new Holding Company Bill would compel the oil companies to dispose of their holdings in natural gas properties or submit to the same kind of regulation as utility holding companies.

An increase in crude oil production was recorded in the week ended March 9, according to the estimates of the American Petroleum Institute. The daily average production was 2,526,400 barrels compared with 2,473,850 barrels daily in the previous week.

Gasoline stocks on March 9 totalled 55,923,000 barrels against 55,654,000 barrels on March 2.

Steel mill activity was lower during the week; and according to the *Iron Age* was at 47.5 per cent. of capacity compared with 48.5 per cent. last week. The demand for the second quarter has not been so far good in addition to the decrease in demand from the automobile industry.

The report of the United States Steel Corporation for the year ended December 31, 1934, shows a net deficit before charging dividends $21,667,780 compared with that of $36,501,123 in the previous year. After payment of the Preference dividend, the total deficit was $28,873,000. No dividend has been paid on the Common shares. The excess of current assets over current liabilities has increased from $362,000,000 to $374,000,000.

The production of finished goods increased from 5,536,000 tons in 1933 to 6,005,000 tons in 1934 and the number of company's employees increased by 10 per cent.

The report of the Bethlehem Steel Corporation for the year ended December 31, 1934 shows net earnings of $550,571 compared with a loss in the previous year of $8,735,723.

Orders received during the year amounted to 168,000,000 tons compared with 120,000,000 tons in the previous year.

The high rate of activity in the automobile industry is maintained and according to a preliminary estimate of the Automobile Manufacturers' Association, production in February was 353,350 units, an increase of 17 per cent. over the production for January and 4.8 per cent. above the figures for February 1934.

The directors of the Chrysler Corporation have voted to redeem $30,150,000 of the outstanding 6 per cent. Dodge Brothers Debentures with a view of retiring these bonds (which mature in 1940) on May 1, the Chrysler Corporation has arranged a banking credit or $25,000,000 repayable at the rate of $5,000,000 annually. The balance will be found from the Corporation's own funds. The redemption will effect an annual saving in interest of $1,200,000 or 28 cents per share.

Loadings of revenue freight for the week ended March 2 was 604,600 cars. This represents an increase of 51,700 cars compared with the previous week, and an increase of 500 cars against the corresponding week of last year.

Investment Notes:—

The Consolidated Gas-Electric Light and Power Co. of Baltimore is the oldest operating company in the United States. The operating revenue for 1934 was 0.5 per cent. above that of 1933 and the net earnings showed an improvement of 2.8 per cent. at $5,877,319. After substracting the Preferred dividend, there was $4,718,392 available for common dividends against $4,559,649 in 1933. The yield is a little over 6 per cent. at the present price of the stock and but for the uncertainty regarding the effect of the Utility Holding Bill it is a good semi-speculative stock.

The International Business Machines Corporation manufactures many types of labour saving devices for offices out of which some are sold out and some hired out. The earnings have been steady and the common stock is one of the high-priced stocks in Wall Street.

In 1933, the Company continued to pay cash dividends at the rate of $1.50 quarterly and at the end of the year resumed stock dividends distributing 2 per cent. in this way. There are no debentures. In

(Continued on page 1160)

COMPANY REPORTS

BOWREAH COTTON MILLS CO., LD.

The Directors submit the Audited Accounts of the Company for the half-year ended 31st December 1934, which shows a net profit of ... ... Rs. 48,092 12 11
From this has to be deducted the debit balance brought forward from the last account namely ... ... Rs. 42,278 1 3

Which leaves a credit balance of ... ,, 5,814 11 8

to be carried forward to the next account.

Provision has been made for depreciation by a transfer of Rs. 50,000 from Renewals and Extensions Account.

An additional 75 looms for which there is space in the existing weaving shed, are now being installed.

During the half-year under review a slight improvement in trading conditions was experienced and a steady and sustained advance in price of raw materials encouraged buyers of both cotton and yarn to operate with considerably more freedom. Clearances were frequently on a more satisfactory scale and values also appreciated to some extent. Markets continued to be moderately active until about the end of the year, but enquiry for goods has since diminished appreciably and stocks of cotton have accumulated rapidly as a result of the decrease in offtake and the increase in night shift working by Mills in Bombay and other centres.

The outlook at the moment cannot be regarded with any degree of confidence for the rates which buyers are now prepared to pay are considerably below the cost to produce and no advance seems probable until such time an improved demand enables dealers to clear their present holdings.

V. H. MacCaw, G. L. Scott, M. A.—Hughes—Directors.
Kettlewell Bullen & Co., Ld.—*Managing Agents.*

Comparative statement of balance sheets for the last three consecutive half-years:—

BENGAL NAGPUR COTTON MILLS, LD.

The Directors beg to submit their Report and Accounts for the half-year ended 31st December, 1934.

The working for the half-year after allowing for Debenture Interest, Depreciation and Commission shows a profit of ... ... Rs. 37,124 11 0
To which has to be added the amount brought forward from last half-year ... ... ,, 18,573 6 3

Rs. 55,698 1 3

Which they recommend should be dealt with as under:—
In payment of a dividend on the Preference shares at the rate of 7 per cent. per annum, free of Income Tax ... Rs. 10,500 0 0
In payment of a dividend on the ordinary shares at the rate of 5% per annum free of income tax ... Rs. 22,500 0 0 33,000 0 0

Leaving to be carried forward ... Rs. 22,698 1 3

Trading conditions.—Improved demand and offtake continued throughout the half-year, and unsold stocks were further reduced. Cloth prices, however, failed to respond to the upward trend of cotton levels evidenced towards the close of the trading period. Subsequently both offtake and demand have been disappointing and the prospects for the coming half-year are uncertain.

BENGAL FLOUR MILLS CO., LD.

The Directors beg to submit the Audited Accounts for the half-year ended 31st December, 1934, showing a profit on Revenue Account of Rs. 15,049-12-8 and a balance at credit of profit and loss account of Rs. 52,820-15-7 with which they propose to deal as follows:—

To Depreciation ... ... Rs. 3,710 0 0
,, Dividend at 5 per cent. per annum ... ... ,, 30,000 0 0
,, Carry forward ... ... ,, 19,110 15 7

Total ... Rs. 52,820 15 7

There has been little change in general conditions during the period under review due mainly to the continued dumping of Karachi Flour and large imports of cheap Rangoon rice. Consequently Mills have continued to work short time and prices have been at a very unremunerative level.

KUMARDHUBI FIRECLAY AND SILICA WORKS

The Directors beg to submit the Audited Accounts for the year ended 31st December 1934.

The Revenue Account shows a profit of Rs. 96,380-12-3 and the Profit and Loss Account, including Rs. 6,557-5-10

brought forward from the previous year and allowing for Depreciation etc., shows a credit balance of Rs. 33,690-6-6 which we recommend should be dealt with as follows:—

In paying arrears of dividend for two years on the Preference shares at the rate of 7 per cent. per annum free of Income Tax (i.e., from the 1st July 1929, to 30th June 1931) absorbing	Rs.	28,000	0 0
In carrying forward	,,	5,690	6 6
Total ...	Rs.	33,690	6 6

The market for Fireclay products has shown an improvement during the period under review and is reflected in the trading results for the year.

S. A., Roberts, G. L. Scott, A. R. Dalal, D. C. Driver —Directors.

Bird & Co.—Managing Agents.

Balance Sheet as at 31st December 1934.

Liabilities—	Rs.

KUMARDHUBI ENGINEERING WORKS LD.

The Directors beg to submit the Audited Accounts for the year ended 30th November, 1934.

The Revenue Account shows a profit of Rs. 1,07,166-8-2 and the Profit and Loss Account, including the debit balance of Rs. 4,56,046-10-11 brought forward from the previous year and allowing for interest on Advances, Depereciation and Sundry Charges shows a debit balance of Rs. 5,70,415-14-9 which is being carried forward.

Trade conditions have remained depressed. The structural department has been quiet. The Foundry and Machine shop have been reorganised during the year and are ready to take advantage of any increased Government expenditure on Railways and other works.

S. A. Roberts, G. L. Scott—Directors.

Bird & Co.—*Managing Agents.*

Balance sheet as at 30th November, 1934.

EMPIRE FLOUR MILLS CO., LD.

The Directors beg to submit the Audited Accounts for the half-year ended 31st December, 1934, showing a profit on Revenue Account of Rs. 21,543-10-8 and a balance at credit of Profit and Loss Account of Rs. 41,637-8-3 with which they propose to deal as follows:—

To Block Depreciation	Rs.	5,250	A. P. 0 0
,, Dividend to the Bengal Flour Mill Company Limited at 64 per cent. per annum		18,750	0 0
,, Balance carried forward		17,637	0 0
Total Rs. ...		41,637	8 3

There has been little change in general conditions during the period under review due mainly to the continued dumping of Karachi flour and large imports of cheap Rangoon rice. Consequently Mills have continued to work short-time and prices have been at a very unremunerative level.

H. F. Bensley, Eric Studd, H. C. W. Bishop—Directors.

Balmer Lawrie & Co., Ld.—*Managing Agents.*

DUNBAR MILLS LD.

The Directors submit the Audited Accounts of the Company for the half-year ended 31st December, 1934, which show a net profit of Rs. 20,761-13-8. Deducting this from the debit balance brought forward from the last account, namely Rs. 66,651-3-9, there remains a debit balance to be carried forward to the next account of Rs. 45,889-6-1.

Provision has been made for depreciation by a transfer of Rs. 40,000 from Reserve Fund Account.

The addition to Block Account is comprised principally of equipment for the new weaving shed.

During the half-year under review a slight improvement in trading conditions was experienced and a steady sustained advance in price of raw materials encouraged buyers of both cloth and yarn to operate with considerably more freedom.

Clearances were consequently on a more satisfactory scale and values also appreciated to some extent. Markets continued to be moderately active until about the end of the year, but enquiry for goods has since diminished appreciably and stocks of cloth have accumulated rapidly as a result of the decrease in offtake and the increase in night-shift working by Mills in Bombay and other centres.

The outlook at the moment cannot be regarded with any degree of confidence for the rates which buyers are now prepared to pay are considerably below the cost to produce and no advance seems probable until such time as an improved demand enables dealers to clear their present holdings.

V. H. MacCaw, G. L. Scott, M. A. Huges—Directors.

Kettlewell Bullen & Co., Ld.—*Managing Agents.*

WALL STREET IN AIR MAIL WEEK

(*Continued from page 1130*)

the first ten months of the year earnings equalled $7.61 per share. At rather under 180 the stock is interesting to the conservative investor and though there are no chances of an increase in the cash dividend rate a return to the old stock dividend payments is likely.

The Curtis Publishing Company is the proprietor of a large number of magazines and periodicals and is largely dependent on advertising revenue. There was a reduction in the revenue owing to the depression but with the recovery it has increased. The preferred dividend was cut, but was restored to the full $7 towards the end of last year. On January 1 there were arrears of $8. At the price of 97½ the yield is well over 7 per cent. with a prospect of the $8 arrears thrown in. Among the preferred shares Curtis are attractive.

Business Pointers:—

Power output in the week ended March 9, totalled 1,724,431,000 kilowatt hours, an increase of 4·7 per cent. over the corresponding week of last year.

According to the Department of Commerce, exports of farm equipment during 1934 amounted in value to $21,553,000 compared with $12,211,000 in 1933 and with $10,548,000 in 1932.

Exports of raw material from the United States during January amounted in value to $55,810,000 compared with $54,520,000 in December. Exports of partly manufactured goods amounted to $27,200,000 against $30,310,000 in the previous month, while finished goods totalled $74,300,000 compared with $67,970,000 in December.

Brokers' loans increased $1,000,000 in the week ended March 13 to $732,000,000.

RESERVE BANK AND GILTEDGE

(*Continued from page 1121*)

On the strength of the technical position of Government's ways and means in the next fiscal year and on the strength of an apter machinery for open market operations in the new regime, we continue to be bullish, on a long view, in regard to giltedge.

This is our view from the standpoint of domestic factors.

International factors continue uncertain; but unless there is actually a war or a serious landslide in British Funds on account of the fabricated scare of a Labour Government, the intrinsic vitality of domestic factors is more than equal to the routine type of shocks from Europe.

Investor's Supplement

Vol. XV. No. 17 SATURDAY, APRIL 6, 1935 Price Re. 1

RESERVE BANK ACT AND 3½ PER CENT. PAPER

We understand that the Reserve Bank of India is, at the very start, faced with a poser. Does the Reserve Bank Act empower the Bank to buy a security like 3½ per cent. Paper which has no definite date of maturity ?

The markets both in Bombay and Calcutta have been greatly excited over this poser ; and we shall not be surprised to hear that the Bank authorities are themselves considerably worried over the exact interpretation of the relevant section. It is possible that the difficulty of interpretation is so great that legal opinion may be requisitioned.

It seems to us, however, that this is a matter not for legal, but business, interpretation.

The people who drafted the Bill knew little of business ; but real light will be thrown if the evidence which the bankers (particularly Sir Osborne Smith) gave before the Reserve Bank Select Committee be scrutinised. It was made clear in that evidence that the aim of the Bank in regard to investments was to secure maximum liquidity. It was also made clear that 3½ per cent. Paper had the freest market and must be reckoned the most liquid security. We may say, definitely and categorically, that it was never the intention that 3½ per cent. Paper must be ruled out of the portfolio of the Reserve Bank.

GILT EDGED EASIER AFTER SHARP RISE

OUTLOOK SLIGHTLY BRIGHTER

(Special Cable)

(From Gordon Cummings)

London, April 3.

Gilt Edge easier after sharp rise.
Industrials and Golds make mixed showing.
Base Metals actively strong.
Outlook slightly better.
Expect moderate recovery.

It is now, however, pointed out that Section 17 (8) prevents the Bank from buying 3½ per cent. Paper.

This section reads as under:

"The purchase and sale of securities of the Government of India or of a Local Government of any maturity or of such securities of a local authority in British India or of such States in India as may be specified in this behalf by the Governor-General in Council on the recommendation of the Central Board;

Provided that securities fully guaranteed as to principal and interest by the Government of India, a Local Government, a local authority of a State in India shall be deemed for the purposes of this clause to be securities of such Government, authority or State."

It is argued that securities *of any maturity* mean securities maturing on a definite date. If this had been the intention, the description used would have been "of any fixed maturity."

As it is, this section must really be read in conjunction with section 33 (3).

Section 33 deals with the assets of the Issue Department. Subsection (3) runs as under:

"The remainder of the assets shall be held in rupee coin, Government of India rupee securities of any maturity and such bills of exchange and promissory notes payable in British India as are eligible for purchase by the Bank under sub-clause (a) or sub-clause (b) of clause (2) of section 17 or under clause (1) of section 18:

Provided that the amount held in Government of India rupee securities shall not at any time exceed one-fourth of the total amount of the assets or fifty crores of rupees, whichever amount is greater, or, with the previous sanction of the Governor General in Council, such amount plus a sum of ten crores of rupees."

It is known that the Paper Currency Reserve contained a parcel of 3½ per cent. Paper and 3 per cent. Paper. It is obvious that these securities are to be transferred to the Issue Department of the Reserve Bank.

How is this transfer possible if the words "Government of India rupee securities of any maturity" in section 33 (3) should mean securities with a fixed maturity, that is to say, should exclude 3½ per cent. Paper.

Our interpretation is confirmed by the following telegram which, to our query, we have received from a well-known Bombay authority in these matters:

"Section 17 (8) should be read in conjunction with Sections 33 (3) and 35 intention legislature clear otherwise transfer Rupee securities in Currency Reserve would not be possible. Submit any maturity cannot mean any definite maturity.".

We also understand, from a phone message from the Western Capital, that the same view is held in other authoritative circules.

3½ per cent. Paper is *not irredeemable*. It is maturable on three months' notice by the Government.

If the lawyers say that such is not the interpretation of the section, we will say with Bumble that the law is an ass.

Anyway, the Reserve Bank and or the Government must do something in the immediate future to retrieve the position in the giltedge market. As soon as the Finance Member has the budget off his hands, he must give his attention to the New Loan planning. In the course of this month, the *pros* and *cons* of the New Loan must be discussed ; and the type of loan and its terms and conditions must be decided.

If the giltedge market continues in its present temper and mood, the New Loan, however adroitly

fashioned and however alluringly presented, must meet with a cold reception.

It will be necessary for the Fiance Member—necessary in his own interest—to do something to transform the temper and mood of the giltedge market.

He must do something. Quick. Energetic. And confidence-inspiring.

We believe, therefore, that succour to the market cannot be far-off. Nor will it be meagre.

The only succour which the market needs is the removal of the surplus stock of 3½ per cent. Paper which is now, perhaps, swollen to Rs. 3 crores. If this is removed, giltedge will once more witness bright days. If this is not done, we dread to think of the consequences.

The Reserve Bank has the power, the will, the ability, the resources and the obligation to do it. We hope, it will.

The Government have the power, the resources, and the obligation to do it. What they lacked was the will and correct perception. The new factor is the New Loan and the necessity it imposes on the Government to do it. We now think, they must.

INDIA :

CHEQUERED PAST ; BUT BRIGHT FUTURE

BRITISH INDIA CORPORATION

By "Watch-dog"

After the many prunings and re-castings to which the capital of the British India Corporation has been subjected since 1921, the Company makes, in its latest balance sheet, excellent showing. Shareholders in the past regime suffered much loss ; but the shareholders in the new regime stand, I believe, to make much gain.

The British India Corporation was the result of the fusion, as from January 1, 1920, of the following concerns:

(*a*) the Cawnpore Woollen Mills,
(*b*) the Cawnpore Cotton Mills,
(*c*) Empire Engineering Company,
(*d*) Cooper Allen and Company,
(*e*) the North West Tannery,
(*f*) the New Egerton Woollen Mills.

Of these, the Empire Engineering has been shut down ; the rest are thriving businesses, with their particular brand enjoying considerable repute in the Indian markets.

It is not necessary, for the purposes of this review, to discuss in detail the various schemes that have been put through, from time to time, for the reduction of capital. Suffice it to say that the present position is that the capital plan of the Corporation consists of Rs. 81 lakhs in 8 percent. cumulative preference shares of Rs. 100 each ; and Rs. 44.15 lakhs in ordinary shares of Rs. 1 each. The total capital is thus Rs. 125.12 lakhs.

It will be at once admitted that for a corporation which comprises a big-sized cottonmill, two big-sized woollen mills, one of the largest army boot and equipment factories in the world and one of the largest and most upto-date tanneries in the East, a capital of Rs. 1¼ crores is an extremely conservative proposition.

The Reserve Fund amounts to Rs. 20 lakhs. Other liabilities come to Rs. 56 lakhs.

On the assets side, land appears in the books at Rs. 2.95 lakhs ; buildings at Rs. 21.47 lakhs ; and plant and machinery at Rs. 15.69 lakhs. Inclusive of railway sidings etc., the net block comes to Rs. 40.44 lakhs.

It may be added that the gross expenditure on block inclusive of the original purchase price and additions thereafter, was Rs. 2.42 crores. The reduction made through the capital reconstruction plan and depreciation allocations have so far come to Rs. 2.02 crores. It will thus be seen that the mammoth concerns constituting the Corporation stand in the books at the extremely low figure of Rs. 40½ lakhs.

This means that the allocation for depreciation in future balance sheets need be only for small amounts. This is a factor which is of great importance in assessing the dividend-earning capacity of ordinary shares.

Liquid assets as at December 31, 1934, are very substantial. Stocks are valued at Rs. 62.97 lakhs. Stores and spare gear are Rs. 9.07 lakhs. Book debts are Rs. 20.70 lakhs. Loans and deposits are Rs. 7.45 lakhs. Advances come to Rs. 3.86 lakhs. Investments, which show a considerable appreciation at current market rates, stand in the books at Rs. 43.43 lakhs. Cash balance comes to Rs. 24.03 lakhs. Total liquid assets are thus no less than Rs. 171½ lakhs.

I have already stated that sundry liabilities come to Rs. 56 lakhs. Net liquid assets are, therefore, Rs. 115½ lakhs. In other words, the entire capital of the Company is more or less in an absolutely liquid form. This is truly an amazing position.

Turning to the profit and loss statement, the profit for 1934 was Rs. 18.06 lakhs. The carry forward from the previous account was Rs. 5.02 lakhs. The total sum available was thus Rs. 23.08 lakhs. Rs. 2½ lakhs is set apart for depreciation. Preference dividend for one and a half years absorbs Rs. 9.72 lakhs. Dividend of two annas per ordinary share of Rs. 1 absorbs Rs. 5.52 lakhs. The carry forward to next account is Rs. 5.34 lakhs.

Judging from the results of the other cotton mills in Cawnpore, and considering the prospects of the grant of protection to the Indian woollen industry, it is safe to assume that the profits for 1935 will be at least as much as those in 1934.

On this assumption, the preference dividend next year will require only Rs. 6.48 lakhs as no further arrears of dividend remain to be paid. This means that an additional Rs. 3.24 lakhs will be available for distribution on ordinary shares. This should enable the directors to increase the dividend by at least another anna per share ; or, perhaps, even by one and a half annas.

I must repeat that I have assumed that the profit in 1935 will be the same as the profit in 1934. But there is every chance of increased profits as the plant and machinery has been considerably improved. Besides, there is the possibility of protection to the woollen industry.

Even assuming that the profits remain the same, the dividend earned by ordinary shares will be three annas or possibly three and a half annas compared with two annas in 1934.

The present market value of the ordinary shares is roundabout Rs. 2¾. A dividend of three annas would work out to an yield of 7 per cent. tax free. An yield of three and a half annas would work out to 8¼ per cent.

There is, thus, the certainty of increased dividend in the next year. With a company placed on such a strong basis, with the block appearing at such a low valuation, with liquid assets so ample, with the prospects of business covered by the Corporation on a favourable basis, and with the certainty of increased dividend on ordinary shares on the results of the

working of 1935, the ordinary shares of British Indian Corporation seem to be an attractive investment.

The market at the present moment is under a dark cloud of gloom and despondency. It is the catastrophic fall in giltedge which has spread despair allround. But this cannot last long. Recovery is bound to take place in the near future. As and when recovery sets in, one of the shares that should show instantaneous response is the equity shares of British India Corporation.

INVESTMENT BREVITIES

I cannot understand why the shares of Cawnpore Sugar Works are quoting so low. They are now below Rs. 34. The dividend for 1934 was Rs. 3 per share, made up of Rs. 1 by way of *ad interim* dividend and Rs. 2 by way of final dividend. The dividend was free of income tax. A dividend of Rs. 3 on a share quoting Rs. 34 gives an yield of 8.8 per cent. tax free. It is, perhaps, one of the few instances where on a first-class share, so large an yield is forthcoming. The Cawnpore Sugar Works has two sugar factories, one distillery upcountry, and one refinery and distillery at Cawnpore. The Company has ample reserves and plentiful liquid assets. Its earning capacity is extremely satisfactory. In the light of these factors, this is one of the safest investment propositions which I can recommend.

It is quite possible that investors have been somewhat scared by the dividend policy pursued by Begg Sutherlands. The latter did great harm to themselves and their popularity with investors by the way in which they sought to write off the entire earthquake losses in one balance sheet. This factor was responsible for a jumpy dividend record. Investors know that Begg Sutherlands are one of the best managing agents for sugar companies. They have confidence in their management. They know that concerns under Begg Sutherland's control make substantial earnings. But there is an impression that the dividend policy is much too stingy. We would strongly suggest to Begg Sutherlands that they should now take steps, by the creation of dividend equalisation funds, to place dividends on a steady basis. If investors have an assurance in this regard, Cawnpore Sugars must be nearer Rs. 50 than Rs. 30.

* * *

Champaran Sugar is another likely proposition. The present quotation is roundabout Rs. 21. The last dividend was poor because of the earthquake losses being written off in that balance sheet. But the working of the current season must show substantial profits. The capital is small. The reserve position is extremely satisfactory. Dividend for the current year must be anything like 25 per cent. There is clearly a margin of ten points for rise in these shares.

* * *

At the time of writing, Reserve Bank shares are quoted in the neighbourhood of Rs. 20 premium. I have received considerable enquiries as to whether those who have taken up these shares should wait for higher prices or must sell out at current rates. I have also received few enquiries as to whether it will be advantageous to buy at the present rates. My own view is that the intrinsic value of the Reserve Bank shares is roundabout Rs. 125. Cautious purchases at present rates appear advisable. But I would not advise anyone to sell. Reserve Bank shares must not be made a speculative scrip. They are an investment good for holding. I must deprecate every attempt to create frenzied conditions in this counter.

* * *

The jute market is still suffering from indigestion. Every section has shown a considerable fall. Investors are in a most panicky mood. Market operators have suffered heavy losses. To meet these losses, they have had to sell whatever holdings in shares they might have had. This accounts for the continued selling pressure. Shrewd investors must be on the watch for the moment when the upward should start. For, start it must, sooner or later, sooner rather than later. The intrinsic position of jute mills continues the same as it was prior to the break in share prices. Nothing in the condition of mills has changed. There has been a change only in the market temper. When market sentiment undergoes a change towards optimism, there should be a good rebound in prices. Favourite counters like Howrah, Kamarhatty, Kanknarrah, Reliance, Fort Gloster, Champdany, National and Clive are worth picking up at the lower levels. Even if prices do not show much rise, they yield substantial dividends ; and you get good return on your money. Whether as speculation or as investment, jute mills shares roundabout current levels must appeal to the prudent operator.

* * *

Standard Wagons have suffered a catastrophic fall. I would not be surprised if they register as sensational rise. They are, I know, getting substantial orders in this year's allocation of wagons by the Railway Board.

Worth-While Investments :

BRITAIN :

RADIATION LIMITED.

By R. Gordon Cummings

Formed in June 1919, Radiation Limited is a holding company owning the entire issued capital of five of the leading companies manufacturing gas stoves, fires, lamps, etc. These subsidiary companies include amongst their productions a number of well-known patent cookers and fires, while they own a large number of up-to-date patents.

The present authorised capital is £5,000,000, of which £3,350,084 is issued in £1 shares, consisting of 1,087,525 6 per cent. cumulative preference and 2,262,559 ordinary. Up to 1926 the issued ordinary capital was only £1,545,583, but early in 1927 a 33-1/3 per cent. capital bonus was distributed, while at the same time further shares were issued.

Both preference and ordinary dividends are paid in April and October. In the case of the ordinary interim payments for the last few years have been 3⅛ per cent. followed by a final of 9⅜ per cent.

As shown in the following table, profits were little affected by the recent industrial depression. In fact, apart from one or two minor set-backs, there has been almost steady recovery during the last eight years ended December 31, 1934.

	Net profit after Tax £	Pref. Div. £	Ordinary percentage Earned	Paid	To Reserve £
1927	280,292	228,090	12.6	12½	Nil.
1928	279,651	227,449	12.6	12½	Nil.
1929	295,997	243,795	13.5	12½	Nil.
1930	295,292	244,722	14.0	12½	Nil.
1931	293,754	244,816	14.5	12½	Nil.
1932	288,785	239,847	14.1	12½	100,000
1933	299,965	251,026	14.8	12½	50,000
1934	325,340	274,770	15.6	A. 15	Nil.

A including 2½% bonus.

The above figures represent only the dividends received by the parent company from its holdings in subsidiaries. As pointed out later, the subsidiaries retained last year almost £100,000 of profits in their own accounts, so that actually the earnings of the whole group were much greater than disclosed in the parent company's annual report.

This company follows the excellent practice of giving a consolidated balance-sheet covering the affairs of the subsidiaries. The following two statements show the balance-sheet of the parent company at 31 December, 1934, together with comparative

figures for the last two years of the subsidiary companies' balance-sheets.

P. & L. Balance	238,707	138,923
Cost of Radiation investment and advances	3,802,078	3,732,584
Total ...	4,784,561	4,592,753

Dealing with the consolidated statement, 1934 profits not distributed by the subsidiaries amounted to £99,784. Over the last 16 years the subsidiaries have retained over £1,140,000 profits to strengthen their position and write off goodwill, patent rights, and various intangible assets, which in 1930 amounted to £901,724. These items have now been entirely eliminated, and, in view of the remarkably strong liquid position, the directors would be fully justified in distributing profits up to the hilt.

A simple calculation shows that earnings on Radiation ordinary capital for 1934 instead of being 15.6 per cent. were really 21.3 per cent. Taking the Radiation profit of £274,770 after meeting preference dividends, and adding £99,784 profits retained by subsidiaries, we get a total of £374,554 available on the ordinary capital. Adjusting income tax, this sum, as pointed out above, equals 21.3 per cent., compared with a distribution of 15 per cent.

Despite certain pessimism regarding increasing competition from the electrical industry, it is obvious from the directors' statement in the latest report that sales again expanded during the past year, that the outlook is far from unfavourable. The Board of Directors have steadily followed a policy of progressive expansion. For instance, during the past year many improvements in apparatus were introduced, but without increasing the selling prices. As increased value is given to the public, every endeavour is made to reduce manufacturing costs.

For 1934 the net preference dividend was covered over 6½ times by available profits of the parent company. It is not surprising, therefore, to find that the £1 shares yield only 4 per cent. at 30s. In the case of the ordinary, these have been marked down in price during the last few days owing to general market conditions. At the time of writing the shares can be obtained at 64s. to yield over 4.6 per cent. on last year's total distribution of 15 per cent. Both from the point of view of yield and prospects they are a most promising investment holding. Sooner or later the directors will adopt a more generous dividend policy.

BRITISH COMPANIES IN INDIA

MERCANTILE AND NATIONAL BANKS

By R. Gordon Cummings.

Two of the leading Indian Banks—*Mercantile Bank of India*, and *National Bank of India*—report increased profits for the year ended December 31, 1934. In the case of the *Mercantile Bank* profits for the past twelve months were £173,398, against £161,697 for 1933. Deducting £12,000 (£15,000 in 1933) allocation to officers' pension fund, the net balance is £161,398 (£146,697), equal to 16.4 per cent. (14.6 per cent.) on the paid-up capital. By a final payment of 6 per cent., the total dividend for the year on the A, B and C shares is again brought up to 12 per cent. ; £10,000 (£20,000) is written off premises account ; and £25,000, against nothing in 1933, is transferred to contingencies reserve ; leaving £172,830 to carry forward, compared with £172,432 brought in.

The 1934 profits compare with a recent high record of £257,663 earned in 1925. For a number of years up to 1930, annual dividends were 16 per cent., while over the five year period to 1929 average earnings on the paid-up capital, after allocations to pension fund, were 24½ per cent. per annum.

The main items in the 1934 balance-sheet, together with the comparable figures for 1933, are : —Cash and bullion £1,760,773 (£1,957,613), Government and other investments £6,107,952 (£5,968,124), bills receivable £1,837,611 (£1,699,898), and loans and advances £5,902,092 (£4,632,622). On the liabilities side, notes in circulation are up from £103,990 to £155,637, current, deposit and other accounts are £12,974,356 (£12,248,040), bills payable £537,746 (£416,628), and loans against security £450,000 (nil). Reserve fund is unchanged at £1,075,000, as also the paid-up capital at £1,050,000, comprising 30,000 A and 30,000 B shares of £25 each, £12½ paid-up, and 60,000 £5 C shares fully paid.

The A shares are entitled to a 5 per cent. cumulative preferential dividend and to participate equally with the B and C shares after the latter have to participate equally with the B and C shares after the latter have received 5 per cent. Current share quotations in London are :—A, 31 ; B, 31 ; C, 12⅓.

National Bank of India profits for 1934 come out at £460,309, against £450,783 in 1933. Once again £50,000 is appropriated to pension fund, but this time the dividend is only made up to 18 per cent., compared with 20 per cent. less tax for each of the three previous years. A sum of £50,000 is, however, written off property account, leaving the carry forward £309 higher at £250,099. As the interim dividend was lowered by 1 per cent. to 9 per cent. the reduced final comes as no surprise. Making allowance for the pension fund allocation net earnings on the £2,000,000 paid-up capital equalled 21.2 per cent. in 1934, against 20 per cent. in each of the two previous years.

The present results compare with a recent record of £541,098 earned in 1927. For several years to 1930 dividends were 20 per cent. tax free per annum with annual earnings at over 24 per cent. up to 1928.

Compared with 1933 each item of the assets, apart from bills, shows a decline, the principal changes in the balance-sheet being :—Cash and bullion £4,069,489 (£4,672,944), Indian Government rupee securities £5,109,764 (£5,585,774), British Government and other investments £9,522,178 (£9,788,374), bills £4,280,728 (£3,553,507), discounts,

loans, etc., £10,515,596 (£10,805,737), and acceptances £351,155 (£382,996). Amongst the liabilities, current, deposit, etc., accounts are £28,703,042 (£29,636,308), and bills payable £756,189 (£760,818), while the reserve fund remains at £2,200,000, and the paid-up capital at £2,000,000 in £25 shares, £12½ paid-up.

The shares are quoted at £44½.

IRRAWADDY FLOTILLA

This Glasgow controlled company, which owns and operates a fleet of vessels, flats and pantoons on the rivers of Burma, reports a big increase in profits during the year ended December 31st, 1934. After providing for all charges, depreciation, insurance and income tax, net profits come out at £113,473, an increase of £53,414 on 1933. To this figure is added £19,596 (£60,000 in 1933) from underwriting account, making with £31,461 (£41,002) brought forward from last year, a disposable balance of £164,530 (£161,061). For the third successive year a final dividend of 3½ per cent. tax free, again making 6 per cent. tax free for the year, is being paid on the £2,160,000 ordinary stock. As the year's distribution takes £129,600, there is a balance of £34,930 left to be carried forward.

Following a capital bonus of 50 per cent. in respect of 1927, profits for the ensuing two years were over £200,000 per annum, and dividends for each year were 10 per cent. tax free. In 1930 net earnings fell to £153,703, followed by a further sharp reduction to £36,867 in 1931.

As regards business in 1934 the directors state that a number of small vessels was added to the fleet, principally to replace inevitable depletion.

THE WEEK IN THE EXCHANGES

CALCUTTA STOCK EXCHANGE

(From our Correspondent)

Thursday evening,
April 4, 1935.

The slightly better tone which was in evidence in the Stock Exchange towards the close of the last week has not been maintained during the week under review. Government Securities although recovered considerably after their sharp fall during the last week-end have failed to maintain, their rise and at the time writing an all round easier feeling prevailed. Jute Mills shares following the weakness of the commodity markets and in sympathy with Government Securities have also ruled easier. Cottons remained dull and uninteresting while Coals showed no material change. Among Industrials there were no outstanding features and in several instances a further set-back in values was registered. Public utility companies' shares were quiet with sellers predominating, while no support was forthcoming in Engineering Companies shares and Sugars with the exception of one or two were general on offer. Teas continued quiet with only a small business passing.

Government Securities.—During the last week-end 3½ per cent. Government Paper touched the lowest point of Rs. 87-10 and since then some recovery was made owing to better London advices presumably in view of the friendly Anglo German conversation in Berlin. On Monday 'Paper' opened at Rs. 89 and again a wide fluctuation was recorded the highest point touched being Rs. 90-9 and the lowest Rs. 89-10. On Tuesday again the rate moved upto Rs. 91 on the rumour that the Reserve Bank will soon continue open market operation. On Wednesday the market opened with buyers at Rs. 91-4 owing to further support forthcoming from London in view of the rise of 3½ per cent. Sterling Loan upto £93-5. On Thursday, the market ruled easier and sellers predominated and as a result Paper sagged to Rs. 90-2. At the time of writing however the tone is rather uncertain.

As result of the weakness in 'Paper' 3½ Loan 1947-50 and 4 per cent. Loan 1960-70 have suffered severely and at the time of writing the quotations are no better than Rs. 100-8 and Rs. 103-4 respectively. 5 per cent. Loan 1945-55 also receded to Rs. 115-8 and 3 per cent. Loan 1941 to Rs. 100-5.

Only a limited business was reported in Medium and Short-dated Loans without much fluctuations in rates. The Bank rate remained unchanged at 3½ per cent.

Fixed Interest Bearing Securities.—The demand for (Pref.) shares appears to have abated for the time being and in several instances, sellers appeared, where there were buyers a few days ago. Among Jute Mills issues there are sellers of Alliance (Pref.) at Rs. 125; Bally (Pref.) at Rs. 141; Howrah 'A' (Pref.) at Rs. 137; Lawrence (Pref.) at Rs. 145 and Northbrook at the same figure. Hastings (Pref.) on the other hand, remained fairly steady at Rs. 120. Among other (Pref.) shares, Allahabad Bank (Pref.) was marked at Rs. 132 and New Victoria Cotton (Pref.) at Rs. 4-10, Burrakur Coal (Pref.) recorded a deal at Rs. 126. Bengal Telephone (Pref.) eased off further to Rs. 14-8 and Burn & Co. (6 per cent. Pref.) to Rs. 111 from Rs. 114. Indian Standard Wagon (Pref.) on the other hand, improved to Rs. 120 from Rs. 115. B. I. Corporation (Pref.) changed hands at Rs. 140; Titaghur Paper (Pref.) (Rs. 40 paid up) at Rs. 63 and Bengal Assam Steamships (Pref.) at Rs. 80.

Only two deals were reported in Joint Stock Companies' debentures though enquiry for first class issues continued. 7 per cent. (1919-35) Gohpur Tea was marked at Rs. 100 and 7 per cent. (1922-52) Nuddea Jute Mills at Rs. 110. There was no enquiry for Calcutta Port Trust and Municipal issues. Rangoon Port Trust, however, was on request but no business was reported owing to absence of sellers.

Other Investment Stocks.—Imperial Bank's shares remained steady at Rs. 1530 for the fully paid up issues and at Rs. 380 for Contributories. Central Bank's shares were quietly steady at Rs. 35-4. A fairly large business was reported in Reserve Bank's shares and the rate fluctuated between Rs. 118 and Rs. 121.

Among Insurance companies, only two deals were reported. A small lot of National Indian Life Insurance shares changed hands at Rs. 350 while Triton Insurance improved further to Rs. 233 cum dividend.

Light Railways' section remained rather neglected. Among guaranteed issues, Katakhal Lala Bazar changed hands at Rs. 92-9 while among others a small lot of Arrah-Sasaram was mentioned at Rs. 61. Howrah Amta was marked at Rs. 102 and Shahdra (Delhi) Saharanpore at Rs. 128.

Among other transport companies, Calcutta Tramways (Ordy.) was dealt in at Rs. 19 while India General Navigation & Railways receded further to Rs. 109.

Cottons.—Dull conditions have obtained in this section and only a small business was reported. Bengal Nagpur (Ordy.) was marked at Rs. 15-4 and

in view of the low level, this particular stock appears to be cheap. Kesoram (Ordy.) was quoted at Rs. 3-14.

Coals.—The feature of this section, has been the revival of enquiry for Equitable (Ordy.) which from a quotation of Rs. 35-8 steadily marked up to Rs. 38-12, although at the time of writing the rate is slightly easier at Rs. 38 on profit-taking. Amalgamated remained unchanged at Rs. 21-12 ; and Bengal kept steady at the decline at Rs. 257. Burrakur (Ordy.) was makred at Rs. 12-12, Bokaro & Ramghur at Rs. 8-2, Hurriladih at Rs. 14-12 ; New Manbhum at Rs. 63 ; Pench Valley at Rs. 49-4 ; Raneegunge at Rs. 5-4 ; Rewa at Rs. 14-4 ; Sendra at Rs. 13 ; South Karanpur at Rs. 5-4 and Standard at Rs. 29-12. Talcher on the publication of its report receded to Rs. 1-6.

Jutes.—In sympathy with Government Securities, Jute Mills shares opened steady on Monday with Howrahs at Rs. 59-2 and Kamarhattys at Rs. 580 and as the session progressed owing to further support from 'Paper' rates moved at to Rs. 59-4 and Rs. 595 respectively for Howrahs and Kamarhattys. Hessian market however did not give any support which on the other hand ruled easier owing to substantial increase of stock at the end of March which was quite contrary to market expectation.

At the time of writing the tendency of the market was rather easier with Howrahs come back to Rs. 58-13 and Kamarhattys to Rs. 583.

Among other rupee 10/- denominations, Clives are now quoted at Rs. 34-4, Birla at Rs. 16-4, Hukumchands at Rs. 14-8, Hooghly at Rs. 61-12, Nationals at Rs. 24-4, Presidencies at Rs. 5-4 and Reliance at Rs. 77.

Among higher priced stocks, Anglo-India are now quoted at Rs. 515 ; Auckland at Rs. 248-8 ; Barnagore at Rs. 185 ; Bally at Rs. 240 ; Champadanys at Rs. 200 ; Delta at Rs. 390 ; Fort William at Rs. 353 ; Fort Gloster at Rs. 645 ; Gourepore at Rs. 724 ; Ganges at Rs. 347 ; India at Rs. 425 ; Kanknarrah at Rs. 501 ; Lansdowne at Rs. 192 ; Nuddea at Rs. 62 and Union at Rs. 543.

Although the commodity markets ruled easier at the moment and Jute mills shares are following the trend of prices of 'Paper', the immediate outlook of this section must be regarded as quite satisfactory and with the approach of dividend time for March closing we do not see further setback in values. On the other hand the Investors and operators should do well to pick up shares like Anglo India, Barnagore, Champdany, Delta, Fort William, Gourepore, India, Kanknarrah, Kamarhatty, Lansdowne, Nuddea and Union at the current prices.

Electricals.—The enquiry for Public Utility companies shares appears to have died down and with the exception of United Provinces Electric shares for which there are buyers at Rs. 163 sellers predominated. Benares Electrics were on offer at Rs. 15. Cuttack Electrics at Rs. 9 ; Dacca Electrics at Rs. 18-8 and Mirzapore at Rs. 7.

Engineering.—Engineering companies shares attracted very little attention of the market. Arthur Butler (Ordy.) changed hands at Rs. 11-4 ; Bengal Iron was easier at Rs. 3-13. Burn & Co., (Ordy.) receeded to Rs. 272 from a quotation of Rs. 301. Indian Iron & Steel was quiet at Rs. 6-4 and Indian Standard Wagon (Ordy.) at Rs. 52-8.

Miscellaneous.—No feature of outstanding interest was revealed in this section. B. I. Corpn. (Ordy.) was marked at Rs. 2-12, Indian Cables at Rs. 3-15 British Ceylon Corporation (Ordy.) recorded a deal at Rs. 10. Titaghur Paper (Ordy.) was marked down to Rs. 20-8 and Midnapore Zamindary (Ordy.) to Rs. 65 from a quotation of Rs. 69. Bisra Stone and Lime, on the other hand advanced to Rs. 75-8 thus making a rise of about 18 points over the last tested rate. Reliance Firebricks were easier at Rs. 11 on profit taking—Burma Corporation remained steady at Rs. 6-2 and Delhi Flour at Rs. 5-12.

Sugars.—This section was rather erratic while there are a few buyers for Balrampur round about Rs. 22. Sellers predominated in Cawnpore, Buland, Raza and Samastipur. Murree Brewery was also on offer at Rs. 190. There are sellers of Punjab at Rs. 304 and Carew at Rs. 19-8.

Teas.—Only four deals were reported in this section. Dauracherra changed hands at Rs. 11-4 ; Oodlabari at Rs. 34 ; Rannegunge at Rs. 4-2 ; and Singell at Rs. 84. London Market is keeping very steady and some enquiry for shares is expected locally before long.

Friday Evening.

Government Securities.—3½ per cent. Government Paper opened this morning at Rs. 89-14 and as the session advanced the price eased off to Rs. 87-10 due to lack of support. 4 per cent. Loan (1960-70) changed hands at Rs. 103-3 and 5 per cent. Loan (1940-43) at Rs. 108-2. The tone is quiet at the close.

Jutes.—A further setback in share values was registered today and prices are substantially below yesterday's ruling rates. Howrahs after opening at Rs. 59 were marked down sharply to Rs. 57-12 owing to 'bear' pressure and lack of outside support but recovered again to Rs. 58 at the close. Kamarhattys were also moved back to Rs. 575. Anglo India receded to Rs. 505 while Fort William kept steady at Rs. 354 ; Bally at Rs. 240. The market closed quiet but steady.

Miscellaneous.—Imperial Bank's shares eased off to Rs. 1515 for the fully paid up issues and contributories changed hands at Rs. 380. Dunbar (Ordy.) marked down to Rs. 102-8.

There was no change to report in Coal shares. Equitables (Ordy.) changed hands at Rs. 38-4.

Among others, Indian Standard Wagon (Ordy.) was better at Rs. 55 while Titaghur Paper was quoted down to Rs. 20-4.

BOMBAY TELEPHONE CO., LTD.

NOTICE.

Notice is hereby given that at the 13th Ordinary General Meeting of the Company held on the 29th March, 1935, a Final Dividend of Rs. 2-8 per share equal to 5 per cent. free of Income Tax for the year ended 31st December, 1934, was declared on all issued shares of the Company payable to shareholders appearing on the Register as on the 22nd day of March, 1935 and that such dividend will be paid by warrant posted to such shareholders on the 30th day of March, 1935.

R. H. PARKER,
General Manager and Secretary.

Bombay, 29th March, 1935.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From Our Correspondent)

April 5, 1935.

Money Market.—Money was easy with intercall fluctuating between 1½ to 2 per cent.

Exchange.—The market was quiet with Banks selling T. T. at 1s. 6 3/32d. for Ready ; 1s. 6 1/16d. for April ; 1s. 6 1/32d. for May-June ; and 1s. 6d. for July-December.

Govt. Securities.—After the fall of last week, the Rupee Securities market showed some signs of improvement and 3½ per cent. Paper was done as high as Rs. 91-5. But later, on heavy liquidation Rupee Security market tumbled down again as low as Rs. 87-15 at the close. 1945/55 were lower at

Rs. 114-12 ; 1960/70 easier at Rs. 103 ; 1941 at Rs. 100-1 ; 1947/50 at Rs. 100-12 ; 1943 at Rs. 104-14 ; 1955/60 at Rs. 110 ; 1935 at Rs. 100/10 ; 1939/44 at Rs. 107-6 ; 1940/43 at Rs. 108-6 ; 1938/40 at Rs. 107/10 ; Bombay Development at Rs. 101-10.

Shares.—These have witnessed very sensational falls in all sections of market particularly in Steels and Hydro Electrics on account of persistent weakness in Securities and heavy liquidation of holdings partly attributed to distress selling.

Textiles.—In sympathy with other sections, leading scrips in this section, have lost a considerable number of points at close. Bombay Dyeings closed at Rs. 862-8 ; Central India at Rs. 315 ; Century at Rs. 275 ; Colaba at Rs. 127-8 ; Gokak at Rs. 181-4 ; Kohinoor at Rs. 187-8 ; New Great at Rs. 142-8 ; Swadeshi at Rs. 199-6.

Hydro Electrics.—This group had a severe fall at close with Powers down by 100 points at Rs. 1,446-4 ; Andhras were down by about 115 points at Rs. 1,542-8 and Hydros at Rs. 160.

Since fall is overdone, we feel that Hydros and Andhras are very attractive for investment at current levels. The earning of Tata Power Company for the month of March is higher than February.

Iron & Steel.—Steel Shares have given a rude shock by precipitous fall in Ordinaries and Deferreds. Ordinaries and Deferreds which were around Rs. 144 and Rs. 650 in the beginning of the week, on account of panicky selling, were done as low as Rs. 125 and Rs. 540 though closed slightly better at Rs. 128-4 and Rs. 565 respectively.

As mentioned last week, we feel that there is no need for this kind of panic stricken feeling since the position of Iron and Steel Industry is exceedingly good and we hear prices of steel goods have maintained the same rates as were ruling a few weeks ago, inspite of Belgium devaluing its currency by the extent of 28 per cent. Further the production figures for the month of March have been encouraging. Production figures in pig iron are 78,900 tons ; steel ingots 88,170 tons ; finished steel 54,400 tons. We feel that the fall has been overdone and therefore, think this is an opportunity for genuine investors to begin picking up Ordinaries and Deferreds round about current levels. Tata Second Preferences have also suffered a fall and closed at Rs. 160.

Cements.—With the exception of Bundis, all other cement shares followed the general trend of the market. Bundis after being done as high as Rs. 47 closed at Rs. 45. There is a possibility of this company paying an increased dividend as well as distributing one bonus share for every four shares held. We, therefore, feel that there is good scope for capital appreciation in Bundis. Indian Cement Company, for the year ending December 31, 1934, has made a profit of Rs. 464,360. After allocating Rs. 100,000 for Depreciation and Rs. 100,000 for Reserve for replacement of obsolete machinery and Rs. 9,000 for bonus for staff, the Directors have recommended a dividend of Rs. 16 per share, free of Income Tax, *i.e.*, 10 per cent. per annum. The Company's capital has been reduced from Rs. 60,00,000 to Rs. 46,33,260 on and from 24th November, 1934.

Gwalior closed at Rs. 111-4 ; Indian at Rs. 377-8 ; Katni Deferred at Rs. 1,470 ; Katni Ordinary at Rs. 371-4 ; Okha at Rs. 221-4 ; Punjab Ordinary at Rs. 24-12 ; Shahabad at Rs. 392-8 ; and United at Rs. 81.

Miscellaneous.—Possibility of Holland following the footsteps of Belgium by devaluing its currency and also the general weakness in the market contributed to heavy fall in Bombay Burmas and Belapur Sugars. Belapurs were down by 50 points and closed at Rs. 267-8 ; Bombay Burmahs about 50 to 60 points at Rs. 342-8. Petrols have sunk lower to Rs. 3 and Telephones to Rs. 107. Trams were down to Rs. 152-8 ; Constructions were lower at Rs. 73.

Banks & Insurance.—This section in no way fared better than others. Imperial fully paids were considerably lower at Rs. 1,465 and partly paid at Rs. 377-8 ; Bank of Indias at Rs. 114 compared to Rs. 121 in the beginning of the week. Barodas closed at Rs. 55 ; Centrals at Rs. 34-6 and Unions at Rs. 5-3.

Oriental Life was steady at Rs. 4,300 ; New Indias lower at Rs. 41-12 ; Vulcans closed at Rs. 6.

A CORRECTION

We regret that in the last week's report from Bombay, a mistake has crept in. On column of page 1126, it was mentioned that "the Governor General-in-Council has no powers to increase or decrease the duties in any emergency of this kind under Steel Protection Act of 1934." It is obvious that the negative is out of place as it can hardly fit in in the context.

MADRAS STOCK EXCHANGE

(*By Wire*)

(From Our Correspondent)

Madras, April 5.

The securities market was erratic during the period under review owing to bad political news and the nervousness on the part of holders. A heavy slump was witnessed about the close of last week. Paper at one time touched Rs. 88-8 whilst 1960-70 loan was quoted as low as Rs. 102-8 sellers. Excepting Paper, business in the others was practically at a standstill. In the absence of buyers this market still appears to be holding a considerable stock of Paper and 1945/55 loan. Owing to rumours of a rise in the Imperial Bank of India rate, the demand for short and medium dated loans was negligible. While the rumour has proved groundless, tightness of money explains the listlessness displayed in the giltedged section. Mysore loans have been practically unsaleable during the week. The giltedge market is not likely to regain a healthy appearance until the political situation in Europe settles down and more definite news is available about the Imperial Bank of India rate. The preference share market was dull with sellers of Spencer "B" preferences pressing the market around Rs. 12-8.

Public utilities.—These were in fair request with West Coast Electrics done at par. Vellores were in keen demand around Rs. 13¼ with no sellers whatsoever in the market. Rangoon Telephones were done at Rs. 13-8 and Madras Telephones at Rs. 21.

Mills.—These shares were erratic following the course of raw cotton. Deals included Buckingham and Carnatics at Rs. 206 and Cambodias at Rs. 14 Cum dividend. Showing loss of As. 6 Sitarams were marked at Rs. 60.

Cements and Sugars.—These were dull. Cement shares on balance showed a loss whilst amongst sugars, India sugars slumped from the previous level of Rs. 9-8 to Rs. 8 with further sellers out. Several holders hope that the company will issue a statement explaining the position of the company. Deccan Sugars declared a final dividend of 20 per cent. making 30 per cent. an increase of 10 per cent. over the previous year. The shares were dealt in at Rs. 305 cum dividend and appear cheap.

Plantation.—The planting section was neglected.

Miscellaneous.—This section was neglected. The week closed in all sections with an uncertain undertone.

LONDON STOCK EXCHANGE

The stock exchange was not quite free from the effects of the European political situation and the difficulties of the "gold bloc." Giltedge was inactive during the early part of the week, but there was some sharp recovery on Tuesday, 3½ per cent. Indian Stock 1931 advancing from 92½ to 93 ; 4½ per cent. 1950—55 from 113½ to 114 ; 2½ per cent. British Consols from 85½ to 86¼ and 3½ per cent., Conversion Loan from 105½ to 106¼. These were inactive again on the

POLITICAL DEVELOPMENTS PLAY HAVOC IN STOCK MARKETS

PRECAUTIONARY MARKING DOWN BY JOBBERS.

By R. Gordon Cummings.

By Air Mail.

Special for "INDIAN FINANCE"

London, March 26.

During the week under review Stock Markets have again been over-shadowed by political and currency uncertainties. Up to Thursday last most sections, apart from gilt-edged, which developed decided weakness on the general uncertainty and some irresponsible selling, maintained a firm appearance with only fractional changes up or down on Monday's closing prices. On some closing of speculative commitments and a decided lack of public support there was an all round decline in practically every market during the course of Friday. Accordingly, the past Account finished on a distinctly dull note.

Despite little improvement in business the new Account has opened with a brighter appearance. It remains to be seen, however, whether the present firmness is merely "a flash in the pan" or the commencement of sustained but steady recovery. All will depend on the outcome of the various political discussions and developments now in progress in Germany, France, Italy and Belgium. Certain operators not wanting in courage are buying moderate lines of first class stocks on the view that the foreign political outlook is more hopeful. Their courage deserves to be rewarded.

Amongst British Funds, *2½ per cent. Consols* close at 85¼ after being lower, while *3 per cent. Conversion Stock* and *3 per cent. War Loan* have recovered to the common price of 105½. India Stocks are in places firmer after earlier dullness.

In the foreign market, Belgian issues have weakened on the political developments in that country. Japanese loans are lower on balance. Brazilian stocks have made a mixed showing, but German loans close firmer.

After increasing activity at higher prices on the relatively satisfactory traffics showing a smaller total decrease of £25,000, Home Rails have lost the greater part of recent gains on fresh uncertainty as to the likelihood of the Companies' rating assessments not being reduced. The recent decision in favour of the Southern Railway is to be the subject of an appeal to the House of Lords.

Amongst industrials there have been, apart from Aircraft shares, no upward movements, although in most instances prices at the close are, fortunately, higher than on Friday evening. *Imperial Chemicals* are 36s. 6d., *Dunlops* 47s., *Imperial Tobacco* 131s., *British American Tobacco* 111s. 6d., *Courtaulds* 49s. 6d. and *Boots Drug* 47s. One fears of increasing competition should Belgium leave the gold standard. Brick shares, under the lead *of London Brick* which are down to 77s., have been weak. *Ford Motors* at 31s. have not responded to the resumption of dividends, with a payment of 5 per cent. after a lapse of four years.

The Iron, Goal and Steel section finishes firm after earlier uncertainty on possible Belgian developments discussed below. *Stewarts and Lloyds* deferred are 29s. 3d., *United Steel* 25s. 9d. and *Staveley Coal* 38s. 3d.

A particularly bright feature has been an increased demand for sugar shares on the firmness of the commodity. *Tate and Lyle* are 100s., *Reynolds Brothers* 26s. and *Illovo Sugar* 36s.

Practically without exception South African gold shares are lower than a week ago. If obtainable at 41s. *African and European* Investment, together with *Simmer and Jack* 11s. 6d., *Elerksdorp* 6s. 3d. and *Kentan Gold* 13s. 6d. should be worth picking up. Of the Indian mining shares *Champion Reef* are 38s., *Mysore* 22s., *Nundydroog* 57s. and *Ooregum* 12s. 9d. ex dividend. After earlier firmness West Africans close dull, but Australian gold shares are somewhat firmer. *Commonwealth Mining* have recovered to 11s. 6d. The Company is to issue 500,000 shares in the proportion of one new share at 8/0 for every seven shares now held. For the first time on record the production price of gold has been fixed for March at 146s. an ounce—an increase of 4s. on the price for February.

In the base metal sections the tone is much brighter on the sharp recovery yesterday in the prices of all metals. *Burma Corporation* have been outstanding with a rise to 9s. 3d. Copper shares are all higher on the likelihood that restriction of output will soon become an accomplished fact. Tin is the only section which has not responded to the recovery in the price of the metal. On consideration of the good results for the past year *De Beers* have risen sharply.

Oil shares are somewhat firmer following earlier uncertainty. Official dealings have recommenced in *Mexican* and *Canadian Eagles* at around the common price of 4s. each.

A steadier tendency has been seen in rubber shares on a slight recovery to 5 3/32d. in the price of the commodity. It is expected that the restriction scheme will be tightened up in the very near future. Teas are hesitant.

Politics and Stock Markets.

I have already pointed out in my opening paragraphs that political developments have played havoc with stock markets during the past week. Fortunately, prices have not been lowered so much from a flood of selling as from precautionary marking down by jobbers on an almost complete absence of business. So far as I can ascertain there has been little serious selling; and if the comments of one of my jobber friends are to be believed, the jobbers are doing very little business. Even the bears have had little courage to "sell short."

Until confidence in the future definitely returns there is not going to be much business.

In my opinion too much is being made of the German armament plans. It has been known for some considerable time that Germany had an unofficial army, so what is the difference between making it official and trying to hide an obvious fact. Coming as it did on top of other developments the official announcement has unsettled both speculators and investors. Until the political air is cleared and the Budget is matter of the past, there is little likelihood of even moderate activity returning to stock markets.

I have repeatedly advised readers to hold on to first class stocks and not to be scared into hasty selling. I am sure that my confidence in recovery will be justified over the next few months.

Profitable Gilt edged Switches.

Despite the recent sharp fluctuations in the prices of gilt-edged stocks, the long-term outlook is far from unfavourable. For reasons already advanced in previous notes, I am confident that money rates will remain low for a considerable time. In fact, the

tendency over the next year or so may be for a further reduction.

Under the circumstances investors can now take a longer view and buy low interest stocks with more confidence. Below I give a table showing the flat and redemption yields offered on certain high interest bearing stocks redeemable within the next few years, and the similar yields on some longer-dated lower interest issues. A perusal of the table shows that investors with confidence in interest rates remaining low for some years to come can, by making suitable exchanges, ensure a higher average income over a long period than they would obtain by holding their present high interest stocks until redemption, and then probably having to accept a 2½ per cent. or 3 per cent. or even lower rated stock in exchange.

Stock.	Redemption.	Price.	Yield. Flat. £.	s.	d.	Redemption. £.	s.	d.
Conversion 5% ...	1944-64.	123.	4	2	6	2	8	6
Conversion 4½% ...	1940-44.	112¾.	4	0	6	2	2	3
Conversion 3½% ...	1961or after.	105½.	3	6	4	3	3	4
Conversion 3% ...	1948-53.	105½.	2	17	0	2	10	2
War Loan 3½% ...	195 or after.	105½.	3	7	1	3	3	3
India 5%	1942-47.	116½.	4	6	9	2	13	6
India 4%	1948-53.	109.	3	14	1	3	5	6
London C.C 5% ...	1940-60.	115¼.	4	8	0	2	5	6
Australia 3¼% ...	1956-61.	97½.	3	8	0	3	9	0
South Africa 3% ...	1954-64,	99¾.	3	0	6	3	0	6
Victoria 3% ...	1929-49.	98¼.	3	2	0	3	5	0
London C. C. 2¾% ...	1960-70.	97¼.	2	16	6	3	17	0

The redemption yield is calculated on the basis that each stock will be redeemed on the earliest of the dates given under the heading "Redemption."

It is obviously worth while for a holder of 5 per cent. Conversion Loan, or London County Council 5 per cent. stock, bought at par, to take his profit and switch into any of the last four named issues.

Tariffs and Belgium.

It now appears reasonably certain that Belgium will have to leave the gold bloc. She will be forced into this course mainly in order to protect her home industries. Until Great Britain instituted her present tariff system Belgium was a large exporter of a number of products to this country, but should she leave the gold standard, with a consequent reduction in the value of the belga, her competitive position will be vastly improved. Hence, British industries, such as iron and steel, brick manufacturing and glass manufacturing, will be effected unless the Government increase the present tariffs.

Accordingly, we are likely to see some weakness in iron and steel, brick and glass shares, until the position is settled one way or the other.

On the long-term outlook I still pin faith in the leading iron and steel shares. Purchases of *United Steel Companies, Stewarts and Lloyds, Baldwins,* and *Hadfields* ordinary shares can be made with every confidence of seeing capital appreciation by the year end. Holders of leading brick shares such as *London Brick Company and Forders* should not sell at present depressed prices. It is obvious that the British Government will not permit of rapidly progressing trades being unduly affected by competition from abroad. The tariff on iron and steel imports has just been increased from 33-1/3 per cent. to 50 per cent., and the same course will, if necessary, be adopted in the case of other goods.

A Low Priced Speculation.

In the course of some recent investigations into the merits of shares in which there is not a very active market, I took the trouble of analysing the prospects of *Antwerp Oil Wharves*, a company providing storage and distributive services for petrol, vegetable and mineral oils, whale oil, etc., near Antwerp in Belgium. The issued capital is the modest one of £175,000, and until December, 1934, it consisted entirely of 5s. ordinary shares. Recently, however, a reorganisation was carried through whereby the old ordinary shares were split into preference and ordinary shares, with the result that there is now in issue £52,500 in 10s. 6 per cent. cumulative preference and £122,500, in 5s. ordinary shares.

Since the company was formed in 1928 no dividends have been paid, although profits have been earned in recent years. In fact, the latter have steadily increased from £580 for the year to September 30, 1931, to £4,883 for 1933-34. The last balance sheet showed fixed assets £162,613, and liquid assets exceeding creditors, etc., by £6,664. There was outstanding, however, £17,963 preliminary expenses not written off, but against this item reserves and undivided profits totalled £12,240. The position is thus reasonably strong.

In future 6 per cent. on the preference capital will require £2,441 net per annum. As profits for last year were twice this amount the shares are a promising investment at current price of 9s. 6d. The 5s. ordinary have good speculative possibilities at 1s. 3d., particularly as turnover should now be improving, while if Belgium leaves the gold standard this should increase, and losses on exchange—costing £650 last year—should be reduced. My own advice is to buy equal numbers of the preference and ordinary shares—one preference and one ordinary will cost 10s. 9d.—as by this means a good yield will be obtained, together with prospects of capital accretion in the case of the ordinary.

Associated Portland Cement.

According to the full report now to hand comparable profits of *Associated Portland Cement Manufacturers* have come out better than the preliminary figures indicated. For the year to December 31, 1934, the net figure, after allowing £25,000 extra for depreciation, is £531,491, or £145,139 more than for 1933. From the 1934 profits, £42,752 is, however, deducted for writing down investments in subsidiaries. After allowing for the increase of 3 per cent. to 10 per cent. in the dividend, £1,239 is added to undivided profits, making these £171,819. Principal changes in the balance-sheet comprise a rise of £376,374 in advances to subsidiaries, and a net reduction of £352,480 in fixed assets. Despite an increased volume of sales in both home and foreign markets selling prices in both instances declined. The increased profits were only obtained through a reduction in costs. At 43s. the £1 units are a promising lock-up.

Industrial Prosperity Continues !

Practically without cessation the flood of good annual reports continues. The past week has seen a further big batch of satisfactory announcements, but owing to pressure of space I can only deal with the most important of these, which are :—

Hoffman Manufacturing, producers of ball and roller bearings, etc., net profits for 1934 were £85,944, an increase of £33,779 on 1933. After paying 10 per cent. (7½ per cent.) on the £250,000 ordinary capital,

£10,000 (nil) is added to reserve and the carry forward increased by £19,069 to £69,597. For the past year earnings on the £1 ordinary shares were 25 per cent., against 7.8 per cent. in 1933, while the yield at 42s. 6d. is 4¾ per cent. without allowing for the dividend included in the price.

Cerebos, manufacturers of table salt and other specialities, made profits for the year to November 30, 1934, £283,514, including £14,733 (nil) from sale of investments, against £226,976 in 1932/33. As a year ago, £50,000 is placed to reserve, but the dividend on £750,000 ordinary capital is higher at 40 per cent. less tax, against 30 per cent. tax free. Despite earnings of 49 per cent. the £1 shares are fairly valued at current price of £9⅝.

Salt Union, which owns various salt manufacturing businesses and a controlling interest in Mersey Power, reports profits of £175,983 (£165,138) for 1934. Dividend on the £800,000 ordinary capital is again 9 per cent., £30,000 (same) is transferred to contingency reserve, and £3,983 added to the carry forward. Earnings for 1934 were 14.4 per cent., against 12.9 per cent. in 1933. My previous recommendation of the shares, now 37s. ex. dividend, is thus fully justified by these results, which were obtained in the face of increased competition from foreign importations of salt.

Before charging directors fees (£3,806 in 1933) profits of *Winterbottom Book Cloth,* bleachers, dyers and book cloth manufacturers, were £221,696 for 1934, against £167,176 in 1933. Although earnings for 1934 on the £1,497,150 ordinary capital were 12.6 per cent. the total dividend and bonus is only increased by 2 per cent. to 10 per cent. The £1 shares are not overvalued at 46s.

Of the excellent electric supply earnings statements published this week, one of the most gratifying is that of *Scottish Power,* which shows profits of £300,844 for 1934, compared with £269,366 in 1933. Allowing for dividends on the further capital issued during last year, earnings are sufficient to pay 5½ per cent. on the ordinary capital, again making 8 per cent. for the twelve months. The £1 ordinary yield 4 per cent. at 40s.

Entertainment and Luxury Trades.

Coming to the entertainment, luxury and retail trades several reports amply demonstrate that the improvement in the basic trades of the country is increasing the spending power of the public.

On the entertainments side *Provincial Cinematograph Theatres,* which operates or controls 114 theatres, cinemas, etc., throughout Great Britain, and is controlled by Gaumont British Picture Corporation, despite intensive competition, recovered some leeway during the year to January 31, 1935, net profits, after providing £91,000 (£84,000) depreciation, being £23,564 higher at £344,054. As for a number of years past, 15 per cent. is again paid on the £500,000 ordinary capital, £65,000 (£42,856) is added to general reserve, and the carry forward is increased by £1,553 to £122,834. Earnings on the 10s. ordinary shares, held by the controlling company, were 23.5 per cent.

Gaumont-British Picture Corporation, which has interests in a number of other film producing and theatre companies, is again paying a 3 per cent. interim dividend on the ordinary capital, while the other leading concern in the industry—*Associated British Picture Corporation*—is distributing 4 per cent. interim on account of the year ending March 31. Despite these satisfactory announcements Gaumont 10s. ordinary at 11s. and Associated British 5s. ordinary at 7s. are speculative in view of the present intensive competition between these two groups.

Upsons, boot and shoe retailers, report a sharp increase in profits from £108,403 in 1933 to £129,884 for the year to December 31, 1934. The dividend is raised by 1 per cent. to 12 per cent., earnings on the £425,000 ordinary capital being 21.9 per cent., against 15.7 per cent. in 1933. At 43s. the £1 shares give the attractive yield of 5½ per cent.

Although *Maple and Company,* the furnishers and general stores, made profits of £196,231 for the year to January 31, 1935, against £187,802 in 1933/34, the dividend on the £1,800,000 ordinary capital is again restricted to 5 per cent. The £1 ordinary units are reasonably valued at 22s.

Unfortunately my gloomy forecast of a few weeks ago on the outlook for the wholesale warehouse companies is again confirmed by the 1934 results of *Faudels* which disclose a loss of £10,933, compared with £8,842 loss in 1933.

A Promising Lock up.

On an earlier occasion I drew attention to the lock-up merits of sound Investment Trust equity shares and stocks. Satisfactory reports still continue to be published; and amongst those recently issued that of *Friars Investment Trust* is worth consideration, not only from the point of view of increased revenue but lower investment depreciation. For the twelve months ended February 15th last net revenue at £21,328 is £4,277 higher than in 1933/34. Despite this improvement and an increase from 3 per cent. to 3.6 per cent. in earnings on the £750,000 ordinary capital, the dividend is restricted to 2½ per cent., the same rate as paid for the previous year. After writing £5,000 off investments, £8,202 is carried forward, compared with £6,734 brought in.

Investments appearing in the balance-sheet at £1,291,819 had a market value of £1,013,284 at February 15th last, thus showing depreciation of £278,535, or 21.56 per cent. on book cost. A year ago the corresponding rate of depreciation was 27.41 per cent. Deducting profits carried forward from this year's figure, net depreciation is £270,000, giving the £1 ordinary shares a break-up value of about 12s. 9d. each, as against their current market price of 13s. As the yield is 3⅞ per cent. they will easily pay for their keep until profits show sufficient expansion to increase the dividend. In 1931 the distribution was 5½ per cent.

Diamonds, Gold and Copper.

One of the luxury trades most seriously hit by the industrial depression was the diamond industry. At one time there did not seem to be much hope of any early recovery, but recently a more optimistic outlook has been taken in view of the obvious expansion in business. Within the last few days the five most important African diamond mining companies have published their annual accounts. In each case big increases in profits are disclosed—a sure sign that recovery is taking place in a tangible form.

The most important statement is that of *De Beers Consolidated Mines*—the leading diamond producer in the world. This shows net profits of £768,683 for 1934, against £128,589 in 1933. After adding £905,866 brought forward, the disposable balance is £1,674,549. From this sum £636,237 is transferred to reserve, making it up to £2,000,000 while £1,038,312 is carried forward. No dividend is to be paid on the £2,000,000 of 40 per cent. cumulative preference capital, thus leaving four years arrears, equal to £3,200,000, outstanding from January 1931.

In the case of the other four companies, all of which De Beers is interested in, only one—*Cape Coast Exploration*—is paying a dividend despite much improved profits.

It is generally expected that some scheme will be put forward in the near future for dealing with the dividend arrears on De Beers preference shares, which are of the denomination of £2 10s. each. Hence, in the light of this hope and the improving prospects they are a healthy speculation at £1⅛.

A cheaper and safer method of taking an interest in the diamond industry can, however, be obtained through a purchase of *Anglo-American Corporation*

of South Africa 10s. shares, now quoted at 29s. 3d. This leading finance company, which holds large interests in De Beers and other diamond companies, has a widespread portfolio of investments in established and developing gold-mining properties, Rhodesian copper companies and other concerns. For the year 1934 profits, before charging taxation, expanded by no less than £358,757 to £829,235. For the first time since 1929 a dividend—10 per cent.—is paid on the £2,000,000 ordinary capital, and after providing for tax and directors' fees, together with two and one half years' dividend arrears of the preferred stock, £600,000 is added to reserve and £139,265 (£482,030 in 1933) carried forward.

Profits of £320,875, against £390,491 are reported by *Nundydroog Mines*. A balance of £10,113 (£10,253) is carried forward after meeting all expenses and paying 67½ per cent. (85 per cent.) on the above capital.

Turning to copper, prospects of a satisfactory settlement of the production problem now look reasonably certain. The Conference of leading producers at present being held in New York is, judging by all reports, proceeding in a smooth and amicable manner. In view of the strong position of the Rhodesian companies, they should receive favourable consideration in any restriction scheme. I have previously drawn attention to the lock-up merits of *Rhodesian Selection Trust, Roan Antelope* and the shares of other concerns. It certainly looks as though my faith is to be justified by steadily rising prices over the next few months. On the long-term view it would be difficult to find better speculations.

Market Pointers.

Bombay Gas Company is again paying a 4½ per cent. final dividend on the £300,000 issued ordinary capital. With the 3½ per cent. interim already distributed this makes a total of 8 per cent. for 1934, or the same rate as paid for the previous four years. At 31s. the £1 shares offer the attractive yield of 5⅓ per cent.

The report for 1934 of *British Thomson-Houston*, which is controlled by Associated Electrical Industries, not only shows a sharp improvement in profits, but states that orders on hand at December 31 last were substantially in excess of those at the end of 1933. Owing to the general dullness *Associated Electrical Industries* ordinary have receded to 24s. 9d. ex. dividend—a bargain price.

The full report of *Associated Electrical* shows net profits of £325,238 for 1934, thus confirming my estimate of a fortnight ago. Of more importance, however, is the directors' statements that output deeming 1934 was higher than in previous years and that orders in hand are considerably greater than a year ago.

On some dissatisfaction with the February index of receipts, *Cables and Wireless* 5½ per cent. preference stock has fallen to 82¼. Actually the index figure of 74.4 is an improvement on the January return of 73.2, although it is slightly below that of 74.7 in February 1934, which month, apart from December, was the best of last year. Holders of the preference stock should certainly not sell.

In my cable of March 21, I advised a purchase of *British Celanese* 7½ per cent. cumulative participating second preference shares, now 15s. During the last few days there has been some very knowledgeable buying of these shares, on which dividends are outstanding from April 1930, thus representing arrears of 7s. 6d. gross. Once the dividend arrears on the first preference capital, outstanding from October 1931, are cleared off, I am confident that some scheme will be put forward to deal with the second preference arrears. I anticipate, in view of the brighter prospects, that the first preference arrears all be cleared off by the end of this year. If this proves to be correct the second preference look ridiculously cheap at current price.

The full report of *Vickers*, the large steel, armaments, shipbuilding, etc., company, declares that net profits have risen from £543,364 in 1933 to £613,261 in 1934. After meeting preference dividends and paying 6 per cent., against 4 per cent., on the £4,015,161 ordinary capital the carry forward is raised by over £4,000 to £228,222. Accounts of Vickers-Armstrongs, one of the principal subsidiaries, disclose a greater increase in profits. Against £188,413 for 1933 the net figure for 1934 is almost doubled at £357,534. The latter figure does not, however, include any dividend on the investment in English Steel corporation, which concern utilised a 1934 profit of £258,893 to clear off previously accumulated losses and to carry forward to the current year a small credit balance.

THE BOURSES IN AIR MAIL WEEK

Paris.

Political factors were responsible for the dull session on the Bourse throughout the week under review. Prices were generally on the downward trend. The reintroduction of conscription by Germany accentuated the downward trend but it was by no means precipitous. The fall was later on checked by sellers coming in. The week closed dull with the continued uncertainty in the political atmosphere. Business was confined to reducing commitments by buyers and sellers.

On the Parquet, Rentes and other Government issues were irregular. Industrials registered lower levels. Among Foreign Bonds 5½ per cent. German Young Loan declined sharply to 380 and then to 366.

Internationals were hesitant. Suez Canals were quoted on the last day at 18,645 and Royal Dutch Petroleums at 13,870.

On the Coulisse, Diamond Shares closed easy. The Gold Mining group remained without any definite tendency in the absence of fresh support. Oils were weak.

Berlin.

Almost all the markets were firm throughout the week under review excepting on the last day. German armament and kindred shares showed good advances on the introduction of military conscription. Banks and Industrials also improved. Farben-industries were quoted at one time at 144, Siemens at 143¾, Dynamit Nobles at 83¾ and Fords at 57, Rayons and Shippings were better.

On the last day of the week most sections were weak. Banks and Industrials declined but electricals were better. Rayons were dull and Minings improved. improved.

CALCUTTA

WALL STREET IN AIR MAIL WEEK

BARGAIN HUNTING AND SHORT COVERING

UTILITIES AND RAILS BETTER

By F. Rocke.

By Air Mail.

Special for "INDIAN FINANCE"

The Rayburn Bill more than the European unrest controlled the activities on the Stock Market and the week under review has been rather dull and business turnover small. Business news has not been quite encouraging enough. Prices fluctuated within narrow limits and there were occasional rallies owing to bargain hunting and short covering. Utilities behaved better in the expectation that the Rayburn Bill would be modified in some form or other before it became law. Rails were better in the hope of rate increases and wage reductions. American Telephone and Telegraph fell by 2⅛ points on the news that President Roosevelt approved a $75,000 congressional appropriation for an investigatioon into the affairs of the company. Wall Street was inactive on the last day, price changes being mostly fractional. The uncertain sentiment continues.

On the Bond Market Government issues were irregular. Belgians were weak owing to the talks of devaluation. German issues fell sharply and Italians also were weak. The lower grade rail issues declined.

Rail issues were better this week anticipating rate increases and wage reductions. Revenue freight car loadings are not impressive. A Senate investigation into railroad refinancing is urged by the Missouri Pacific Bondholders' Committee. He alleges that previous reorganisations have been for the benefit of bankers and speculative groups and not of the investor.

The Senate was informed on March 21 that the Missouri Pacific reorganisation plan involved a fresh loan of $75,000,000, from the R. F. C. to place the system on a sure financial basis. The Administration's final intentions in regard to the railroads are not yet known and Mr. Eastman, the Co-ordinator is more in favour of reorganisation than mere temporary relief. The Retirement Act has increased costs and rate reductions have depressed income. The United States railroads have failed to earn fixed charges in 1934 by $35,000,000.

The utilities have been the centre of attraction during the the past week. They were steadier and registered even some advances. There is keen speculation with regard to the passage of the Rayburn Bill and everybody hopes that the Bill should be modified before it was passed. It appears likely that the Supreme Court will uphold Judge Grubb's ruling against certain of the Tennesse Valley Authority's activities. A number of preminent individualists and representatives of utility managements attacked the Rayburn Bill before the House Commerce Committee on March 20. On the last day of the week rumours were again current that the Administration intended to modify its utility policy in an effort to restore Confidence to the business community. No official statement to this effect was forthcoming, but Professor Raymand Moley and other conservative advisers indicated that the Rayburn Bill would be modified so as to permit present utility systems to remain intact unless the Securities and Exchange Commission found that dissolution in particular cases would be positively in the public interest.

Columbia Gas and Electric Corporation 1934, net earnings were 25 c. per share against 51 c. in 1933. Cash on December 31, totalled $19,500,000 and there were no bank loans. The Company is afraid of the disastrous effects of the Rayburn Bill on its natural Gas operations.

According to the *Iron Age* steel mill activity for the week was at 47 per cent. of activity compared with 47.5 per cent. last week. The price of heavy melting steel scrap in Pittsburg has been reduced by 25c. per ton. Fresh orders are not forthcoming as they were expected. New buying is extremely light. The outlook is uncertain.

The automobile industry are pursuing their programme of increased production. Ford Motors have declared a dividend of 5 per cent. less tax for the year ended December 31, 1934 on the ordinary stock. This is the first payment since 10 per cent. less tax was distributed for 1930. The 4,800,000 fully paid ordinary £1 shares were converted into stock last July. Net profits for 1933 after tax depreciation, obsolescence etc. amounted to £742,216 Compared with a net loss of £725,917 for 1932.

Net profits of Vauxshall Motors for 1934, show a substantial advance and a 75 per cent. dividend on the ordinary shares after a lapse since 1919 is likely. After providing for depreciation and tax, a total of £651,994 is available for dividend against £461,427 a year ago an increase of over £190,000. Considerable additions have been made to the factory.

An increase in crude oil production was recorded in the week ended March 16, according to the estimates of the American Petroleum Institute. The daily average production was 2,608,400 barrels, compared with 2,526,400 barrels daily in the previous week.

Gasoline stocks on March 16, totalled 57,406,300 barrels against 55, 923,000 barrels on March 9.

Business Pointers.

The Power out put last week totalled 1,728,323,000 kilowatt hours, an increase of 4.7 per cent. over the corresponding week last year and the highest figure recorded for the week since 1930. The final January figures show an advance of 9.6 per cent. over January 1934.

The foreign trade figures for January show that exports totalled $176,222,000 as compared with $172,220.000 for January 1934, while imports totalled $167,002,000 against $135,703,000.

The value of building contracts awarded for all classes of construction in the 37 Eastern States during February was $75,080,000 compared with $99,770,000 in January.

Loadings of revenue freight for the week ended March totalled 587,300 cars. This represents a decrease of 17,300 cars compared with the previous week, a decrease of 25,100 cars against the corresponding week of last year.

The world stocks of refined copper decreased in February by 17,000,000 lbs. to 954,000,000 lbs. American stocks decreased 21,000,000 lbs. while foreign stocks rose by 4,000,000 lbs. The apparent world consumption totalled 245,500,000 lbs. of which the United States accounted for 79,500,000 lbs.

Broker's loans decreased $69,000,000 in the week ended March 20, to $663,000,000.

COMPANY REPORTS

PUTNIBAREE TEA ASSOCIATION, LD.

The Directors beg to submit the audited accounts for 1934, disclosing a profit of Rs. 10,677-9-6 on the season's working. On transfer of that sum to Profit and Loss Account, and after sundry adjustments, there remains a credit balance of Rs. 7,213-9-5 to be carried forward to 1935.

Crop.—Outturn was restricted in terms of the agreement among producers and amounted to 1,289 maunds as compared with 1263 maunds in 1933.

The average selling price is annas 7 and pies 11 per lb. as against annas 7 and pies 8 per lb. in the previous year.

Management.—Mr. R. Pitcairn continues as Superintendent.

Planted area.—An area of 43.56 acres, which has been uncultivated for a number of years, has been written off leaving an area of 37.69 acres under cultivation.

Estimates for 1935 provide for a crop of 1,275 maunds at an outlay of Rs. 40,183 including Inland Freight and Sale Charges.

Duncan Brothers & Co., Ltd.—*Managing Agents.*

NEW RING MILL CO., LD.

The Directors submit the Audited Accounts of the Company for the half-year ended 31st December, 1934 which show a loss of	Rs.	3,746 15 4
From this has to be deducted the credit balance brought forward from the last account, namely ...	,,	1,551 1 4
Leaving a debit balance to be carried forward to the next account of	,,	2,195 14 0

During the period under review following an appreciable advance in the price of raw material somewhat better trading conditions were temporarily witnessed. The Improvement, however, proved short-lived for at the close of the half-year market commenced to weaken and the outlook at the moment cannot be regarded with any degree of confidence. In the circumstances, the Company's mill remained closed throughout the half-year.

V. H. MacCaw, G. L. Scott, M. A. Hughes—Directors.

Kettlewell Bullen & Co., Ltd.—*Managing Agents.*

GIELLE TEA COMPANY LIMITED.

Report for the season ended December, 1934.

The Restricted Scheme has not achieved the results anticipated for the Industry generally. Darjeeling Gardens with relatively small crops, have secured the least benefit, being adversely affected also by the general levelling of prices which has been an unfortunate feature of the market during the year.

Crop.—Export quota alloted for the season under the Tea Control Act was by 6.7 per cent, of the best crop basis, and the allowance for internal consumption was again limited to 12 per cent of that figure under the voluntary crop Restricted Scheme of the Indian Tea Association. This gave a total of 76.7 per cent of the best year crop which, for the company, amounted to 161,416 lbs. made up as follows:—

For export	...	136,162 lbs.
For internal sale	...	25,254 ,,

Additional Production Rights were, however, purchased and the final crop amounted to 165,416 lbs.

Gross average obtained for export and internal sale were 10.91 annas and 6.74 annas respectively, compared with 12.32 annas and 9.19 annas for last year; and the nett average for the whole crop was 9.85 annas per lb. including the proceeds of export Rights sold against 11.39 annas in 1933; total sales of tea and export Rights realising Rs. 1,01,829-14-4.

Notwithstanding a fine standard of plucking and careful manufacture, quality was rather disappointing, second flush and autumnal teas not possessing much flavour. This was common to all Darjeeling Teas, being attributable to climatic conditions and scarcity of "Green Fly". *Expenditure*—Comparative figures are given below:—

		Rs. A. P. Estimated expenditure	Rs. A. P. Actual expenditure
Estate	...	61,700 0 0	60,936 9 9
Calcutta	...	31,800 0 0	30,774 9 2
Total	...	93,500 0 0	91,711 2 7

(Working cost per lb. of tea)

		1933	1934
Estate	...	5.61 annas	5.89 annas.
Calcutta	...	3.28 ,,	2.98 ,,
Total	...	8.89 ,,	8.87 ,,

The cost of repairing of damage caused by the earthquake of January 1934, amounted to Rs. 1,337-10-7, the whole of which has been charged to Revenue. Garden expenditure shows an increase on 1933, due largely to the presence of the Assistant who was away for much of the previous year.

Revenue Account.—After providing for staff commission there is a credit balance of Rs. 9,382-7-9 transferred from this account to the Profit and Loss Account.

Profit and Loss Account.—The net profit for the year, after adjustments, is Rs. 10,613-12-9 and with the amount brought forward from 1933 there remains a final balance on this account of Rs. 18,369-1-3 which, is proposed to deal with as follows:—

	Rs. A. P.
Pay the Preference Dividend for 1934 ...	12,000 0 0
Carry forward to 1935	6,369 1 3
Total ...	18,369 1 3

Estimate for 1935:—

Actual Restriction Allotments for 1935 are not yet known but for the purpose of the following figures have taken a crop of 75 per cent. of the best year basis:—

Crop	1,973 maunds.
Estate expenditure	Rs. 59,400 0 0
Calcutta	,, 29,500 0 0
Total ...	Rs. 88,900 0 0

Every effort continues to be made to keep expenditure as low as possible.

H. F. Bensly, G. G. Macgregor, B. C. Studd—Directors.
Davenport & Company—Secretaries.

Comparative statement of balance sheets for the last three years:—

HULDIBARI TEA ASSOCIATION, LD.

Report for the season ended December, 1934.

Crop.—Export quota allotted for the season under the Tea Control Act was 64.7 per cent. of the best crop basis and tea made for internal consumption was again limited to 12 per cent. of that figure under the voluntary crop Restriction scheme of the Indian Tea Association. This gave a total of 76.7 per cent. of the best year crop, which for this company amounted to 600,729 lbs. made up as follows:—

	lbs.
For Export	506,743
For Internal Sale	93,986

Additional Production Rights were, however, purchased and the final crop amounted to 634,640 lbs. As it was found advantageous during the season to sell a larger proportion of Tea for local consumption and dispose of the corresponding Export Rights, 88,317 lbs. of Export Rights were sold.

Gross averages obtained for Export and Internal Sale were 8.91 annas and 5.18 annas respectively compared with 9.15 annas and 4.91 annas for last year, and the nett average for the whole crop was 8.08 annas per pound, including the proceeds of Export Rights sold, against 8.17 annas in 1933, total sales of Tea and Export Rights realizing Rs. 3,20,707-9-0.

A fine standard of plucking was maintained and quality was well up to average, the lower prices realized being due entirely to market conditions.

Expenditure.—Comparative figures are given below:—

	Estimated Expenditure Rs. A. P.	Actual Expenditure Rs. A. P.
Estate ...	1,20,000 0 0	1,15,909 7 3
Calcutta ...	87,500 0 0	90,190 13 6
Total ...	2,07,500 0 0	2,06,100 4 9

(Working cost of lb. per pound)

	1933	1934
Estate ...	2.93 annas	2.92 annas.
Calcutta ...	2.16 ,,	2.27 ,,
Total ...	5.09 ,,	5.19 ,,

Considerable savings were again found possible on garden expenditure, and the excess of actual Calcutta expenditure over the estimate is accounted for entirely by the purchase of Production Rights, which allowed of the full crop being marketed to advantage.

Revenue Account—shows a surplus of Rs. 1,05,806-7-3 transferred to the Profit and Loss Account.

Profit and Loss Account.—There is a net profit of Rs. 90,049-8-1 for the year, after adjustments, and after allowing for the interim dividend of 5 per cent. declared payable on the 9th November, 1934, there remains a final balance at the credit of the Account of Rs. 80,812-1-10, which the Managing Agents propose to deal with as follows:—

	Rs. A. P.
Pay a Final Dividend of 7½ per cent. (making 12½% for the year)	41,500 0 0
Transfer to General Reserve Account (bringing this up to Rs. 2,00,000)	15,000 0 0
Carry forward to 1935	24,562 1 10
Total ...	80,812 1 10

Estimate for 1935.—Actual Restriction allotments for 1935 are not et known, but for the purpose of the following figures the Managing Agents have taken a crop of 75 per cent. of the best year basis:—

Crop	7,343 maunds.
Estate Expenditure ...	Rs. 1,21,800 0 0
Calcutta	Rs. 85,500 0 0
Total ...	Rs. 2,07,300 0 0

The cost of completely re-conditioning one out-door withering shed is allowed for in these estimates, this work being essential; and in all other directions every effort continues to be made to keep expenditure as low as possible.

Davenport & Co., Ld.—Managing Agents.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Money was somewhat easy in the early part of the week, but fully firmed up towards the finish. At one time, interbank call loans changed hands from 2 per cent. to 2¼ per cent. The rate at the close was 3¼ per cent., borrowers. That after weeks of suspension of Treasury Bills and after uninterrupted sales of sterling by the market to the Government over the whole month, money continues to be in such demand makes it clear that what is causing all the stringency is the lock-up of a good part of the surplus funds of banks in loans on government securities to market operators and jobbers. If there had been a bill market in India, cessation of Treasury Bills would have made itself felt immediately. As it is, what corresponds to the bill market in the Indian financial world, is the loans that are made by banks on call against government securities. The position in this regard remains unchanged. It is true that there have been considerable sales of securities over the past four weeks. Prices have collapsed. All the same, the total floating stock in the market has not diminished to any extent. All that has happened is that there has been a change in the holders of the securities. But the banks continue to be the source from which finance for these large holdings has to be secured. The only way in which money market can be relieved of the stringency, is for the Government or the Reserve Bank to undertake purchases of securities from the open market. In the absence of such purchases, both the money market and the giltedge market are in extreme agony.

The giltedge market has tumbled down like a house of cards. There are wild fluctuations in prices. On days there has been a fall of as much as 2½ per cent. 3½ per cent. Rupee Paper opened to-day at Rs. 90, went down to Rs. 88, steadied up to Rs. 88-12, plunged headlong to Rs. 87-10, and is quoting roundabout Rs. 88 at the time of writing. This has spread havoc over all the markets. Tata steel deferreds and ordinary shares have declined by Rs. 60 and Rs. 15 respectively in one day. Howrahs have gone down to Rs. 57-8. To say that it is now a regime of panic would be a mild description. Professionals feel that it is worth the while to sell anything and everything. It is a most cheerless market and everyone is asking what exactly can be the motive or intention or purpose of the Government in refusing to lend that little support which would make all the difference to the market. The Government cannot plead that they have no resources. They cannot plead that they have not the requisite power to undertake such operations. In their own interest, they will have to be coming into the market and giving a real strength. The day of the New Loan issue cannot be far off. The Finance Member will have shortly to discuss proposals of the loan. If, sooner or later, the Finance Member himself, for his own plans, has to undertake action that will have the effect of strengthening giltedge prices, why not take such action now, when it is needed and when it will have the most salutary effect? Why does he not realise that delay means that the purchases that he will have to make ultimately will be far larger. The Finance Member has not one friend left in the entire business world ; no one has a good word to say about his policy. His earlier loans redounded to his credit ; he has now completely smashed up his credit. He will not find it an easy job to woo investors for his new loan. It is the most suicidal tactics.

The centre of interest in this regard has now shifted from the Finance Member to the Governor of the Reserve Bank. There has been considerable speculation in financial circles as to whether the Reserve Bank Act gives the power to the Bank to purchase a security like 3½ per cent. Rupee Paper which is popularly understood as an irredeemable scrip. This question is discussed at length in the Investor's Supplement. Suffice it to say in this context that the view of *Indian Finance*—a view shared by authoritative people in Bombay and in Calcutta—is that the Reserve Bank has certainly the power under the Act to hold 3½ per cent. Paper both in the Issue Department and the Banking Department. If so, it is really a golden opportunity for the Reserve Bank to be able to buy a

desirable scrip like 3½ per cent. Paper at prices well below Rs. 90. By buying Paper for, say, Rs. 2 crores, the Bank will be doing good to itself and to the market. It will be the best investment it could make under the circumstances. It will take off the market just that superflous stock which has been causing all this serious landslide. For our part, we believe that the Reserve Bank authorities are sure to enter the market early next week and give much-needed relief. Even assuming that they do not, there is every reason to hope that they will be able to persuade the Finance Member that, in the interest of his own New Loan, he should rectify the technical position in the market. The Reserve Bank is now in a position to offer an ultimatum to the Finance Member. Its Governor may well say to Sir James Grigg that unless the cause of the present debacle is removed, the Bank itself can do nothing for the success of the New Loan. We hope that, either on its own account or on account of the Government, the Reserve Bank will shortly be able to enter the market and carry out open market operations with the maximum vigour and effectiveness.

Meantime, we are not able to give the assurance to the suffering investors that the lowest levels have been reached. So long as the money market has to finance the heavy loans on securities, money will remain tight. So long as there is this excess of stock amongst professionals, every bearish factor is sure to have exaggerated effect. In all conscience, there is no dearth of bearish factors. The European situation is far from reassuring. One is almost afraid to open his daily paper in the morning. It is some alarm signal or other, from one or other of the European countries. At home, an unhealthy bull position had been built up in most sections. If prices had kept soaring, these scrips would have passed into the hands of the *bona fide* investor. But, with the break in prices each fall in prices has accelerated the momentum of the fall. As we explained in an earlier issue, a good part of the business in the market is done on a margin basis. Margins that have been considered safe in normal conditions have been wiped off in a week's trading. Brokers ask for bigger margins; bankers in their turn are reluctant lenders and impose onerous conditions. All these factors have brought about conditions in

(*Continued on page iii*)

LLOYDS BANK LIMITED
INCORPORATED IN ENGLAND 1677

SERVICE

For more than sixty years Lloyds Bank has maintained its reputation for courtesy, attention and efficiency in keeping the accounts of some hundreds of thousands of private individuals, companies and firms.

It has taken a prominent part in encouraging the development of payment by cheque, until to-day the possession of a banking account should be the rule rather than the exception.

Branches in the East:

(*Continued from page 1163*)

stabilisation. There is first of all sterling, the authorities for which have no manner of commitments in regard to its ultimate value. Then there are two such currencies as the dollar and the Belga, for which scope for fresh depreciation has been reserved. The war of the exchanges can, therefore be said to be only entering a new phase.

So far as sterling is concerned, it has been pointed out formerly in these columns that the recovery from the slump of February only means that sterling is again set for a fall. Opinion in England seems to show no divergence on the question of the future trend of sterling. Professor Gregory, speaking in Air Mail week, observed that the course of sterling during the next twelve months must be definitely downwards. The fall, which occurred in February, was arrested and reversed by the fears that were being entertained in regard to the belga. Now that the Belgian currency has been devalued, there can be no flight of capital from Belgium to cause strength in sterling. The other seriously unsettled currency is that of Switzerland. Of the rest of the members of the gold bloc, Italy has shown definite preference for the system that has enabled Germany to preserve the fiction of a gold standard without any of its serious disabilities. If the authorities in Italy continue in their present aversion for devaluation, they might go further on the path of exchange control and postpone a crisis indefinitely. Holland and Spain might choose the less heroic path of devaluation. But the prospects of sterling would depend predominantly on the policy pursued by France. One would suppose that France will own up the lesson of the Belgian devalutation and show greater readiness to accept the inevitable. But it is reported that France will even put gold coin into circulation in order to convey the assurance to the people that the Government intend to maintain the gold standard. Unless this is an extreme form of the make-believe that is unfortunately necessary to put exchange speculators off the scent, it would mean that France is determined to defend the gold standard to the last ounce of gold in the vaults of the Bank of France. This is clearly a signal for sterling to resume its downward course.

,, 3rd	4.81 1/4	72.87	145s. 7½d.	36 0 3	75 2 0	28 3/8	61¼

The rise of sterling has continued during the week. The sterling-franc rate has touched the high level of 73.15 on March 29 and the sterling dollar rate 4.79¼. There was thereafter a slight falling off, the sterling-dollar rate coming down to 4.81 13/16 and the sterling-franc rate 72.78. It is clear that the continuance of the improvement in sterling since last week is due to the accentuation of the feeling of uncertainty in regard to the gold standard currencies.

The shock of the Belgian devaluation cannot have spent its force so soon. It raises not only intricate questions regarding the relations between the belga and the £ but it also puts a new complexion on the position of the gold standard currencies. From the last two, three months of 1934, we had been urging that 1935 should witness some significant defections from the gold standard. And despite the frantic efforts of M. Theunis to bolster up the belga with the help of France and decrees regulating foreign credits, the devaluation of the Belga was from a long time ahead a foregone conclusion. It is well-known that Belgium is the weakest member of the gold bloc and that she would be the first to succumb to the increasing strain and stress that adherence to gold clearly involved.

Though, therefore, there is nothing surprising in that Belgium has been finally obliged to effect a devaluation of the belga, it is still necessary to examine the circumstances in which the final act of devaluation was decided on and to appraise the significance of the action taken by M. Vanzeeland. In the first place, it must be noted that Belgium affords the one important instance of devaluation since South Africa abandoned the gold standard towards the end of 1933. It is true that 1934 has for its share the devaluation of Czechoslovakian crown. But the Czechoslovakian currency has not any large international importance. In this case, the devaluation was rendered necessary by the plight of the export trade which, however important to Czechoslovakia, has no large place in world trade or international finance. It may, therefore, be said that after South Africa, whose action in 1933 is undoubtedly important, as emanating from a country which is one of the largest producers of gold in the world, the Belga is the most important. This shows that it has taken nearly two years since the failure of the Stabilisation Agreement at the World Economic Conference and the formation of the gold bloc for the difficulties of the gold standard to become apparent to the gold countries.

In some respect, Belgium offers a parallel to Britain in 1931. The points of similarity are that both Belgium and Britain are largely exporting countries who cannot resort to the devious and dubious methods of exchange control. Both are countries which strove their best to remain on gold. The final act of devaluating the currency was rendered necessary by the failure to procure sufficient foreign credits. And by reason of her position as competitor in the sphere of international trade, Belgium's action is likely to set up widening ripples of disturbance in international trade.

Another point about Belgian devaluation, which deserves to be noted, is that the decision of M. Vanzeeland signifies the break of the gold bloc. It will be remembered that the gold bloc was formed at the time of the World Economic Conference in London, when the Continental countries realised that the two English-speaking nations stood together over the questions of the devaluation of currency in terms of gold. The gold bloc, it is true, has had a chequered career since. It never achieved the solidarity which one would have expected from the manner in which they draw together in the face of the Anglo-Saxon challenge. Nevertheless, the gold bloc has till recently been a factor to reckon with. In any estimate of the strength of each gold currency, one had also to think of the possibility of some measure of mutual help among the gold bloc countries. But these ideas have now to be discarded. The devaluation of the belga was finally decided on only after M. Theunis returned from Paris with empty hands and had to confess that the Belgian franc could no longer be maintained. It is also noteworthy that France did worse than refuse to render help. In his contribution to this week's issue of *Indian Finance* Dr. Paul Einzig points out that the French offer of a loan was coupled with the condition that Belgium should earmark a part of her gold as security against the advance. This obvious effect of a typically French bargain has been to confirm Belgium in her resolve to abandon the untenable gold standard. The experience of Belgium in this regard should teach other members of the gold bloc what to expect of their leader. And it might well prove that hereafter each member of the gold bloc will have to stand or fall by his own efforts. What chances there are of Holland or Italy or Switzerland being able to maintain their currencies without external aid, one need hardly explain at length.

Another notable feature of Belgian devaluation is that M. Vanzeeland has faithfully followed the footsteps of Mr. Roosevelt. Like the American President, the Belgian Premier has passed a law fixing a maximum limit of devaluation. And he has at the same time effected devaluation of 25 per cent. as against the 30 per cent. allowable under the law. The obvious object of such a provision is that in the coming parleys on the stabilisation of the exchanges, Belgium should have a bargaining counter for herself. From the reports that have been received during the week, it would appear that, in his speech before the Chamber, M. Vanzeeland claimed that the devaluation now effected by him only means the removal of the overvaluation of the belga in terms of foreign currencies; and that, therefore, Belgium cannot be accused of aiming at the unfair advantages of competitive depreciation of currency. It is, indeed, too much to expect other countries, especially those who are competitors of Belgium in various manufacturing lines, to acquiesce in the claim that the Belga had been overvalued in the past and that the extent of such valuation is as much as 25 to 30 per cent. We learn that opinion in London City circles is that the belga had been overvalued but only to the extent of about seven per cent. These differences of opinion presage a somewhat sharp conflict when the representatives of the two countries will ultimately meet to consider the question of

PUBLICATIONS OF THE LEAGUE OF NATIONS

"BALANCES OF PAYMENTS, 1933"

Price: Rs. 4-2-0

Only existing statistical book of reference concerning international accounts (trade in goods and services, gold, long and short-term capital operations). Figures, are given for 32 countries, in the majority of cases for a series of years up to 1933 inclusive. Information is also supplied concerning outstanding international liabilities and assets. In a summary chapter the general tendencies up to September, 1934, are dealt with, special consideration being given to the effect of currency depreciation.

"ARMAMENTS' YEAR-BOOK, 1934"

Price: Rs. 13-12-0

This edition contains monographs on 64 countries, both members and non-members of the League, The information contained is derived from two sources: the communications from various Governments to the Secretariat on the occasion of the Conference for the Reduction and Limitation of Armaments and the official publications of the different countries, such as collections of laws, army gazettes, etc,

"NATIONAL PUBLIC WORKS"

Price: Rs. 8-4-0

This book has just been issued by the Communications and Transit Organisation of the League of Nation and is the result of a letter addressed by the Secretary General of the League requesting various Governments to communicate to him the following particulars: (1) A brief description of the main public works undertaken since the beginning of the year 1929; (2) The principal administrative methods followed or contemplated for the execution of such work; (3) The principal methods employed for financing such work; (4) An estimate, as far as possible, of the allocation of expenditnre on the execution of the possible works.

"INTERNATIONAL TRADE STATISTICS, 1933"

Price: Rs. 6-14-0

This volume analyses the foreign trade during the years 1931, 1932 and 1933 of 65 countries accounting for 95% of the total world trade. It contains more than 300 tables, which are accompanied by explanatory notes. The data it gives illustrate strikingly the great changes undergone in recent years in the composition and direction of foreign trade, and their effect in the position of the individual countries. The synoptical tables show the percentage distribution of each country's imports and exports by provenance and destination.

Complete Catalogue sent free on application.

SWEET REASON

The tenour of events in the Assembly in the past few weeks must occasion grave concern. The Treasury and the Opposition seem to be in serious disagreement, especially on economic questions. There can be no doubt that the members representing the Congress group are actuated by earnestness of purpose and that they are anxious to show a record of useful work undertaken in behalf, and in the interest, of the masses. Towards this end, they have put forward suggestions; they have proposed changes in the budget; and they have urged special viewpoints. The Finance Member, on his side, has a holy dread of whatever is new-fangled in economics. In his view, whatever is British is best. For every suggestion coming from the Opposition, his answer is, in effect, that it is unacceptable for the simple reason that it is not in accord with British example or British practice. The strong point of Sir James Grigg is his intimate knowledge of Britain's inland revenue administration. He does not lay claim to anything more than a nodding acquaintance with economics as a theoretical study. In fact, he revels in his contempt for the economist. Nor has Sir James any experience or direct personal knowledge of currency or money market matters. His equipment and training is thus purely sectional. There are aspects of his duties for which his equipment is not exactly attuned. In such a position, one can appreciate an attitude of thorough self-confidence on his part whenever questions of inland revenue are involved; at the same time, one would expect that he would keep an open mind in regard to proposals that pertain to currency or money market or the broader economic issues. If one understands the virtue of an open mind, there can be no place for peremptory or categorical assertions or for arguments with an assurance of finality about them.

* * *

In fairness to him, it must be admitted that the Opposition itself has but hazy ideas about the economic reforms it needs. Many voices have spoken on behalf of the Congress in the Assembly. But there has been no harmony amongst the voices. The Congress has yet to evolve a definite and clear-cut economic plan of its own. Meantime, their own ideas are nebulous; their own plans do not mutually tally; and they expose themselves to the charge of inconsistency and of lack of careful thought. We admit that it has been easy for Sir James Grigg to pick holes in the proposals emanating from the Congress side. But if it comes to the question of picking holes, it is, perhaps, only God Almighty who can devise plans in which no holes can be picked. Sir James has, doubtless, realised that his own plans and proposals are not infallible, and that it has been quite possible to tear them to pieces. The correct standpoint in matters of this kind is, therefore, the evincing of sympathetic and helpful interest in all suggestions that come from the other side. Criticism itself will be robbed of its rancour if this spirit of toleration should take root and flourish. Both the spokesmen of the Opposition and of the Treasury have hit hard; and both have resented being hit back hard. This is a situation which does not improve matters. It does no one any good. It does not advance the cause either of the State or of the population. This must yield place to toleration and mutual appreciation of different points of view.

* * *

If we may venture to offer advice to Sir James—in his present mood, he is more likely to dismiss our advice as impertinence—we would like him to realise that India is not England; that to tackle Indians requires a more proper understanding of the psychology of Indians; that candour should not be incivility and directness should not be offensive snappiness; that Indian conditions should be studied with a mind free of predilections and prejudices; and that it is in economic questions that honest and sincere attempts to find a common ground can succeed. We would also venture to offer advice to the Congress. There can be no doubt that Pandit Ballabh Pant, for instance, is one of the most careful students in economic questions; that he has read widely and digested carefully; and that his proposals are marked by general economic knowledge and particular knowledge of Indian conditions and Indian requirements. At the same time, there are directions in which the background of his economic knowledge would be all the better for strengthening. It is also necessary that the Congress should create an economic council of its own, with Mr. Pant as leader of this group. It will be the duty of such a council to allot to various members varied aspects of economic problems. It will also be necessary for this council to reconcile the various ideas that are now prevalent in the Congress group—the socialists in particular require tactful handling—and to adumbrate a precise and clear-cut programme and plan. The Government have been urged to set up an economic council. It is up to the Congress to set up its own economic council. The Government have been urged to evolve an economic plan. It is up to the Congress to formulate a parallel plan. The budget of the Government have been criticised from various points of view. It is up to the Congress to produce a parallel budget. If the Congress has done all this; if its members can speak in the Assembly with one voice, and on a common plan; and if each of the various aspects of this plan are in charge of a member especially deputed to make an intensive study of it, no Finance Member, however superior his air and however supreme his faith in his own infallibility, can afford to brush aside the suggestions of the Congress party in any light-hearted manner. If the Congress does not get a hearing in the Assembly for its views and its proposals, it should be entirely within its power to canvass public support outside in the country on the basis of its plan. It should then be able to play an important part in the creation of a healthy public opinion in financial matters.

* * *

In urging these views, we have in mind the changed circumstances in which the Swarajists led by Mr. Bhulabhai Desai have entered the Assembly—changed circumstances in relation to those under which Mr. C. R. Das and Pandit Motilal Nehru formed the party and directed its action in the last decade. The latter went into the councils with the definite declaration that they were out to wreck the councils. Such is not, we believe, the objective of Mr. Desai and his

followers. There has been no definite or positive statement that can be construed as an indication that the Swarajists of the new type are prepared to work the reforms for what they are worth. All the same, if their tactics should be merely the wrecking of the councils, there would again be the same frittering of energy. They would be again knocking their heads against the wall. If, then, the work in the Assembly is taken seriously, it will not do to carry a number of cut motions which have the effect of horribly mutilating the budget. Once this is done, the Finance Member feels piqued and he feels like persuading the Viceroy to certify the whole lot of them. We know that the Congress might, in its turn, say that to the extent of the cuts that they had effected, they are in a position to recommend alternative taxes or suggest directions of economy and retrenchment. But this is not practical politics. The simple fact of the matter is that no Government will be a party to fundamental or drastic changes in the budget. The proper course for the Congress would, therefore, have been to make such cuts as would bring the total to a reasonable figure, so that, in case the Finance Member gets them certified, it is he that will be putting himself in the wrong.

* * *

From this point of view, we would have preferred an alliance between the Congress group and the European group for the increase of the income tax limit to Rs. 2,000 and for the reduction of the surcharge on income tax to 12½ per cent. instead of 8⅓ per cent. These two changes would have given relief to the middle-class people as well as to business. If proposals towards this end had been passed with the joint support of the Nationalists and the Europeans, the Government would have found it very difficult to flout the wishes of the Assembly. The Congress could then have claimed that, instead of this sterile victory of votes in division after division, they were able to compel the Government to make important changes in the budget plan. In thus expressing our opinion, we should not be understood as showing any lack of sympathy for the motions that were sponspered by the Congress in regard to the reduction of salt tax or of postal rates. This is a matter which should have been taken up next year. Meantime, the Congress should have got ready its own plan and its own parallel budget. For sensational exploits of this kind, they would then have been far better prepared if they were ready with counter proposals and if they had created public opinion in support of such counter-proposals. There is much for Sir James Grigg and his colleagues (especially Sir Nripen Sircar) and much for Mr. Desai and his followers to ponder over in all that has happened and is happening in the present session. All this experience could have been of value if it stimulates a sense of responsibiltity and creates a sense of reality.

COCKPITS OF THE WORLD

The end of what we called a fortnight ago "the itinerary of the British Foreign Office" calls for a re-examination of the international political situation as it has developed or unfolded itself during the last few weeks. The flutter over the German announcement has largely settled down. In fact, within a week or two, it became clear that it was hardly a surprise to anyone. There was even discernible a feeling of relief that the nations were enabled to discard the solemn humbug of "collective security" and face both the national and the international problems in a more realistic manner. By its polite enquiry of Herr Hitler whether he would still like Sir John Simon to meet him and discuss questions, the British Foreign Office drew a sponge over Germany's breach of the Treaty of Versailles without exposing itself to the charge of blatantly letting France down on this question. Now that Sir John Simon and Mr. Eden have returned to London after their visits to Berlin and Moscow and Warsaw and pleasantly-worded *communiques* have been issued, the League enquiry into Germany's action is deprived of all practical import.

* * *

There is nothing in Britain's reactions to the German announcement or even in her actions subsequent thereto to show that Britain would be one of those to enter a passionate protest at the meeting at Geneva or otherwise strive for Germany reverting to her old position. Of even France, it may be said that she has got over the shock of Germany's rearmament. It is even doubtful whether it was at all of the nature of a shock, so far as France is concerned. First it is too much to believe that the French Government were in the dark about Germany's moves or her intentions. Prominent members of the French Cabinet have often asserted in international conferences and outside that Germany was far from defenceless and that the state of her war equipment was not without danger to her neighbours. France could at no time have believed, not even when the ink had not dried on the Treaty of Versailles, that Germany could for ever be bound down to its unconscionable provisions. The German announcement could, therefore, be regarded as an opportunity for whipping up national enthusiasm for the national defences and, what is more, as the signal for redoubled efforts at securing alliances.

* * *

The position of France in Europe is such that she cannot afford to take risks with the safety of the nation by trying to rely on the prevalent talks of disarmament and collective security. To the extent that the dangers of war are greater in her case, she has been more sceptic of success for the international

conferences. And now that talks of impending war are louder than the talks of international peace, France can proceed to strengthen her position without exposing herself to the charge that she thereby endangers the prospects of peace. The recent speeches of M. Flandin before the Chamber of Deputies show that the French Government are not in a mood to overlook the danger of war and are determined to speed up armament. It has been announced that the defences at the frontiers will be maintained at all times at the highest pitch of efficiency and that even the garrison will always be on duty. Whether this means that France expects an outbreak of hostilities at any time or whether this is intended as an advertisement of her fear of insecurity, it is not clear. But it is certain that no hope is entertained in France that Germany could be coerced or persuaded to observe the Treaty of Versailles in letter or in spirit.

* * *

The results, therefore, of the apparent upsets of the last few weeks is that the European nations are again back to the pre-war game of dividing themselves into two hostile camps. Till now the position of Germany and Austria as disarmament powers rendered such a game unnecessary and European politics centred round the financial and economic provisions of the Treaty of Versailles and the fatuous discussions of the disarmament conference. Both of them lacked somewhat in reality, the former because the economic and financial position of Germany left little room for choice and often pointed to only one solution as being the least impracticable. As for the disarmament conference, the powers rarely, if ever, came to grips with the problem. Proposals were always tentative ; and those, whom it suited, accepted them in broad outlines and the others replied with counter proposals. What time the European powers were engaged in pointless discussions of the technical issues connected with disarmament, hardly anyone neglected the problem of the national defences. Germany had certainly been preparing for a degree of equipment, on the strength of which she could take the bold step of repudiating her obligations under the Treaty of Versailles. For, considering the resentment which such action must cause in France, as also the fact that France would have no hesitation in resorting to arms over this question if she could do it successfully, Germany must have made sure that her fighting equipment was more than equal to such a contingency. Of only Great Britain, it may be said, that she had lagged behind in this mild race for armaments behind the cover of disarmament talks. Her decision to make up the leeway has, therefore, had the effect of putting an end to all this pretence.

* * *

It might be wondered whether the Geneva meeting would not change the complexion of affairs. It has been already hinted that the attitude of Britain towards Germany will deprive this enquiry of all practical consequences. It is easy to imagine the case that would be put forward by those who are sympathetic towards Germany. No international conference will have the temerity at this stage to insist that Germany should continue indefinitely in a state of disarmament, irrespective of whether the other signatories to the Treaty of Versailles discharge their obligations. Even if, for any reason, France should succeed in persuading an international conference to give an adverse verdict, it would make no difference. For by all tokens Germany is not in a position in which she need show undue deference to the opinions of international conferences.

* * *

It may, therefore, be taken that Europe has been deprived of that precarious halfway house, which Germany's helplessness provided during these years, between disarmament and a repetition of the tragedy of 1914. She has perforce to choose between collective security and the pre-war policy of trying to secure a balance of power, ending inevitably in a final clash. In our last comments on this subject, we referred to the insuperable difficulty that there is of bringing about such security based on international agreement. Unless the *status quo* is such that all the principal nations can agree to preserve it, collective security would be impossible through international agreement, or through disarmament. It need hardly be added that balance of power between opposing combinations of the type which Europe endeavoured to preserve through the long period of European nationalism, is highly precarious, and dangerous too, inasmuch as the slightest disequilibrium is bound to precipitate the catastrophe.

* * *

Nevertheless, international politics is bound to move for some time to come on the lines of pre-War diplomacy. For one of the principal obstacles to the resumption of such methods is the rise of public indignation against the duplicity of secret treaties. This was due not only to a revulsion of feeling at the methods which led to the great war, but also to the startling disclosures which followed the publication by the Soviet Government of the various understandings between Tsarist Russia and the nations of Western Europe. But to-day even Russia is not altogether opposed to participating in a similar diplomatic game. Apart from the falling off in idealism which the responsibilities of practical administration always involve, the Soviet has, by reason of its being alone in a circle of capitalist nations, to protect its integrity, if not interests, by ensuring the friendship of a few to balance the opposition of, it may be, the many. Public opinion in other countries is more ready now than during the post-War period to recognise that, if disarmament and international peace are out of reach, secret treaties and alliances

are at least a necessary evil. The world may, therefore, be prepared to see the nations dividing themselves into two or more warring camps.

* * *

The principal difference between the present position and that before the war is the possibility of such warring camps being more than two. M. Stalin hit at the crux of the situation when he pointed out to Mr. Eden that, while before the war there was only one country which attempted to alter the position to its benefit, there are now two powers, namely, Germany and Japan. It has long been recognised by the more far-seeing amongst European politicians that the rise of Japan and her ambitions have meant the addition of another sphere of warlike activity to the traditional cockpits of Europe.

* * *

It would be no easy task for each nation to ascertain where its interests lie and to choose its allies and auxiliaries. One can only state the present position in its broad outlines without attempting to indicate the lines on which the alignment of nations may take place in the future. The more restive powers are, of course, Germany, Soviet Russia and Japan. Nationalist ambitions in Germany are again surging up of late after the severe setback caused by her defeat in the last war. To the extent that Germany precipitated the War, it was an attempt on her part to realise her imperialist ambitions. One could expect Germany to desist from the game if the War had not inflicted serious losses on her. Having sustained the loss of all her colonies, she feels that it would not be wrong to seek redress when the time comes. It is true that at the moment she aims at no more than the end of her inferiority in respect of military strength. And it may also be that she would come within the scope of a tentative agreement with other nations for collective security. But it would be wrong to imagine that, because the Treaty of Versailles is obsolete, Germany has no reason to regard another war with a friendly eye or that she has no other ends to realise. The Treaty of Versailles has become defunct by the only way it could. It has sunk into disuse by the sheer weight of its iniquities. Reparations have ceased because they are literally impossible. Germany has rearmed, because the only condition of her continuance in the old state, *viz.*, the disarmament of other signatories to the Treaty, cannot be fulfilled. Even Austria has made bold to approach the powers with the suggestion that she may be allowed to re-arm; and it is not impossible that she might sieze the opportunity to act, regardless of the attitude of the powers whom she is now supplicating. But the Treaty of Versailles still stands in regard to the redistribution of colonies and the like. Germany cannot forget the loss of her colonies, though she may have no territorial ambitions within Europe.

* * *

Soviet Russia is placed in a more complicated position than Germany. She was till recently *pariah* in the comity of nations. Diplomatic recognition of the Soviet Government came in but slowly. The United States gave such recognition only last year. It is only a few years since Russia joined the League of Nations. Apart from the attitude of other nations to her, Russia had felt it wrong for a Communist Republic to make distinctions between one capitalist country and another. All this has by now completely disappeared. Soviet Russia was only too keenly aware of the growing power of Japan in the East and the threats of Germany in the West. Hitler rose to power on the strength of his tirades against communism. Nazi Germany claimed to be the bulwark of Western Europe against the Bolshevik menace; and a clash between Russia and Germany can arise as well over material interests as over cultural differences. With Japan, the clash of interest is more pronounced. The cockpit of the Far East will have no less importance in the future than Belgium or the Balkans had in the past. Though Russia is more defensive than either Germany or Japan, her interests in alliances is, undoubtedly, great.

The position of Japan may be said to hold the key to the future of world politics. In many respects, she is to-day similar to pre-War Germany. The rise of Japan, like the rise of Germany, is due to a combination of industrial efficiency and military strength. Both had set before themselves definite objectives in the political as well as the economic field. In both cases, the people had been trained and drilled to suit the national requirements. And both had been rewarded with phenomenal success in an exceedingly short space of time. But the most remarkable resemblance lies in the fact that in each the economic requirements determined the political ambitions and would not allow any abatement of the zeal for conquest.

* * *

In other words, prudence in politics has been submerged by the necessities of the economic system. And urged by economic necessity, Germany pitted herself against the rest of the world in 1914 and came to grief over it. Japan bids fair to do the same thing in the thirties. For, while in the case of Germany the nation was goaded to war by the imperialist ambitions of the Kaiser, in Japan there is a military class, which has performed, and is still performing, a similar function. Unless it proves that the military class cannot entertain the same *inordinate* ambitions as the Kaiser, Japan might well repeat the blunders of Germany.

* * *

It is only fair to point out in this context that the economic necessities are more inexorable in the case of Japan than in the case of Germany. With a population growing at a prodigious rate and with the working population increasing even faster than the general total, with a country which is extremely dependent on the foreign countries for raw materials and necessaries, Japan has to engage in a more relentless fight for a greater share of world trade than any other nation. But while the other chief industrial nations like Britain and Germany rose to political and economic power during a period of comparatively free international trade and when the world had not been fully developed commercially, Japan's rise as a trading power has to be achieved during a period of economic nationalism. In the competition for markets, Japan has the great advantage of combining the efficiency of the West with the frugality of the Asiatic. And Japan's entry into

each market is, therefore, resented all the more keenly and Japanese goods are submitted to the severest restrictions in the world's markets. As things are, there is, indeed, little chance of Japan being able to build up a foreign trade sufficient to sustain her people at a reasonable standard of living.

* * *

It was pointed out in our Overseas Section last week that Japan might seek a solution of her economic problems by bringing about an *entente* with China. There is no doubt that the economies of these two countries are in a large degree mutually complementary. China's efforts at political and economic independence have so far come to nothing. Large bits of territory have been shorn off the Republic by Japan. Within China, there are two rival Governments, each with its pretensions to sovereignty over the other's realm. But both are equally powerless against the large bands of communists, who have been quite as active as if the Governments had never made a move against them. Economically, the work of reconstruction has hardly been attempted. Chaos is rampant in the sphere of finance, thanks to the policies pursued by the United States. The efforts to secure foreign help by way of a loan or otherwise have grievously failed. In these circumstances, China could well turn to th one country which would be prepared to help her though, of course, on terms. There is very reason to think that this idea is growing in the minds of both the Japanese and Chinese. For Japan cannot be too hopeful of the prospects of gaining a larger place in the world's exports markets. It is precisely here that Japan will come into conflict with the rest of the powers. So far, Japan has aggrandised herself in China without the fear of interference from the United States or from the European an nations. But if the policy of the open door is to be replaced in China by a policy of preference for Japan, conflict between Japan and the European powers would surely be precipitated.

* * *

To the extent that the territorial ambitions of nations are determined by the necessities of their economic existence, there is an element of inevitability in wars of aggression. Of the other nations, Britain, France and the United States are by far the most important. Even as among them, France has perforce to engage in various alliances of an offensive and defensive kind. The United States is, and will be, for some time to come till Japan develops her full potentialities of military strength, secure in her own sphere. It is Great Britain, whose interests lie all over the world and who is still in a position to affect the alliances that may be formed in the future by the attitude which she herself takes. M. Stalin naturally made reference to the fact that the issue of peace or war in the world should rest so largely in the hands of so small a country. What Britain will do when she is driven to taking sides, it is difficult to say. But that her interests lie on the side of peace is beyond doubt. The British Foreign Office is, therefore, naturally engaged in saving as much as possible from the wreckage of the Disarmament Conference and in doing her very best to avoid a race in armaments. Being the happiest in the present position, she is the most sincere in the pursuit of peace. It is to be hoped that she will have the courage to press for those changes in the *status quo* which will induce all the nations to be as sincere in the cause of peace as she herself, undoubtedly, is.

INCREASE IN TEA CESS

The Bill, which Sir Joseph Bhore introduced on Tuesday last to amend the Indian Tea Cess Act of 1903, is one of the few pieces of legislation on which Government have agreed to meet, though even here only partially, the demands of industry. The object of the Bill is to raise the maximum of cess leviable on the exports of tea from India by sea from as. 8 per 100 lbs. to as. 12 per 100 lbs. Only last week we pointed out that the position of the Tea Industry is such that it can find no abiding solution of its problems except by the expansion of consumption through propaganda in the potentially important markets. But the industry lacks the resources necessary for conducting propoganda in all the promising markets at the same time. On account of inadequacy of resources, a kind of conflict may even be said to have arisen between propaganda in the United States and propaganda in India. We have been urging for a long time that this conflict can, and must, be removed by increasing the funds at the disposal of the Indian Tea Cess Committee. The demand was made that the maximum rate which can be imposed under the Cess Act should be raised to as much as Re. 1/-. The President of the United Planters' Association of South India was in favour of such a proposal ; and considering that the Act only stipulates the maximum rate, it is to be wondered whether

PUBLICITY OFFICER.

the Government should have insisted on fixing it lower at as. 12. But it would appear that the rate of cess on exports of tea has been the subject of understanding among the principal tea-producing countries in the world, namely, India, Ceylon and the Dutch Indies. It is reported that as from April 1, that the new duty of 75 cents. per 100 lbs. in lieu of the export duty would come into force in Ceylon. The funds so derived are to be devoted to propaganda, both within the island and in America, which is the most important market for all the principal producers by reason of its capacity to consume ultimately the total excess production of 344 million pounds.

BRITISH BUDGET RESULTS

The results of the last financial year in Britain, which were published towards the close of last week, are such as Government and people might alike feel proud of. In his Budget Speech last year the Chancellor of the Exchequer estimated a revenue of £706,520,000 and expenditure at £705,724,000, thus providing for a surplus of £796,000. The accounts for the year show that revenue exceeded the Budget estimate by £9,921,000 as a total of £716,441,000 has been realised. Expenditure has exceeded original estimates by £3,155,000. The realised surplus, therefore, is only £7,562,000. As the expenditure includes payments to Sinking Fund to the extent of £12,343,000, for which no provision was made in the original budget, the annual surplus of revenue over expenditure must be put at £19,905,000. The items of revenue, which have shown an increase over the estimates, are Income Tax, which at £228,877,000 shows an excess of £9,377,000, the surtax which has produced an excess of £1,165,000 and estates duties which are better by £5½ million. It is significant that, even at the lower rate, income tax during the year has produced only £50,000 less than last year's yield. The disagreeable disappointments are in respect of stamps which shows a decrease of £1 million and Post Office nett receipts, in which the original estimates seemed to have been £1,750,000 in excess of possibilities. The results are valuable as showing the improvement not only in Government finances but also in trade and industry.

THE EASTERN BANK

The Eastern Bank has celebrated in a fitting manner the end of a quarter century of efficient service to trade and commerce in the countries in which it operates. As the chairman, Mr. J. S. Haskell remarked in the last general meeting, it was a period of trials and difficulties. Instituted at a time of phenomenal expansion in the foreign trade of India, it has seen within a few years, a reversal of the trend, culminating in the economic depression of 1929. The volume of business offering is so little and the competition is so great that it has been indeed, no easy task to conduct the business of the Bank on a safe and remunerative basis. That the Bank has passed all through these trials and at the same time built up a sound position with reserves of £500,000 is a matter for pride to those who have been in charge of the Bank and who have been in every rung of its service: The success has been signalised by the announcement of a bonus on this occasion of 3sh. per share. As the Bank has weathered the difficulties of earlier years, one may be sure that the secret of conducting a sound banking business even in the most troublous times has been learned beyond all possibility of forgetting.

* * *

Mr. Haskell's references to questions of public importance are in the same happy vein. He puts in a dignified defence of the banks from the charge that they have not served industry well and that, therefore, they must be nationalised. He affirms the faith common to bankers all over the world that a policy of financial integrity would do more to restore trade than one of reckless expenditure. What is most significant to India is that Mr. Haskell does not mince the fact that India's foreign trade is unbalanced.

CALCUTTA MUNICIPAL GAZETTE.

The Seventh Health Number of the *Calcutta Municipal Gazette*, like all special publications of Mr. Amal Home, deserve careful study at the hands of the ratepayers of this city, for whom it is primarily intended. The special feature of this Number is that, while normally one would regard one's health as a condition of one's personal happiness, Mr. Amal Home makes us regard the question from a different standpoint. It is not, perhaps, new. But there is a subtle suggestion borne in on us by pictures and write-ups of various kinds that to preserve one's health is a duty to the race. "The race marches forward on the feet of children." So is a race borne down into the abyss of misery by the shabby living of the young and old. This annual reminder of our duty to the coming generations no less than to ourselves should not go in vain.

THE EASTERN BANK LIMITED.

QUARTER CENTURY OF WORKING

EARLIER TRIALS WELL SURVIVED

SPECIAL BONUS

The Twenty-fifth Annual General Meeting of the Eastern Bank Limited was held on March 20, 1935, at the office of the bank, 2 and 3, Crosby Square, London, E.C.

Mr. J. S. Haskell (Chairman of the Company) presided.

The Secretary (Mr. C. L. Manning) having read the notice convening the meeting and the report of the auditors.

The Chairman said:—Ladies and gentlemen,—I must apologize to you in the first instance for the absence of our genial Deputy Chairman, Sir James Leigh-Wood. He is one of the original directors of the bank and has not hitherto missed a single general meeting. He is as disappointed as we are that he cannot be with us to-day. His absence is due to a sea voyage, undertaken for reasons of health, and I feel sure you will all join with me in wishing that he will return to this country fully restored in strength and vigour. (Hear, hear).

It is a great privilege to be addressing you on this occasion, the twenty-fifth general meeting of the bank. I think we have every reason to congratulate ourselves on our record. When the bank was founded world conditions were quite different from what we find them to-day. Trade was very active all round, India's exports and imports were advancing by leaps and bounds, and it was felt that a new exchange bank could further develop and expand that trade with a good prospect of yielding a fair return to the shareholders. We were, however, soon to be undeceived but not discouraged.

DIFFICULT YEARS

Shortly after our being organized a succession of failures of local banks in India took place, and the opium trade with an annual turnover of several millions of pounds sterling was eliminated; then came the Great War and its aftermath. During the War large profits were made by the banks in exchange and dear money, but equally large losses were afterwards incurred when the rupee exchange dropped from 2s. 10d. to 1s. 3d., and innumerable contracts for the purchase of goods were thrown up. Another shock was the great and prolonged slump starting in 1929 with the resulting shrinkage in the values of commodities causing many failures of traders and again entailing heavy losses to the banks.

Altogether these last 25 years have been most trying and harassing. Neverthless, I am happy to say we have surmounted all difficulties with which we have been confronted without in any way affecting the stability and credit of the bank. (Hear, hear). From the first, regular dividends have been paid—for 11 years in succession at the rate of 9 per cent.—full provision for bad and doubtful debts has been made out of profits, a reserve of £500,000 has been built up, and our securities stand at appreciably higher prices than their book value. There is nothing outstanding which gives any undue anxiety, and the bank stands to-day in a stronger position than it has ever been. (Hear, hear).

the directors' appreciation and thanks for their unstinted and devoted services.

You will, I know, be glad to hear that the cuts in staff salaries which had to be made in 1932 were restored in full from the commencement of last year—(hear, hear)—and that the bank has made an extra contribution to the provident fund in proportion to the salaries drawn.

Apropos of the bonus to the shareholders, I would like to mention that it must be regarded as a special payment and must not be considered as a permanent increase in the usual dividend. Our policy is to conserve our resources and to strengthen our reserves until trade conditions become more or less normal.

At the present time credit remains cheap and plentiful at home, in India, and in Iraq, and it is most difficult to find employment for our funds. Exports also, on which an exchange bank mainly depends for its operations, show little resiliency.

SITUATION IN INDIA

As regards India, exchange has ruled practically unchanged at the top, and profits from that source are negligible. Owing to substantial exports of gold, the Government of India have been more than enabled to meet their home requirements, the remittances during the year amounting to £47,000,000. The total shipments of gold aggregated £44,750,000, against £37,500,000 in 1933. Exports and imports of merchandise aggregated £113,500,000 and £94,400,000 against £110,500,000 and £89,000,000 in 1933. The favourable balance on merchandise is thus only £19,000,000, so that without the export of gold the Government would have had difficulty in meeting their home requirements.

The favourable balance on merchandise is unsatisfactory compared with the balances of the past, which used to amount to far more than the Government's home requirements, thus enabling India to import specie. Until a revival in general world conditions takes place and India's products command higher prices, a substantial improvement cannot be expected. During the current year gold has continued to be exported in considerable quantities, and a rate of exchange higher than that which prevailed last year has been maintained.

IMPROVEMENT INTERNALLY

Internally the economic position has greatly improved; a wave of optimism has spread in the bazaars; quotations for many industrial shares have advanced considerably, and Government securities have reached a very high level. Given peace and order as prevailing at present, India is in a better position than almost any other country to take advantage of any general recovery. We may, I think, look to the future with confidence. It is of interest to note that India imported last year £8,100,000 of Manchester goods, against £6,700,000 the year before.

IRAQ AND PERSIA

In Iraq the outstanding event was the inauguration of the new pipe line for the transport of oil from Mosul to Haifa and Tripoli, which was opened by H. M. King Ghazi in January last. The oil industry is of the greatest importance to Iraq, and will no doubt bring great prosperity to the country.

As regards trade there has been a little improvement in some directions; money is plentiful but there is no demand for it locally. Unfortunately the measures adopted by Persia tending towards the gradual extinction of all commerce with that country through Iraq will reduce imports to a minimum. The transit trade from Baghdad to Persia formed an important part of its imports. Goods for the Persian market were bought in Baghdad and transported by merchants and traders for sale in Persia. Now this business is being conducted on barter principles under the control of the Persian Government, and the sugar trade has become entirely a Persian monopoly. It must be feared that the prospects for the near future are not very promising.

At home ecnomic conditions have continued steadily to improve, and confidence is being restored. Money is cheap and is circulating freely. Industries concerned with the home trade continue to show better results and the export trade shows some improvement. The dark spot is the increased imports of manufactured goods making the adverse balance of trade greater during the past year. The only method of decreasing the visible balance is to import less generally and produce more foodstuffs. The Government have not been unmindful of the desirability of such a course and, now that the tentative steps they have taken have in the main proved successful, they should be urged to adopt a faster pace and show greater determination.

NO NEED FOR A "NEW DEAL"

We do not need a "New Deal" in this country. We have already learnt by experience that to spend large sums of money upon unremunerative objects can only result in disorganizing our finances whilst contributing but little in the way of alleviating unemployment.

What is the position in the United States of America? The "New Deal" has completely failed; it has proved more destructive than constructive; the gold muddle, oil fiasco, and untimely attack on utilities have been very baneful not only for that great country, but have retarded the recovery which was making some headway not only here but all over the world. Their silver policy has done great harm to the economic position of China, and is hindering their trading with the outside world, to the detriment of the United States of America itself and Europe. Until they refrain from further experiments and cease juggling with gold and silver it is to be feared there is little prospect of international trade making much progress in the near future.

In marked contrast, the National Government in this country have, by common-sense measures on orthodox lines, succeeded in restoring and maintaining confidence, stimulating trade, and reducing unemployment to a level which was considered impossible in 1932.

THE CRITICISM OF BANKS

You have of late heard a considerable amount of criticism of the banks. It is alleged that our monetary system is not equal to the demand made upon it, and that the banks do not help industry by advancing money sufficiently freely. The remedy put forward is the nationalization of our banking system. The allegation has been dealt with fully by the Chairmen of the Joint Stock Banks, who have shown that there is no foundation for it. The truth of the matter is that our banks, by the financial support they have given to industry, have amply fulfilled their part in the expansion of trade. They have been the wonder and admiration of the world. No banks in any other country have stood the stress of the last few years as they have done.

If they have erred at all in the matter of granting facilities, it has been in granting too much and not in granting too little. Owing to keen competition and the desire of the banks to use their redundant funds an applicant for credit not infrequently obtains from several competing banks facilities which taken individually might be warranted by his position but which taken collectively are far in excess of legitimate requirements, and he is thus led to over-trade and to final disaster. Whilst under the cast-iron rules and regulations governing advances which would be made for the guidance of nationalized banks the numbers and amounts of unwarranted credits might be reduced, the numbers and amounts of credits which were really warranted would be likewise reduced, with the result that a serious blow would be dealt at the trade of this country.

BALANCE-SHEET FIGURES

The figures of the balance-sheet call for no particular comment. There is a new item on the assets side—namely, Eastern Bank Trustee and Executor Company (India), Limited, representing our share-holding in a company registered in India to act as trustees and or executors. The object of forming this subsidiary company was to meet more fully the requirements of persons domiciled in India. We trust that our friends there will realize the many advantages afforded by the company and make full use of the services it offers.

As you will have seen from the report, the profits of last year, including the balance brought forward, amount to £181,766-18s.; the dividend absorbs £60,000 and the bonus £30,000. We further recommend that £40,000 be placed in the contingency account, leaving £51,766-18s. to be carried forward.

I now have pleasure in moving:—"That the report and accounts be adopted and that a final dividend of 3s. a share and a bonus of 3s. a share, both less income-tax at 1s. 9.372d. in the £. after allowing for relief in respect of Dominion income-tax, be paid on March 23 to members who are on the register on that date, out of the net profits of the bank for the year ended December 31, 1934." (Applause).

That will be duly seconded and, before putting it to the meeting, I shall be happy to answer any questions. (Applause).

Mr. G. Bromley-Martin seconded the resolution and, no questions being asked, it was put to the meeting and carried unanimously.

The Chairman next moved the re-election of the retiring directors, Sir Percy Wilson Newson, Bt., and Sir Thomas Strangman.

This was seconded by Captain Derek Fitzgerald and unanimously approved.

On the motion of Mr. Joseph Nissim, seconded by Mr. J. Raymond, the auditors, Messrs. Turquand, Youngs and Co. and Messrs. Lowe, Bingham and Matthews were reappointed.

VOTE OF THANKS

Mr. F. Salinger:—Mr. Chairman and gentlemen,—Two years ago I came here to have the pleasant task of moving a vote of thanks to those responsible for the excellent management of this bank. To-day I come again with the same mission from my country home. We have heard a very lucid and clear statement by our Chairman and a retrospect of the bank's work during the last 25 years. I think it speaks wonders for the management because we have been through, as he told us, rocky times—very rocky times—but we got through them to the position which we are in to-day, of which we ought to be proud. Our position is all the more marked in view of the amount of adverse criticism which we have heard on political platforms regarding the management of our banks.

I think that nothing further need be said other than that in these troublous times, when we are all accustomed to have our dividends reduced and sometimes to get none at all on our investments, it is very gratifying and welcome to have this extra bonus, which we note is due to this auspicious occasion and is not to be taken as a precedent. I ask you to give a cordial vote of thanks to the Chairman, Directors, and Staff of this bank, especially our worthy general manager, to whom reference has already been made. (Applause).

Mr. T. Roberts seconded the resolution, and it was unanimously accorded amid applause.

The Chairman briefly acknowledged the compliment, and the proceedings then terminated.

As Good To-day as
in the Good Old Days

I reached Delhi on Friday night ; and the first thing I learnt from Mr. A. D. Shroff was that 3½ per cent. Rupee Paper had collapsed ; and that the market had touched Rs. 90. Worse news was to follow on Saturday. At one time, the rate was as low as Rs. 87-10. From Rs. 98-10 which was, I suppose, the highest touched in recent weeks, the drop was no less than eleven per cent. As grave and upsetting a catastrophe as that of the Spring of 1933 ! From the moment the market touched Rs. 95, it has been an avalanche of selling on the announcement of any news with a tinge of bearishness. Every bearish factor has had exaggerated effect. In the upward trend, 3½ per cent. Rupee Paper just limps behind the sterling stock. In the downward march, India shoots ahead of London. It must be, if everything was normal, the other way about. The ways and means budget of the Indian Treasury for 1935-36 is as strong as it has never been to my knowledge. Foreign developments (unless it be actually a war) should have no influence on rupee stocks for the simple but ample reason that there is hardly any foreign short-term money to take wings and fly. London is most susceptible to such 'bad money' ; we have no 'bad money' lodged or flying about in India. The position of giltedge in our country is, if the truth be appreciated far sounder than that of even British Funds. This was the burden of my song wherever and whenever I spoke on, or discussed India in my last London visit.

I wish, Sir James Grigg, the custodian of Indian finances, has as firm and rooted a conviction in this matter as has the Editor of *Indian Finance*. He gets this faith, I suppose, only roundabout new loan occasions. But, unless this faith becomes his very religion, his credit policy will be suspect amongst the investing public. After this serious landslide of eleven points in less than thrice as many days, it will be no easy job to coax investors into the next New Loan. It is all a profound tragedy that the Government have, wantonly and callously, killed the surging hope and optimism of the giltedge section. In this massacre of the investors, the Government have equally massacred the prospects of a New Loan on favourable terms. Something Herculean is required to restore confidence in full measure. Sir Osborne Smith has done many a Herculean job in the past ; he may do it again. And the natural tenour of events will be in his favour. All the same, it is a disturbing reflection that for A's sins, B has to do the expiation.

To return to Delhi. This year's session of the Federated Chambers, which was held at March-end was eventful but unexciting. The Presidential address of Mr. Kasturbhai Lalbhai was a precise and concise survey of the economic position ; and he conducted the proceedings with tact and vigour from beginning to end. The congratulations that were tendered him at the conclusion of the session were were much more than a formal rite. There was earnestness in every word of Mr. G. D. Birla who proposed the vote of thanks ; and his sentiments found an echo in every section of the House. Lala Padampat Singhania, who is to be the president for the current year, has made a start which has impressed everyone. Even last year, when the Vice-presidentship was offered him, he showed consider able reluctance in accepting it. With becoming modesty, he pleaded that his young age and lack of proficiency in English might create the impression that this honour was going to one unworthy of it. He showed equal hesitation this year in accepting the Presidentship. I have always believed that knowledge of one's limitations is the starting point of real competency. From this standpoint, I have every confidence that Mr. Padampat would make a far better success than some of the cock-sure kind. And after all is said and done, is literary proficiency as important a requisite in a Federation President as proficiency in all aspects of business? And is young age a crime?

Mr. Padampat holds a unique place amongst the Marwaree community. Most Marwarees have but a nodding acquaintance—if at all—with industry. Mr. Padampat has widespread, direct and intimate contact with many branches of industry. His firm controls one of the best-managed cotton mills of Cawnpore—a first-rate jute mill—a sugar factory—a soap works—an oil mill—a re-rolling steel mill—and a woollen mill. He is adding another cotton mill. His firm is not mere managing agents ; these vast industrial ramifications are more or less proprietory concerns of Messrs. Jugilal Kamalapat. There are few industrialists in India—not certainly amongst Marwarees ; nor, perhaps, even amongst other communities—who have such large intersts in, and such personal experience of, industry in every

phase as have Lala Kamalapat and his son, Lala Padampat. Padampat may not know much of Shakespeare or Marlowe, Macaulay or Dryden, George Meredith or Jane Austen, Marshall or Taussig; but he knows everything about spindles and looms, boilers and engines, horse power and human labour, banking and finance, markets and marketting. The Federation authorities did well in over-ruling the timidity of the new President and unanimously installing him in the *gadi* for 1935-36.

I had another reason to feel gratified at the choice. It was he (ably aided and abetted by Lala Shri Ram) who took the lead in the 'compromise' manouvres between the "Treasury Benches' and the 'Opposition' in the Federation. And their efforts were crowned with such success that a wag remarked that the session was far too stale and tame for lack of the fireworks which the controversies and the party schisms of earlier years used to provoke. The olive branch hung over the deliberations in committee and in open session. What the speeches lacked in fire, they made up by their logic and their reflection of harmonious feeling. There were some exceptionally able performances, the most notable being those of Mr. A. D. Shroff, Mr. Manu Subedar, Mr. J. J. Kapadia, Mr. Dixit (who spoke with real confidence and authority—verily, a new star in the firmament !), Mr. G. L. Mehta, Kumar Raja Muthia Chettiar, Pandit K. Santanam, Mr. Jeevanlal Setalvad, and Mr. Birla (whose proposal of felicitations at the end was free of the stiff, formal tone and marked by a sincere ring). For the sheer number of good speakers and able speeches, this session of the Federation is, perhaps, the best that I have so far attended—and I have attended everyone of them. Everyone was happy; it was the dawn of peace; the gang of Maiden's Hotel were taken into the bosom of the groups in Albuquerque Road and Curzon Road; and as a fitting celebration of reconciliation, Lalas Shri Ram and Shankarlal, princely hosts, invited the entire crowd to a feast where the tiger and the lamb shared a common feed. Sir Purshottamdas Thakurdas and Mr. G. D. Birla must be experiencing the thrill of fulfilment; for, the Federation is their dream come true; and this is the first session of the Federation where the spirit of federation has sprung in full measure.

Otherwise, too, there was intense life and stir in Delhi. The advent of the congress in the Councils has transformed New Delhi from a sleepy hollow into a beehive of energy and activity. What struck me most is that the number of absentee members is clearly on the small side and that most members are in such grim earnest about their work that they stick to their seats for a considerable part of the day's session. I sat in the lobby for more than three hours; and hardly one or two of the congress group strayed out of the house. The old listlessness, apathy and levity are gone. There is present to-day a burning zeal, definite purposiveness and careful preparation. Likewise, the Treasury Benches also remain full. It pleases the heart to see that everyone has a new sense of responsibility and reality. I can see that even Government officials, though considerably embarrassed by the vigour, versatality and vehemence of the opposition, are happy that the Assembly is no longer a humdrum affair and that everyone is taking it seriously. Thanks to Satyamurtis and Ballabh Pants on the Opposition Benches and Griggs and Sircars on the Treasury Benches, each day's session is proving quite exciting, replete with thrust and counter-thrust, repartee and retort, pert phrase and cutting epigram. The spirit of the Assembly proceedings is exemplified by Sir James Grigg's outburst that he would hit as hard as he is hit. As Sir James and Sir Nripen are yet young in their parliamentary career; and as most of the Opposition members are new to

their task, this process of extravagant and exaggerated personality in attack and counter-attack is inevitable ; and it may be taken as certain that as all of them get into their stride, there will be more and more of give and take.

On the side of the congress, Mr. Bhulabhai Desai, the leader, is maintaining and preserving an urbane outlook, a cultured standpoint and a pose of utter dignity. A like office is now discharged on the Treasury Benches by Sir Frank Noyce. The rest will, one may be sure, fall in line ; and I expect that the Simla Session will witness more accommodativeness in view-points and less aggressiveness in personalities. However, there is no cause to regret the current phase of extreme pugnacity on either side. It is a welcome relief from the last Assembly which met its end, unwept, unhonoured and unsung. The pendulum has swung to the other side ; and this was but natural. Methinks, it will not be long before the pendulum is restored to normal.

This hope of mine receives encouragement from the atmosphere which prevails at the kind of intimate dinner party given by Mr. Satyamurti. The feast was not another fore-gathering of the congress caucus. It was a cosmopolitan crowd ; and I have rarely seen such conviviality as prevailed at that function. There was Mr. F. E. James exchanging notes and seeking possible avenues of common work. There was the Raja of Kollengode whose life has been spent in burning incense to the gods. There was Sir Cowasjee Jehangir who leads the Independent Party when Mr. Jinnah is absent; and there were others from other groups. My hope of the future is in the popularisation and extension of functions like these. Mr. Desai is a cordial host and a constant entertainer ; and more misunderstandings are settled round the festive board than one realises. It is true that the congress has put a ban on social functions sponsored by officials. This means that one of the most efficient machinery for generating amity and goodwill has been put out of action. Nevertheless, it is heartening that New Delhi daily celebrates other kinds of social functions whose accumulative effect cannot but be to end old misunderstandings and to create new understandings. I believe that the best cure to mutual suspicion is a frank heart-to-heart talk. No two earnest men who have occasion to exchange ideas without reserve and with candour can ever remain foes. When the first flush has passed, when the initial effervescence has disappeared, Sir James Grigg and his friends will realise that there is as much wisdom and coherent thought and earnest planning on the Opposition Benches as on their own ; and the followers of Mr. Desai will equally realise that it is not every action of the Government that deserves reproach as *malafide*. I see that economic questions are looming large in all discussions ; and political issues are being steadily pushed into the background. A clear understanding and a more resolute pursuit of the economic problems of India should result in the discovery of a common plan of action in which the Government and the representatives of the varied groups can work together for the economic betterment of the masses. This is an objective on which there is no disagreement. The methods that should be adopted for reaching this objective may differ in details ; but there are a good many of them in which the Treasury and the Opposition would find common ground.

OLYMPUS

(FROM OUR CORRESPONDENT)

New Delhi, April 2.

Western Court, Windsor Place and Ferozeshah Road were all strewn yesterday with "April 1st" victims. The younger brains worked havoc with the older parliamentarians. "Deep", Jaffer, Gauba, and Das must have been at it to have caused so many casualties. The Viceroy's House was visited by people wanting a lunch ; the Commander-in-Chief's residence found unwanted visitors; the Home Member protested he had no share in arranging this "mysterious" call from his house.

* * *

By the time evening fell the stories of the havoc had gone far and wide and even a little party in my house stood in danger of being disrupted. But the doubting guests were reassured that I had not fixed it for first April with that intention. How I wish I had !

* * *

The Assembly, too, had its share of laughter. "The Finance Member does not like Indian salt" said a Member. Mr. Gadgil responded "No, he likes somersault". This referred to the predicament in which the Secretary of State had thrown him over the Indo-Burmese Tribunal. Sir James Grigg has been reported in some quarters as having cursed "Indianisation" for this slip, because some Indian clerk had not brought it to the notice of the higher officials. But the fact of the matter seems to be that the Finance Member is more angry with the Secretary of State who has let down the Government of India. Perhaps, Sir James Grigg would hurl a few epithets at the Moghul in London. He has the necessary daring, if he escapes the Home Department Censor !

* * *

There is a race between Sir N. N. Sircar and Sir James Grigg. Who will hit the Opposition the hardest? It is a neck-to-neck race. They both are determined to give Congress no quarter, and take nothing lying down. Whatever the motive and whatever the end, it certainly is producing good copy for the press. It was a treat to hear Mr. Govind Ballabh Pant deliver "parliamentary" attack on the Finance Member ; and it gave a thrill when the Finance Member tore the mask and said "If you abuse me you will have it back. Let there be no doubt about it. I am not here merely to read an essay on economics and finance". A little exaggeration, here and there, he pleaded, should be excused with a sense of humour which the Opposition should possess in abundance.

* * *

It is only the human side of the story that really interests us in the Press Gallery. The fate of the Finance Bill is already sealed. It will be certified ; the Finance Member will not alter it in the fundamentals. He was quite ready to let the Opposition have its full say—and even accept their alternative verdict—provided they kept within the bounds of budgetary equilibrium. And as they have already destroyed it by dropping 3 crores out of the salt duty, he is, perhaps, no more interested in their decisions.

* * *

But some changes of a 'constructive' character will be carried by the Assembly ; and it remains to be seen whether, when advising the Viceroy to recommend or to certify the Bill, the Finance Member will take note of those changes in the Bill. He might. After all, there are a few things on which popular opinion really feels strongly, such as the restoration of the two pice post card and the elimination of the taxpayer with an income of Rs. 2,000 and below.

For the last-named change the Income Tax Department, too, will be happy. This has been their worst charge, and most of their unpopularity is due to this tax. And they hardly get much out of it considering the cost of collection. But such a proposal will throw a few hundreds out of employment.

On the merits, one wonders whether any relief in direct taxation should be encouraged when indirect taxation remains undiminished. The Congress cannot escape this fact, that its advocacy of industrialization does lend support to the Government's argument that the plea for the poor becomes weak when the consumer is asked in the same breath to make sacrifies. This argument may seem fatal when put forward by itself, but it sums up the entire difference in outlook between the present administration and the future.

* * *

For instance India wants to be self-contained in the matter of salt supply. Government spokesmen say "It cannot be" Congress wants tanning industry to develop and retains export duty by its vote but Government says "Then what about the primary producer? He pays for it." The whole session, the two sides have been arguing in a circle. And nothing will resolve it in the near future. So that all we can expect is wordy warfare and more bitterness.

* * *

One had imagined that the Federation of Indian Chambers of Commerce would rouse some interest. It did not. It hardly raised a ripple over the Delhi waters. Neither at the Conference, nor at the two vegetarian luncheons given by the outgoing and incoming Presidents, were to be seen any Members of the Government of India, and the highest Official of the Secretariat at the table appeared to be Mr. A. G. Clow the Labour expert, who must have enjoyed some fun in being in the "capitalist" camp.

* * *

But though the Federation merely repeated previous protestations, it did raise a new war cry—that relating to Insurance business. What is more, the Federation arranged a peaceful solution of the "rift in the lute" which had been going on for a number of years. The younger group has been admitted heartily and will now pull its full weight through a powerful combine provided by Mr. Subedar, Mr. Shroff, Mr. Dinshaw and Mr. Santanam. Indeed, whatever speeches of consequence were made this session, were contributed largely by Members of this group.

* * *

This does not mean that the Elders were thrown aside. Sir Purshotamdas, being the chief among them, received every respect and consideration and Lala Shri Ram was the idol of those who had got peace through his intervention. Between the Extreme Right and the Extreme Left the Delhi Lala does hold the balance.

* * *

Sir Fazli Hussain has left Delhi. None of his colleagues saw him off at the station except Sir Frank Noyce. At least there was one who showed the regard he has for the Punjab leader. Sir Fazli has been, perhaps, against aggressive methods of warfare, and, in the absence of any communal adjustments, he has expressed the views of political India. By the time he has left he had made more friends on the Opposition than he has in the Government. Perhaps it is as well, for he has to angle in the Punjab waters, and needs less of prejudice than had occurred during his ten years of administration in the Punjab.

"NATIONAL SCHEME" OF ELECTRIC SUPPLY

(FROM OUR CORRESPONDENT)

Madras, April 2.

The prayers of a hard-pressed correspondent for more interesting items of news than the fatuous discussions of a council of economic dilletantes have apparently been heard. The week has seen the publication of the details of "a national scheme" to supply electric power throughout the Madras Presidency prepared by Major Howard, Chief Engineer for Electricity to the Government of Madras. It has also witnessed the formal opening of the Nizamsagar Irrigation Dam by His Exalted Highness The Nizam of Hyderabad. And at about the same time, has been published the report of the working of the Krishna Raja Sagara and allied works for the year 1933-34. All these topics are, no doubt, somewhat hackneyed in these columns. But it must be remembered that for a province like Madras, for which industrialisation is still in the future, and in which agriculture is in a doleful state of depression, all developments of public interest will have to centre round the agricultural staples, projects of irrigation and schemes of Hydro-Electric development. This is in the nature of things. And if often we have to refer in these columns to topics which have been dealt with before, the circumstance that new aspects are considered or fresh details supplied must be considered to be very much more than a mere extenuation.

It is true we have often had to consider the development of the Mettur and the Pykara projects. But the public is yet to know that Pykara and Mettur, big as they are in themselves, form but a part of a far bigger scheme of supplying hydro-electric power to the remotest villages of the Presidency. There is nothing pleasanter than to imagine the whole of the Presidency not only lit with electric lamps and cooled with electric fans but also humming with a new industrial life, yes, new in the sense that it will have, by the development of cottage industries, avoided the evils of industrialisation and literally gained the best of both worlds. Major Howard has not only let his imagination soar to ethereal heights. but he has planted his castles in the air on the firm foundations of reality. His is a scheme which is essentially practicable, not only because it presents no technical difficulties of execution but it also yields, on the most conservative basis, ample return on the outlay which the public will be called upon to make. Thus it is that financially and technically it is sound. It is calculated to stimulate the imagination of the people and sustain their enthusiasm by the promises of tangible rewards.

Presented in its somewhat cold detail, this scheme contemplates the division of the Presidency into nine power areas, namely, Mettur, Madras, Anantapur, Periyar, Papanasam, Pykara, Vizagapatam. Bezwada and Chettipet. The Madras and Pykara power areas already exist, though they have to be further developed. The Mettur area is now to be formed by the inauguration of the Mettur Hydro-Electric Scheme, while proposals are to be submitted for forming the remaining power areas, except, possibly, Periyar, within the next five years. Hydro-electric stations will be started at Kolab, Chettipet, Moyar, Periyar and Papanasam, and thermo-electric power stations at Vizagapatam, Bezwada, Pamidi, Tanjore, and Maniyachi.

It is proposed that some of the power areas will operate together and there will be an interchange of power between stations to suit the load and water conditions, so that each generating plant may be operated to the best advantage. By such provisions, the difficulties arising from the uneven supply of water in the hydro-electric projects, due to the water conditions being made available for irrigation purposes, are overcome. It was at first thought that such difficulties might be overcome by imposing inconsiderable restrictions on the irrigation. It was suggested that for a comparatively small restriction of irrigation flow of a few weeks, twice in fifteen years, the reservoir working tables could be so modified as to increase appreciably the potential power output and the earning power of the project. The present scheme does not, however, contemplate any restriction in the irrigation flow for power purposes, but is based upon minimum output and least favourable conditions. The note prepared by Major Howard contains details of the Mettur Hydro-electric projects and the transmission of lines connected therewith; but such details have been already reported in these columns on former occasions and do not call for repetition in this context.

What is important now is whether the enthusiasm of a technical expert has not outrun the prudence which, for instance, a Finance Minister would exercise before giving his final approval to the scheme. In this respect, hydro-electric projects in India are by no means in the nature of a leap in the dark. Even in regard to the supply of electric power for agricultural purposes in rural areas, we have the benefit of the experiences of the United Provinces; and, if anybody should suspect that conditions in Madras might be different, the Pykara project has been working for two years and the results of the working should form a thoroughly reliable basis for estimates in regard to further extensions.

It is useful, therefore, to point out in this context that the attempts of the Government to popularise electric power have been more than amply rewarded and the demands for power from Pykara is very great. The increase in number of enquiries for power from commercial bodies and the economic nationalism in this part of the country show that the demand for power will be greater in future than was anticipated when the Pykara Scheme was conceived and laid out. The demand for power is much greater than was anticipated and is steadily increasing. The estimates of load and revenue in the schemes which have been taken on hand are based on the actual requirements of the various licensees who have agreed to take power supply. Particular attention, we are told, is to be paid to agricultural requirements. In the Coimbatore District area, in less than two years over 1000 h.p. in pumps are already connected or agreements have been signed. Boring for water in a systematic manner as in the United Provinces is being advocated for areas where water is scarce. There have been important enquiries for future power services from various parts of the area included in the Mettur scheme. New sugar factories are to be established and textile mills of various types are projected at Salem, Trichinopoly, and Tanjore. And the public in areas in which the supply of electric power is promised by the schemes on hand is assured that the rates for electricity throughout the area will not be higher than those prevailing in the Pykara system at present.

One may, therefore, be confident that the financial estimates have not been made with a "hit or miss" attitude.

The Nizamsagar Irrigation Dam, which His Exalted Highness The Nizam formally opened on March 30, forms a huge lake spreading over an area of nearly 50 sq. miles formerly occupied by as many as forty villages. It has a capacity of 306,000 million cb. ft. of water at a depth of 106 feet at the dam site. It is clearly the second largest dam so far constructed in India, and likely to be constructed for a long time to come, the biggest being the Mettur Dam. The

SPEED

The Cauvery River at Trichinopoly is nearly 1½ times as wide as the Hooghly at Howrah Bridge.

Braithwaites bridged the river and opened the line to traffic in six months.

This feat was made possible by the Braithwaite organisation backed by their patented system by which they finished the foundations in five weeks. Seven other similar bridges having an aggregate length of two miles were completed by the same methods' in 13 months of continuous work.

CLIVE WORKS, CALCUTTA — MULUND WORKS, BOMBAY

THE GATEWAY OF INDIA

(FROM OUR CORRESPONDENT)

Bombay, April 3.

Bombay is getting ready for the Silver Jubilee Celebration. And with the reputation of affluence behind the Gateway City, it should beat all records in ostentation. A very laudable feature of this jubilee celebration is that most of the money will be spent on charitable objects including the feeding of the poor. A large amount of the subscribed funds will go to the hospitals and people of all shades of opinion should agree to make this humanitarian project a success.

The cloud of resentment that has hovered over the Western Capital after the Karachi tragedy does not seem to dissipate. There is a general cry for a public enquiry into the incident, especially as to whether the civil authorities took the care and precaution necessary to prevent such a tragedy. It is accepted on all hands that the military acted perfectly within their rights ; faced by a riotous mob within narrow precincts, there was no option but to open fire. At point blank range it caused terrible havoc and it is up to the Enquiry Committee, if one is formed, to find out whether the mob should have been allowed to come within point-blank range of the military pickets. After all, the tragedy involved considerable loss of life and some sort of scrutiny would at least go to placate those who have suffered on account of the tragedy.

The Government of Bombay have tried to come in line with other provincial governments in the matter of according relief to agriculturists. An elaborate scheme of removal of rural indebtedness is already in force in Bengal. And although Bombay is a richer presidency than Bengal, the plight of the agriculturists in the Western Capital is extremely pitiable. A certain amount of relief by way of suspensions and remissions of land revenue has already been afforded by the Bombay government. But the object of the government, as in other presidencies, is the cultivation of a spirit of thrift in the agriculturists. Crushed under a usurious rate of interest, exacted under terrible conditions by the remorseless moneylenders of the agricultural districts, the agriculturist has never had a chance of trying to make good. He has been content, year in and year out, to pay the interest which the money lender waited at his door to exact, with nothing left over for luxury and creature comfort. The purely mercenary money lender must go and a humanitarian system of advancing money to the agriculturists for their demands and requirements must be evolved if India's agriculturist population numbering millions is to be saved from a hopeless stagnation.

Arrangements are a foot for making Karachi one of the most efficient airports in the East. A new aviation division of the Public Works Department under the direction of the Central P.W.D.'s Secretariat has been formed ; and it has its headquarters at Karachi. Mr. C. J. Rae, until lately the Executive Engineer of the Begari Canal division at Jacobabad, has been placed in charge. A three-year programme for the expansion and improvement of aerodromes in Sind and Ahmedabad is being considered. There is to be a central booking office for the different air lines. The booking office building will also have Post Telegraph, and Customs offices and the Health inspection and Passport departments. It will also have a decent restaurant.

Bombay is to come into line with Calcutta in the matter of telephone rates. At the annual meeting of the Bombay Telephone Company Limited, the Chairman spoke on the exceptionally good year which the Company experienced up to the end of March. Not only has the dividend been raised by one per cent. but the telephone rates have been reduced in view of the increase in profits, which will, no doubt, prove a boon to a busy business centre like Bombay.

The Bombay Municipal Corporation considered during the week the report of the Retrenchment and Reforms Enquiry Committee regarding the question of improving the resources of the income of the municipality. The report was accepted practically *in toto* except for the recommendation against levying a tax on professions and trades. This part of the report was referred back to the Committee. The committee dealt *seriatim* with the suggestions contained in the report of the committee of the whole House. With regard to the suggestion of stopping the leakage of wheel tax revenue from motor vehicles pending legislation for the recovery of the tax in advance, the committee invited the attention of the Corporation that dealers in motor cars attached plates, with "general numbers" on cars and used them freely for private purposes. Those numbers were meant to be used on cars taken out for trial purposes, and were therefore charged at a consolidated rate which was much lower than the ordinary wheel tax. Much loss of revenue was thereby sustained by the municipality. The committee recommended that the Commissioner be requested to take steps to stop the leakage caused in that manner.

The committee approved of the suggestion of moving Government to undertake legislation making distress warrants in respect of vehicles for non-payment of wheel tax enforceable even outside the city limits. It also approved of the suggestion of moving Government to undertake legislation investing the municipality with the power to attach and sell immovable property in cases of default of payment of municipal taxes.

(*Continued from page 1193*).

Irrigation project has 98 miles of main and branch canals together with the distributories aggregating to about 1,100 miles. With this, it can irrigate 275,000 acres of land of which 20,000 acres will be under sugar cane and the rest under rice. It is the proud claim of Nawab Ali Nawaz Jung Bahadur, Chief Engineer for Electricity and Secretary of the Public Works Department, that this whole of the nation-building work was carried out in its entirety by the sole efforts of His Exalted Highness' subjects. Mechanical equipment which played a most important role in the construction of similar works elsewhere was reduced to the bare minimum, in order that the employment of the subjects of the State could be maintained at its maximum. In his speech requesting His Exalted Highness to open the dam, the Nawab appropriately reflected that the progress of civilisation has been bound up with the building of dams for purposes of irrigation. It is, indeed, a matter for pride that so large a scheme has been completed and that rich farms will soon replace an arid desert. As regards the financial aspect of the scheme, it is calculated that the project would yield a return of Rs. 40 lakhs per year for a capital investment of a little over Rs. 4½ crores.

A similar extension of irrigation facilities and cultivation of land is the subject of the report of the Government of Mysore. The total extent of irrigation contemplated under the Irwin Canal is 1,20,000 acres. The work so far completed has rendered it possible to afford irrigation facilities for about 56,000 acres, including water-supply to the Agricultural Farm at Ganadalu and the Sugar Factory at Mandy. Against this, the total extent so far brought under cultivation by the end of October, 1914 was only 26,000 acres.

Under the Mysore-Madras Cauvery Agreement of 1924, Mysore is entitled to bring under cultivation a total area of nearly 193,200 acres. The Government are, therefore taking steps to collect the necessary data and formulate the schemes for extending irrigation to the fullest extent before the agreement becomes liable to revision in 1974.

THE BELGA CRISIS

BRITISH ATTITUDE TOWARDS DEVALUATION

FUTILE RESISTANCE CONTINUES.

By PAUL EINZIG.

By Air Mail.

Throughout the past week the Belga crisis was the predominant event in international finance. On March 19, it led to the unexpected resignation of the Belgian Government. And it has taken nearly a week to form a new cabinet of National Union for the defence of the belga. Meanwhile, the flight from the belga continues unabated. The discount on forward belga rose yesterday to 2½ belgas for three months, while the pressure on the spot exchange is duly indicated by the decline of the National Bank's reserve ratio from 64½ per cent to 60 per cent. Towards the end of last week the spot exchange was allowed to take care of itself in the international market. While the official exchange rates were nominally maintained in Brussels within the gold points, actual dealings took place abroad yesterday at a discount of 4 per cent and over, which is rather beyond gold points. It appeared as though Belgium might follow the example of Italy by allowing her controlled exchange to depreciate slightly and gradually without nominally abandoning the Gold Bloc.

The failure of Mr. Theunis to obtain support from France shows conclusively that the Gold Bloc exists on paper only. If there is one country which, for economic, political and moral reasons, is entitled to expect the maximum support from France, it is Belgium. Indeed, before the Paris visit of M. Theunis, it was hoped that he would be able to obtain support not only in the form of credits, but also in the form of trade concessions to relieve the economic depression in the country. Indeed, the origin of the belga crisis was the pessimistic attitude of the Belgian Press prior to the Paris negotiations. Newspapers competed with each other in picturing the situation in Belgium in the darkest possible colours, so as to induce France to grant assistance. The result was a flight from the belga which, however, failed to induce France to loosen her purse strings. Not only did the French Government refuse any tariff and quota concession, but the terms of the credit offer to the National Bank of Belgium were such as to make the transaction valueless. It is said that the Bank of France insisted upon ear marking gold as a security for the proposed credit. Wisely enough, the Belgian authorities realised that in such circumstances, the credit would merely amount to using their own gold and paying interest on it, and declined the offer. The experience must have taught all the countries of the Gold Bloc a lesson in what they can expect from France by way of assistance.

France can hardly be blamed, however, for being unwilling to use up her surplus for the sake of bolstering up untenable positions in other countries. She will have her work cut out in continuing to bolster up her own position. Moreover, the presence of the German menace, which appears to become more and more acute, makes it advisable for France to retain the largest possible amount of gold. In a future war, she will need every franc of gold she possesses for the purpose of buying war material, raw material, food, and, last but not least, allies. This latter item will probaby be the most expensive. Experience has taught the French statesmen that it is useless to finance allies years before the war. As the example of Poland has proved, gratitude does not go very far in the matter of politics. It is advisable to keep the cash and part with it only as and when the necessity for active military support arises. This is the attitude France appears to have taken up. M. Frederic Jenny, who usually acts as the mouthpiece of the Bank of France, writing in a recent number of *Le Temps*, is at pains to prepare the French public opinion for defections from the Gold Bloc, emphasising that such defections would not alter the determination of France to retain her existing parity. "Everybody for himself and the survival of the fittest" seems to have become the slogan within the Gold Bloc instead of the original slogan "United we stand, divided we fall."

The attitude of British interests in face of the Belgian crisis was far from unanimous. Indeed, it appears that there was disagreement even within official quarters. As usual, the Bank of England took up a much more orthodox attitude than the Treasury. The latter's policy as defined by recent statements made by Mr. Neville Chamberlain, laying stress upon the disadvantages, from a British point of view, of the overvaluation of the Continental gold currencies. This implies a desire for a devaluation of gold currencies as a preliminary condition to the stabilisation of sterling. Needless to say, in his official position the Chancellor of the Exchequer could not possibly make his attitude plain. Any definite statement advocating devaluation in a foreign country, whose Government is against such a policy, would be regarded as an unfriendly act of interference with the internal affairs of the countries concerned. Being thus precluded from expressing its views in words, the British Government had to resort to expressing them in acts that speak for themselves. On the day following the resignation of the Belgian Government, the British Treasury announced the increase of steel duties from 33 per cent. to 50 per cent. Anyone acquainted with the predominant importance of the British market for Belgian Steel could not possibly fail to grasp the significance of this move. Throughout the devaluation controversy that has been raging in Belgium, the argument that a devaluation of the belga might be followed by an increase of British steel duties constituted the most powerful weapon of those opposed to devaluation. In raising the steel duties before a decision has been reached on the devaluation of the belga, the British Government rendered this weapon worthless, thereby expressing its attitude favouring devaluation in unmistakable terms. If, up to now, there were many people in Belgium who were opposed to devaluation for fear of higher British duties, the creation of a *fait accompli* was calculated to rule out their objections.

The Bank of England, on the other hand, is decidedly against the devaluation of the belga. Faithful to its orthodox traditions, it prefers the deflationary, rather than the inflationary, solution of the world's monetary problem. Its views are shared by those who are afraid of the repercussions of a devaluation of the belga upon British steel exports. While the home market can be protected, the Belgian exporters would, undoubtedly, gain ground in the foreign markets, thanks to the devaluation of the belga. It is highly probable that the immediate consequence of the devaluation of the belga would be an increase of unemployment in Great Britain. For this reason, even quarters, which until recently were the loudest in proclaiming the supremacy of the Sterling Bloc and in inviting the whole world to join it, begin to feel worried when it comes to the question of Belgium joining the Sterling Bloc. Indeed, *The Times* and other newspapers made it plain that she would be a most unwelcome newcomer to this exclusive club. Other quarters adopted, however, a more broad-minded attitude. They duly realised that, even if the immediate consequence of the devaluation of the belga were an increase of unemployment in Great

POLITICS DOMINATES CITY AFFAIRS

PSYCHOLOGY OF GERMAN CONSCRIPTION

THE BELGA & BRITISH IRON & STEEL

By Francis Williams.

City Editor, *The Daily Herald, London.*

By Air Mail

Special for "INDIAN FINANCE"

London, March 25.

International politics completely dominates City affairs at present. Business on the Stock Exchange has been reduced to an infinitesimal proportion of its normal transactions; and is likely to remain at an extremely low level until the outcome of the British-German talks is known.

In this connection, it should be remembered that, undoubtedly, the German conscription decision was based to a considerable extent upon the economic difficulties within the country.

The Nazi Government has failed to carry out its promises of substantially increasing employment and of a betterment of the social conditions of the workers, while it has insufficient funds to continue public works developmnets, road construction, railways and new houses, which should normally be recommenced this month.

Private correspondence from Germany has shown for some time that the public works programme was breaking down owing to financial difficulties, while the ordinary industrial and trading position continues to worsen.

It has occurred to the Nazis therefore, as it has occurred to other rulers before them, that the easiest and quickest way of solving the unemployment problem is to compel large numbers of the unemployed to join the army.

When such compulsion can, as in Germany at the present time, be linked up with patriotic fervour and with the casting off of a feeling of inferiority which has been in existence ever since the Versailles Treaty, it obviously provides a political and economic weapon of the most attractive kind. Undoubtedly, the conscripion programme in Germany is at the moment extremely popular with the people generally and has, indeed, considerably revived the waning prestige of the Nazis.

As by this stroke Hitler has succeeded in hiding to some extent the failure of his economic policy, solving, if only superficially, a part of his unemployment problem, and increasing substantially his personal popularity, it is unlikely that he will be prepared to revise the conscription programme to any substantial extent whatever Sir John Simon may say or the French may threaten.

It seems inevitable therefore that acute political uncerainty will continue on the continent for some time, and, so long as it continues, we must expect lack of activity in stock markets, particularly as there are no longer any favourable indications of general internal trade revival which might have offset to some extent the unfavourable international outlook.

The international uncertainty has been added to by the political crisis in Belgium, which has struggled hard to form a new Government.

Whether the new Government pledges itself to keep the belga on the gold standard or not, it may be taken for certain, in my opinion, that there will be devaluation of the Belgian currency very shortly.

This, in turn, may precipitate devaluation in Switzerland and Holland, and even, though probably not for some time, in France.

If such devaluation does take place, it will obviously reduce the advantage at present held by the British export industries in consequence of the pound's depreciation.

To that extent, it may offset the favourable developments in the iron and steel industry, to which I referred in my last article. It should, however, remembered that, as I then pointed out, the improvement in the iron and steel industry has been largely due to the development of new uses, and thus in spite of the fact that the export demand, which formerly accounted for some 30% of total output, has fallen to 10%.

A further reduction in export markets, while it would, of course, hit the iron and steel industry to some exent, need not, therefore, mean any drastic reversal in its fortunes. I still regard this industry as one of the most promising from the investment standpoint. Along with it I would put the electrical manfacturing industry, where there is no indication of any serious check in progress.

These two industries, combined with that of building, where great activity still exists, seem to me to be by far the best for permanent investment at the moment.

The present quietness in Stock Markets may provide some excellent opportunities of obtaining sound investments in these three industries at very reasonable levels.

(Continued from the previous page)

Britain, in the long run it would be well worth while to put up with this sacrifice. For the devaluation of the belga would, doubtless, be followed by the devaluation of the other gold currencies; and this again would pave the way towards international stabilisation based on a reasonable degree of equilibrium between price levels in various countries. Moreover, the increase of unemployment would in reality be a blessing in disguise. It would probably shake up the National Government from its attitude of complacency, and would induce it to take at last some active steps towards overcoming the depression. Evidently, this country cannot live for ever on the temporary advantages of her partly under-valued currency. Something more is required for creating solid foundations for prosperity. The Government will have to play a much more active part than it has done up to now. Its rigidly orthodox budgetary policy will have to be thrown overboard for the sake of constructive public works. It has to realise the necessity of economic planning under Government control. The depreciation of the belga and of other gold currencies would go a long way towards bringing about this change of attitude.

The establishment of a Government of National Union in Belgium removes the likelihood of an immediate depreciation of the belga. It makes, however, no difference in the long run, as the renewed efforts to save the belga will only prolong the agony. Belgium needs another lesson before realising where her interests lie. And she will certainly get it before long, in the form of a fresh depreciation of sterling.

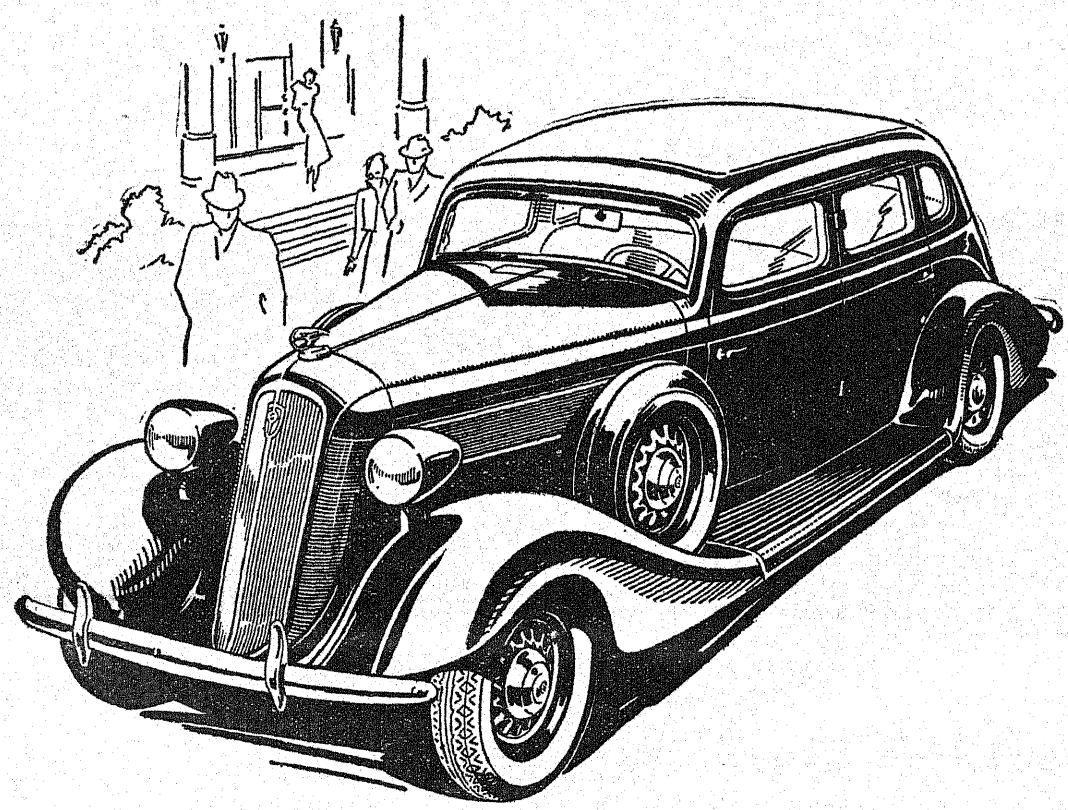
ANNOUNCING THE NEW 1935

STUDEBAKER CHAMPIONS



World's first cars with new independent front wheel suspension which ensures the most restful rear and front seat ride — regardless of size — that motoring has ever known . . .

MAKE US PROVE IT!

World's easiest handling, most obedient, surest-footed cars . . . scientifically steadied against drifting and side slip, even when rounding difficult corners at high speeds . . .

MAKE US PROVE IT!

World's safest, swiftest, straight-line stopping . . . the result of new compound hydraulic brakes of special design which are unexcelled by any car regardless of price . . .

MAKE US PROVE IT!

IN THESE 1935 Champions, Studebaker introduces motoring's most restful rear and front seat ride. We invite you to experience the comfort miracle of Studebaker's new independent front wheel suspension and automatic shock absorption.

Just as amazing is the remarkable handling ease of these new Studebakers. No other cars, regardless of price, respond so obediently. No other cars are so sure-footed, whether on straightaway or turn.

And they stop smoothly, swiftly, surely, with compound hydraulic brakes that have been engineered into each chassis to make Studebaker's miracle ride complete. Bodies are roomier—sedan front seats accommodate three passengers — and fashioned of steel-reinforced-by-steel for maximum safety and comfort.

You'll see nothing smarter than the new skyway silhouette of these Champions. Slender, radiators, new bonnet louvres, gull's wing mudguards, sloping windscreens, air-curved tops and rear decks give them a grace of line that many proclaim the smartest effect ever obtained in automobile architecture.

Studebaker has overlooked nothing in making these new 1935 cars the stand-out values of the automobile world—and they cost but little more than the lowest price cars. Why not arrange for a convincing trial drive today in a New Miracle Ride Studebaker Champion?

OVERSEAS' NEWS: By Air Mail

GREAT BRITAIN

THE BERLIN CONCLAVE

All eyes are still turned towards Germany ; and the coming parley between Sir John Simon and Herr Hitler is the one thought that is excercising the public mind. Such stupendous issues hang on the result of these talks that one may be pardoned for suspecting that, while both Sir John and the redoubtable Hitler will, no doubt, each try to out-do the other in professing amity and pacifist intentions, each probably will have an ultimatum secreted in the breast pocket. Indeed, there is a tragic irony about all this elaborate pretence of peace. And one has a secret admiration for the robust frankness of Mr. Churchill when he advocates an open race in armaments. The world has grown tired of hearing the last holocaust described as a "war to end war." In the interests of lasting peace one would almost welcome such a final conflagration.

The spirit of war is already in the air. But, technically speaking, it is peace till the first shot is fired ; and a nation cannot wait listlessly for the sound of salvoes. All the little details of administration and peace-time problems have to be tackled. The exigencies of war may excuse an enormous deficit budget ; but till the outbreak of hostilities the Chancellor must go in dread of the verdict of the House. With only two more weeks to run, the nature of the year's account is becoming daily more evident. There is now hardly any doubt that there will be a small surplus on the year's working though to Saturday last expenditure still exceeded revenue by £5,032,726. At the corresponding date last year, there had already accrued a surplus of over £22,000,000. But the last few weeks of a financial year are notoriously the eleventh hour when a large revenue is realised. Thus the last two weeks of 1933-34 yielded a surplus of £9,108,966. If the last fortnight of the present financial year does no worse, there will be a surplus in the neighbourhood of £4 millions. But compared to the last fortnight of last year, expenditure this year will be heavier by about a million pounds for allocations to debt interest and sinking fund if the fixed debt charges of £224,000 provided for in the estimates is to be attained. The actual surplus, therefore, may be a paltry £3 million, barring surprises and accidents. And in the electric atmosphere of international tension who knows what surprises may come?

The policy of protection, which has been followed by the present Government in all its various manifestations of quotas, tariffs and subsidies, was carried a step further by the decision of the Treasury, on the recommendations of the Import Duties Advisory Committee, to raise the duties on certain elementary iron and steel products from the existing thirty-three per cent. basis to approximately a fifty per cent. average. This will increase the prospects of Britain joining the International Steel Cartel and, in fact, a temporary arrangement is reported to be already effected between the two, covering the British market. The announcement of the increased duties was diplomatically timed to coincide with the meeting of the Cartel in order to force a favourable decision.

The decision of the Import Duties Advisory Committee was chiefly influenced by the fact that last year imports of iron and steel rose by 41 per cent. as compared with the previous year. The improvement in productive efficiency and internal organisation of the industry is, according to the Committee, impeded by a swelling of imports. A large proportion of the iron and steel now being imported could with advantage be produced at home. While it is true that a satisfactory agreement between the Cartel and Britain is desirable in the interests of both and while there is no doubt that industry derives a large benefit from damming the flow of foreign imports, it should be remembered that such heavy imposition of duties on foreign materials raises the cost of production of manufactures and, therefore, affects the consumer directly. While it may be true that the fact that Britain is a country of higher costs is due to reasons over which the industry has no control, it must also be admitted that the cost can be lowered by the industry putting its house in order and by better internal organisation and agreement. Happily, India is not adversely affected by the enhanced duties as her imports consist chiefly of pig-iron the duty on which has not been increased. But countries which are affected may seek to capture, through reckless price-cutting, the markets which are still open to British products. It is absolutely necessary, therefore, for a decision which is satisfactory all round to be arrived at the coming meeting of the cartel. It is amusing to think that these efforts at industrial co-operation on an international scale should proceed under a sky rumbling with war clouds. In the event of war, these international agreements will go by the board and each nation will be thrown on its own resources and on its own markets.

The new duties, which will come into force from March 26, are given in full below:—

Blooms, billets and salts:	
If the value does not exceed £4 per ton.	£2 per ton.
If the value exceeds £4 per ton and does not exceed £7 10s.	£2 10s. per ton.
Bars and rods (other than rods in coils):	
If the value does not exceed £4 per ton.	£2 per ton.
If the value exceeds £4 per ton and does not exceed £9 per ton.	£3 per ton.
Angles, shapes and sections:	
If the value does not exceed £7 per ton.	£3 per ton.
If the value exceeds £7 per ton and does not exceed £15 per ton.	£4 per ton or 33⅓ % ad valorem, whichever is the greater.
Girders, beams, joists and pillars.	£3 per ton or 33⅓ % *ad valorem*, whichever is the greater.
Hoop and strip:	
If the value does not exceed £7 per ton.	£3 per ton.
If the value exceeds £7 per ton and does not exceed £16 per ton.	£4 per ton or 33⅓ % *ad valorem*, whichever is the greater.
Rails	£3 per ton or 33⅓ % *ad valorem*, whichever is the greater.

The duties on goods under these headings of values above the upper limits of value shown are governed by trade agreements.

It will be seen that the duties, specific instead of *ad valorem* in most cases, will raise the level of protection from 33 1/3 per cent. to between 50 to 65 per cent.

Another trade agreement of some importance has been concluded between Great Britain and Italy. This is a tentative agreement pending a more definite one which the two Governments hope to conclude shortly. It affects only the United Kingdom imports into Italy.

This arrangement, which is the result of the recent Italian provisions regulating imports into Italy, provides that 80 per cent. of all United Kingdom imports into Italy, based on the corresponding period of last year, are to be admitted into Italy, subject to the following method of payment:—

The Italian importer will deposit the required lire in an Italian bank ; those lire to remain untouched until the bank shall dispose of sufficient sterling for transfer to the United Kingdom. The cost of any exchange operation will be borne by the Italian importer.

The Italian Government guarantees that all devisen accruing from Italian imports into the United Kingdom, as from the date of the signature of the provisional agreement, shall be devoted exclusively to the payment of United Kingdom imports into Italy.

It is understood that arrangements will at once be made to allow British goods to enter Italy in accordance with the agreement.

Air Mail Week

U. S. A.

EVENTLESS, BUT HOPEFUL

Several weeks have rolled by without an important event or the emergence of an all-absorbing topic. Compared to the stirring days of 1933, the present is dull and dreary. Even the Administration would seem to have lost something of the titanic energy which enabled it in the past to carry out almost revolutions by the time-table. General Johnson sallied forth like a knight-errant and came back with the trophies in the shape of the heads of financial barons and industrial magnates. Colossal schemes were worked out every day, the discussions of which would take far more than the space allotted for a weekly letter. Every week had its surprises as well in the sphere of Government's announcement as in the popular reactions thereto. The novelty of the experiments caused lightning turns in the course of business which it was necessary and useful to study.

There is now an abatement of all these. The New Deal would no longer seem to be worked at such high pressure. Doubtless, its machinery is not fully installed. There are some additions to the existing plant which will have to be made if the original plans are to be adhered to. Even such as it is, it is clogged in some respects, in certain others it is the victim of a sabotage on the part of those who work it, and it may also be added that the New Deal, too, has also changed over, like all modern industry, to restrictionism. It is in the nature of things that such hectic activity as we have seen during the last two years should now slow down somewhat and that the Government should fall into a comparatively reflective mood. There is, for one thing, the objective obstacle of the Federal Court's decisions. The indomitable courage and impetuous onslaught, which served the Administration well in other respects, have little place in the dealings with the Courts.

There are also the disappointments in the sphere of international finance. Everyone knows that Mr. Roosevelt's schemes in regard to the dollar and its value in terms of foreign currencies have not worked according to plan. Considering the uncertainties that have cropped up lately, it is certainly fortunate that Mr. Roosevelt decided at the beginning of 1934 to effect a revaluation of the dollar and to reserve for himself at the same time the power to effect a further devaluation. But the foreign countries have consistently refused to come off their precarious perch on the heights of the gold standard ; and till the Continental gold countries make clear their intentions, the monetary side of the New Deal is held up.

The same may be said of other parts of the New Deal plan. The principal industries are experiencing strange fluctuations. Agriculture is still fed by bounties. The break-up of cotton prices, which occurred last week, is a rude reminder of the artificial character of the present position. It may be that rumours of various kinds had been regulated by interested parties in order to bring about a sensational fall in prices. It has also come to light since, that even the American pool was believed at that time to have effected large-scale sales in countries like Russia. Even if allowance were made for such rumours, it still remains that the fundamental position of American cotton is unsound.

In this position the various sections have lost something of that zeal for the common interests of the nation which characterised the earlier years of Mr. Roosevelt's regime. It is unfortunate that at this time Congress should also consist of various sections devoted to pet fads and fancies. If it had been possible for Mr. Roosevelt to get in Congress a disciplined majority, such as the British Cabinet normally enjoys in the House of Commons, there can be no doubt that Mr. Roosevelt could have achieved far more than he has done and that many of the difficulties which loom so large would have disappeared. But that is not to be. American political life and the manner in which elections are held and parties are trained for the legislature are such that the President often meets with opposition even amongst his own followers. Perhaps the worst embarassment at present is, that some of the democrats would like to hurry the President on the paths of inflation. Other groups have their eyes on particular bills. The treatment accorded by the legislature to the Relief Bill itself shows the handicaps under which the Administration in America have to labour.

One of the more interesting phases of the present position is that an agitation has arisen for the removal of Mr. Eccles from his place as Governor of the Federal Reserve Board. Certain sections in the Senate are opposed to the confirmation of Mr. Eccles and it is believed that there is a strong fight impending on the floor of the Senate. The reason, of course, is that Mr. Eccles' opinion on questions regarding currency and banking are not to the liking of some members of the Senate. It was only the other day that Mr. Eccles attacked the idea that inflation is dangerous. "I do not believe", Mr. Eccles observed, "that it is so easy to get inflation. Certainly many attempts have been made, but we are just as far from it now as we were three years ago." It is, indeed, difficult to deny this statement of Mr. Eccles. In spite of all the inflationary talks of the Administration there has been very little of it ; and there can be no effective inflation till a great part of the present public works plan is put into effect. People often think of the experiences of European belligerent nations during the War. But it is overlooked that the Governments of those countries had a huge mass of war expenditure ready for them and that it was the easiest thing to expend the additional currency that was being created by the printing press. But, nevertheless, this expression of opinion of Mr. Eccles is taken to presage frantic inflation during his regime. Another radical idea of Mr. Eccles is that the payment of interest on Government bonds held by banks was a sort of subsidy to enable them to give service to their customers. He criticised the "hundred per cent. plan" whereby the banks would be compelled to keep only cash behind their deposits thus enabling the Government to avoid paying interest on the debt. Though the Senate might witness a sharp clash of opinions on the question of Mr. Eccles there is no doubt that on this, as on so many other matters, Mr. Roosevelt's will will prevail.

These differences cannot make up for the dreary eventlessness of current economic history. There is no doubt that there can be no big move forward till the public works expenditure programme is taken up earnestly on hand. Till that is done, one can only take note of the minor fluctuations of the fortunes of each industry. Iron and steel has suffered a slackening of demand. It is not certain yet whether this reflects an actual fall in consumption or merely caution amongst buyers. The increase, when it occurred, was due to the automobile industry taking up a plan of increased output. The automobile manufacturers are still maintaining an ambitious production programme. But it is a question how long this can last. The output of ingots has fallen to 47½ per cent. of capacity. Steel mill activity has come down to 46.8 per cent. of capacity from 47.1 per cent. last week. But there is one section of American industry which has started the year extremely well. It is reported that demand for agricultural implements has been good. This is attributable to the rise of farm prices and the favourable winter conditions. The companies, which manufacture agricultural implements, report satisfactory conditions. Another section which is doing well at the moment is that of companies which are connected with the automobile industry. The manufacturers of automobile window panes did better business in

Air Mail Week

January than the corresponding period of the previous five years. The rayon industry was unusually active. The motor accessories manufacturers have been doing so well that the results of their working should show substantial improvement. These bright patches are still to be woven into a pattern. But they afford hope where otherwise there would be unrelieved gloom.

GERMANY

CONSCRIPTION

It is a memorable week for Germany—It is memorable, too, for the rest of the world, though who can say that the memories will be altogether pleasant ! The Nazi proclamation of the new law establishing immediate conscription for Germany has caused jubilation in Germany and consternation in all the western capitals where Politicians and diplomats were alike brooding over the unhappy *denouement*. Political affairs, rather military affairs to be more precise, have taken the dominance over matters economical and financial, and it is, therefore, essential that the latest official proclamation should be given its proper setting.

Coming as it does like a bombshell at an unguarded hour, it is only natural that this act of Gerany should be interpreted by the victor states, as a breach of the sacred clauses of the Treaty of Versailles. From the curtailed strength of 100,000 men to constitute the peace time army, to the enhanced provision for 750,000 men to form the Reichswehr (this is what it will amount to when the 36 divisions now contemplated are added) the stride taken has been too long to be looked upon with equanimity. Add to this the knowledge that in the sphere of air forces Germany is in command of a very effective squadron of supreme efficiency, the flutter of anxiety can very well be understood. Another factor that has added an element of gloom to this bleak atmosphere is that the announcement should have been made on the eve of a proposed tripartite conference on the much vexed question of disarmament—though it would be unwise to call this a mere fortuitous coincidence.

But Nazi Germany has made out a well-reasoned case justifying the course of action she has taken. Briefly put, the case for Germany centres round the fact that the obligations of the Treaty by which the European powers are now swearing, have already been broken. As the proclmation puts it: "Germany had disarmed and the Peace Treaty required such disarmament in order to create a pre-requisite of a general disarmament—but whereas Germany, as one party to the Treaty, had fulfilled its obligations, the other party defaulted. The high contracting parties of the former victor states went forward with new and more terrible war equipment and the war clamour revived. Germany remained disarmed in the midst of highly armed and re-arming states. It can be readily understood why Germany began urgently to demand the fulfilment of the promise of disarmament by other states."

As an indication of the good faith of the State that the other powers need not be alarmed at this step of the repudiation of the Treaty obligation, Germany can point to the Pacts of non-aggression that she has concluded with Poland for the next ten years. She can point to the solmen assurance given to France on the eve of the return of the Saar, that, with the territorial claims so honourably settled, she will neither present nor raise any further claims against France. To, again quote the proclamation, "the German Reich today has only one moral and material purpose—the power to safeguard peace for the Reich and therewith for the whole of Europe," by ending the state of "impotent defencelessness of a great nation." In plain language, the vast increase of the Soviet army with an effective strength of 960,000 and with no obligations to restrict it under the disarmament clauses, and the extension of the length of period of military service to two years by France, and the latest propoposals made before the British Parliament for the strengthening of the Air forces, have all provided sufficient justification for the apparently sudden and disturbing course of action that Germany has chosen to follow. The fear of being encircled by the Soviet on the one side and France on the other, both of which command very highly organised military forces, was ever present before Germany ; and the worthlessness of the Disarmament Conference was proved beyond any doubt when Japan left it. When, a little later, Germany left the League in dignified disgust, the Disarmament Conference had received a blow from which it is still to recover. Considering the fact that Japan is none the worse for being out of the League, the futility of vainly clinging to a treaty which has

come to be no more than a scrap of paper, has been too firmly driven home to the Nazis.

As was to be expected, the signatories to the Treaty have felt their dignity wounded by the latest Nazi enterprise. The British Government have despatched a note of protest drawing attention to the understanding arrived at on February 3, which laid down that the entire question should be settled by mutual negotiation and not unilaterally. The French Note of Protest has apparently disregarded even the elements of propriety of language. The French Republic has felt it to be its duty to make a most formal protest against these measures, on the subject of which they express here and now all reservations. These reservations are that "Germany must bear the full responsibility for the state of unrest thus created and for the consequence that may result from it." They announce their firm resolve "not to allow unilateral decision taken in violations of international understanding to be taken into account in any negotiations." Before the Chamber, M. Flandin declared that in bringing an act so grave before the League of Nations, France is serving the cause of peace and the interests of the community of states, "as the peace of the world is again at stake."

Leaving aside for the moment these protests and counter protests, a dispassionate observed cannot fail to notice certain fundamental factors. Whether the Nazi action is merely a legal regularisation of an already existing state of tension or not, it has now come out in the open without any reserve as to her intentions. That Germany must value the preservation of the Reich, the safety of which is now threatened, due to rearmament by neighbours, no one can deny. Whatever may be the causes that brought about the state of distrust, now that Germany had made known her intentions, the future negotiations on disarmament should prove to be smooth and instructive. No longer need Germany regard herself as occupying an inferior status. How this change in the situation is going to be utilised by the victor states, remains to be seen. Another equally important fact is that this proclamation has cried a halt to an era of uncertainty. Now that the worst is known about Germany, there need no longer be any mistrust and suspicion about her intentions and *bona fides*. The problems are too pressing to admit of being permanently postponed. Nations are right in demanding that their responsible statesmen shall find ways and means to overcome the distress caused by the nightmare of an impending war on a tortured continent. Europe must set to work unless it wishes to see its fate sealed and allow chaos to overwhelm it. The change in the attitude towards the Versailles Treaty that has now come over the Continent cannot also fail to be noticed. That it is a treaty that has kept a highly cultured nation in a state of bondage and humiliation, that it has been the cause of the poitical and economic revolutions that the post war world has witnessed, that the way in which the Treaty was administered to the victor and the vanquished, has dealt a final blow to principles of democracy—these have now come to be readily recognised. It is now for the European diplomats to show in action how far this change in the circumstances is going to be utilised. Sir John Simon, hopes to visit Berlin shortly as the apostle of Peace, for a frank discussion with Herr Hitler. The occasion calls for a complete frankness and all eyes are now on this visit to watch how Sir John will try to make amend semi-finished for the tactical blunder that the British Ministry made in announcing the war estimates just at the psychological moment on the eve of a pending negotiation.

JUTE AND JUTE GOODS

JUTE

Calcutta, April 4.

During the current week easier conditions have prevailed in the jute market and prices on balance are lower than those ruling in the previous week. The highest and the lowest quotations for June futures were Rs. 34-12 and Rs. 33-8 respectively.

The want of rain in the jute growing areas reported during the previous week still continues, though a small rainfall is reported from certain districts. And the trade hopes for more rainfall in the course of this week and next.

The paucity of contracts has been less keenly felt now as a fair amount of sales has already taken place from certain quarters. The weakness and heavy liquidation in jute shares during the early part of the week had natural repercussions on raw jute and consequently an easier tone has prevailed.

The holdings by outside-the-trade people are heavy and this is always a bear factor in the market. The market will however remain narrow for sometime to come because buying interest will be displayed at each decline, as it is more than certain that the jute crop of the season will be less than that of the last year. But from the technical point of view it seems that the effect of short crop is partly discounted at this moment and soon after the result of sowings are announced there will be heavy unloading on the market which the usual trade buying will not be in a position to absorb all at once. Therefore, there is a likelihood that the rise in jute which is expected at a much earlier date will be delayed for some time and it would not be surprising if it takes place in the latter half of 1935.

Business in April First was done at Rs. 32 with sellers over towards the close. Some business was done in Lightnings for outports, ready at Rs. 26-8 per bale and Tossa 2-3 ready at Rs. 29-4 and April Rs. 29-8 per bale. There was no business to report from the mills. The tone of the market was easy, and sale on rise is recommended at the moment.

JUTE MANUFACTURES

Calcutta, April 4.

The market has on the whole remained dull and uninteresting with an easier undertone. The volume of business was poor and fluctuations very narrow. Mills have sold fair quantities for forward positions which have been taken up by bear operators.

Towards the close of the week one of the big operators is reported to have sold a very large quantity of hessians at declining prices; but it had not much effect on the market.

Stocks at March end were slightly larger than the previous month. It is anticipated that working days in April being more than in March, the stock position at this month-end will be larger still. From May 1st 2½ per cent. of sealed looms are to be released and all these factors are responsible for easier conditions. Business in 10 oz. ready was done at Rs. 11-11 and 7½ oz. at Rs. 9-1. Business in striped Heavy Cees was done at Rs. 24-10 and Liverpool at Rs. 27-4. Cornsacks July-September were done at Rs. 25-10. The undertone of the market is quiet.

Total reported stocks of manufactured goods as at 31st March, 1935.

Hessian Cloth and Bags	8,20,91,458
Sacking Cloth and Bags	9,56,96,913

*These figures include the returns of Adamjee, Agarpara, Gagalbhai and Shais Hanuman Mills in addition to those of members.

Total reported sales for the week ending Saturday, the 30th March, 1935.

COTTON AND COTTON GOODS

COTTON

Calcutta, April 4.

The Bombay market registered an appreciable improvement at the week-end, following the prelimniary fears of the likely disruption of the gold bloc and the political tension in Europe. With expiry of the option regarding Broach April-May contract an unsettling element has been eliminated and the market is requiring a more confident tone.

Trading commenced in the Broach April-May contract at Rs. 218-4 against a previous close of Rs. 216-12 and went up to Rs. 221 due to the general sentiment on the long side combined with heavy buying and short covering. Petty realising operations followed and the rate receded to Rs. 220-4.

Against an expectation of 2 points lower, the Liverpool May rate opened at a small rise of one point to recede later and the Bombay market witnessed heavy selling operations which dropped the rate to Rs. 217-4.

Stocks in the Punjab are reported to be heavy owing to the poor off-take of late and prices have weakened. The number of bales pressed in the Punjab last week was 40,059 compared with 57,585 in the corresponding week 1934. The total output at the end of March, 1935, is slightly over 8,00,000 bales, showing a shortage of over a lakh of bales compared with last year's output.

The Indian Central Cotton Committee has issued the following statement of consumption of Indian cotton in mills in India :—

(In bales of 400 lbs.)

British India during February, 1935, 170,218; during February, 1934, 156,749; since 1st September, 1934, 1,138,862; during corresponding period last year, 964,134.

Indian States during February, 1935, 34,585 ; during February, 1934, 30,838; since 1st September, 1934, 218,050; during corresponding period last year 187,437.

Total India during February, 1935, 204,803; during February, 1934, 187,587; since 1st September, 1934, 1,356,912; during corresponding period last year 1,151,571.

The trade returns of British India for the month of February, 1935, show that shipments of raw cotton advanced from 61,000 tons to 66,000 tons in quantity and from Rs. 3,28 lakhs to Rs. 3,87 lakhs in value. Of the total shipment of 66,000 tons Japan was the largest purchaser, taking 37,000 tons or 56 per cent.; the United Kingdom 7,00 tons and Germany 5,000 tons.

The stock of all cottons in the world on January 31, 1935, was, according to the New York Cotton Exchange Service, the smallest since 1931, aggregating 25,728,000 bales. The same authority states that world consumption of all kinds of cotton during the first half of the 1934-35 season amounted to 12,384,000 bales of 478 lbs. each. On a percentage basis American cotton constituted 47.5 per cent. of the total consumption.

Cotton Goods

Calcutta, April 4.

Enquiries from distributing centres in Bihar induced a sporadic activity in the local market in light whites printed and fancy styles and fine dhooties. Eastern Bengal showed no interest last week and the market has not moved appreciably from the previous week's position, though the anxiety of dealers to clear stocks against heavy arrivals of fresh stock has had a weakening effect. The stock position is uncertain as dealers are testing replacement values before accepting commitments.

The following are the comparative statistics of imports (in pieces) of piecegoods into Calcutta, Bombay and Karachi, during January-February, 1935, and the two previous years :—

Grey

	Calcutta.	Bombay.	Karachi.
1935	4,079,231	321,129	672,241
1934	1,606,813	312,347	520,367
1933	5,392,829	399,165	478,796

White

	Calcutta.	Bombay.	Karachi.
1935	456,988	165,264	537,128
1934	387,850	454,796	403,673
1933	463,352	390,297	1,315,394

Coloured, Printed, etc.

	Calcutta.	Bombay.	Karachi.
1935	983,342	563,821	387,861
1934	580,765	581,357	316,899
1933	407,087	738,272	515,689

Lancashire reports that India remains a disappointing market, as attempts to arrange sales for Calcutta proved futile owing to low offers.

No activity was noticeable last week in the yarn section —the local and upcountry demand having been nominal.

BULLION

GOLD

Calcutta, April 4.

Sharp fluctuations occured in the gold section of the Bombay Bullion Exchange at the week-end, though the turnover was considerable. The effect of the devaluation of Belga on world markets has been so slight that it steadied the market after a short interval of uncertainty and the rate for May settlement which had sagged to Rs. 35-10-9 recovered to Rs. 35-14 on the rapid deterioration of sterling in terms both of dollar and franc.

The total imports of gold from United Kingdom during the week ended March 22, 1935, amounted to £272,000 of which £120,000 went to Veneruela and £86,000 to Belguim—Total imports during the same week amounted to £6,575,000, to which France contributed £3,931,000, India £1,092,003, Africa £678,000 and Canada £618,000.

LONDON—Air Mail Week.

The Bank of England gold reserve against notes amounted to £192,520,583 on the 13th March, showing no change as compared with the previous Wednesday.

The currency difficulties of Belgium, culminating in dealings in gold and exchange in that country being placed under State were very disturbing factors in exchanges during the week; the announcement by Germany of her return to military conscription was a further disquieting factor. In consequence, the open market in gold has been very active, prices showing considerable variations as a result of widely fluctuating exchanges.

Business was on a large scale, the amount offered at "fixing" totalling about £2,200,000, which was readily absorbed by keen general demand.

SILVER

Calcutta, April 4.

The Bombay Bullion Exchange reports a better tone in the silver section, with prices on the upward trend at the week-end. The devaluation of Belga forced at first huge sales, lowering the rate for May delivery to Rs. 73-14, which later rallied quickly to Rs. 74-8 when renewed buying pushed up prices, closing at Rs. 67-15 ready ; May Rs. 75-4 and June Rs. 68-8.

Total imports from the United Kingdom during week ending March 22, 1935, amounted to £935,000, of which £890,000 worth was shipped to limited States. Total imports during the same week amounted to £100,000 to which Japan and India contributed £29,000 and £28,000 respectively.

London Air Mail week:

The silver market in common with other markets, has been somewhat unsettled following the erratic exchange movements due to political developments during the week. In consequence, prices have tended to fluctuate, but there has been a fair amount of activity, although the immediate tendency has been less defined.

The Indian Bazaars, China and speculators bought and sold in turn, whilst America gave support, although this quarter showed restraint at the higher levels.

The undertone continues good, but the market in the near future may be influenced largely by fluctuations in exchanges.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 11th March to mid-day on the 18th March.

Imports	£
Japan	83,100
British India	18,507
New Zealand	13,600

TEA

Calcutta, April 4.

London advices state that prices were firm for common teas at the last sales. Both India and Ceylon teas of good liquoring blend were in demand at good prices, Continental markets having absorbed largely suitable Orange Pekoes.

In the Legislative Assembly Sir Joseph Bhore, Commerce Member, introduced on April 1, a Bill to amend the Indian Tea Cess Act, 1903. In the statement of objects, it is explained that, "The object of the Bill is to raise the maximum rate of cess levied on the exports of tea from India by sea from 8 annas per 100 lbs. to 12 annas per 100 lbs. in order to finance the intensive propaganda work in Indian markets, as a complementary measure to the scheme of export restriction now in operation."

"The proposal carries with it the support of the tea growing industry in India and all Local Governments and Indian States concerned in the production of tea and a very large majority of commercial bodies who have been specifically consulted on the proposal have expressed themselves in its favour."

Ceylon

At the London auctions on April 2, 18,900 packages of Ceylon tea were submitted for sale. Low mediums were in good demand but for fines there was less competition and they displayed irregularity.

The following were the lowest prices feteh during the day's auction:—

Common Pekoe last auction 10½d., to-day's auction 10½d. per lb.; Common Broken Pekoe last auction 10½d., to-day's auction 10½d. per lb.; Common Orange Pekoe last auction 11d., to-day's auction 10¾d. per lb.; Common Broken Orange Pekoe last auction 11d., to-day's auction 11d. per lb.

The following are the value prices:—

Clean Common Pekoe last auction 10½d., to-day's auction 10⅝d. per lb.; Clean Common Broken Pekoe last auction 10½d., to-day's auction 10¾d. per lb.; Clean Common Orange Pekoe last auction 11d. to-day's auction 11½d. per lb.; Clean Common Broken Orange Pekoe last auction 11¼d., to-day's auction 11¼d. per lb.

India

At the London auction on April 1, 26,800 packages of Indian tea were submitted for sale when there was a good general demand for the offerings for all descriptions.

The following were the lowest prices fetched during the day's auction:—

Pekoe 9¾d. last auction 9½d.

Common Pekoe last auction 9½d., to-day's auction 9½d. per lb.; Common Broken Pekoe last auction 9¾d., to-day's auction 9½d. per lb.; Common Orange Pekoe last auction 9½d., to-day's auction 9¼d. per lb.; Common Broken Orange Pekoe last auction 10d., to-day's auction 10d. per lb.; Common Broken Pekoe Souchong last auction 9½d., to-day's auction 9½d. per lb.

The following were the value prices:—

Clean Common Pekoe last auction 9⅞d., to-day's auction 9¾d. per lb.; Clean Common Broken Pekoe last auction 9¾d., to-day's auction 9½d. per lb.; Clean Common Orange Pekoe last auction 10d., to-day's auction 10d. per lb.; Common Broken Orange Pekoe last auction 10⅛d., to-days auction 10⅛d. per lb.; Clean Common Broken Pekoe Souchong last auction 9¾d., to-day's auction 9¾d. per lb.

SUGAR

Calcutta, April 4.

Messrs. Bird & Co. in their Sugar Bulletin dated March 30, state:—

Calcutta

The Java sugar market remained very depressed during the week under review. Although stocks at this port were very small, the absence of demand coupled with the close of the Bengali year has been responsible for buyers being unwilling to purchase even at reduced rates. Dealers and speculators anxiously await news as to the action Indian sugar manufacturers will take in disposing of the balance of their unsold stocks and in consequence the future tone of the market is uncertain.

As regards Indian sugars, general conditions remain the same as reported last week, but it is felt that demand which has previously been so poor may begin to improve after the close of the Bengali year. Interest is also noticeable for distant deliveries at lower rates than those asked for by sellers and dealers are reported to be of the opinion that sellers will be compelled to reduce their limits to clear stocks.

Bombay

The same dullness in the market for Java white as reported last week continued with the result that prices registered a further decline of about 2d. per cwt. for ready and 1d. per cwt. for forward delivery. The main causes of this further decline have been the pressure of sales for a quantity of approximately 3,400 tons per *S.S. Quermba* and *S.S. Baron Napier* both of which shipments arrived during the end of last week together with poor offtake.

During the latter part of the week, however, it is reported that the offtake developed an improved tendency which resulted in prices firming up and the ground lost in the earlier part of the week was regained both for ready and forward positions.

As regards Indian sugars the market ruled quiet with an easier tendency due to very poor demand while arrivals continued as previously. Arrivals during the week are estimated at 1,000 tons and stocks at 5,500 tons.

Delhi and the Punjab

Conditions in Delhi and surrounding markets during the week under review remained unchanged as compared with last week. The poor offtake is responsible for the failure to liquidate the heavy stocks and it is reported that a fair quantity is still lying with the Railway authorities undelivered aganst previous commitments.

Karachi

The market for Java white sugar in Karachi is reported to have weakened during the week under review on account of the arrivals of several shipments totalling a quantity of about 3,775 tons.

Stocks are estimated at about 5,175 tons which are exclusive of indigenous sugar, and dealers feel that due to the weaker advices from Bombay and the reported heavy arrivals the market may show further signs of depression. The future, however, remains uncertain.

As regards Indian sugars the market has remained weak due to heavy arrivals and easier advices from Cawnpore but it is expected that as soon as stocks are transferred to stronger hands some improvement may be noticeable.

Cawnpore

The local sugar market continued to remain weak during the period under review, but at the close, due to some enquiry for second crystals, prices for this quantity of sugar firmed up and it is anticipated that if enquiry continues some improvement may be evident.

As regards first crystals the tone of the market is uncertain due to a few manufacturers coming out in the market to sell the balance of their production at best available rates.

General

With the poor cane crop experienced almost throughout India this season and the consequent reduction in the estimated production, it is surprising that markets are not firmer, particularly in view of the fact that most Mills must have already sold the major portion of their production and with few exceptions are holding out for better prices for forward delivery.

The improved statistical position of Java and the lower estimated production of Khandsari are further bullish features and all these factors taken together should indicate an upward trend in prices.

PRICES.

MISCELLANEOUS

WHEAT

Calcutta, April 4.

Karachi reports that Liverpool and Chicago cables are responsible for the steady tone of the market last week, prices advancing to about 8 annas per candy. Punjab stocks are plentifil and in view of the approaching new crop stockholders are disposed to liquidate their holdings on all advances. Spot sales during last week totalled about 18,000 bags which were taken over by mills. Arrivals from up-country averaged 3,000 bags a day and exports for Bombay totalled 200 bags only.

The weather is reported favourable for the new crop. Punjab basis was a shade easy, Okara ready being quoted at Rs. 1-14-3, which works out roughly to Rs. 21-8 per candy f.o.r. Karachi.

SHELLAC

Very little business was done last week on the Calcutta market at Rs. 85/- a maund—the price fixed for T. N. Shellac by the Calcutta combine. Firms within and outside the combine are selling to the United States and Continental markets at any price available. Last month the local price stood at Rs. 25 to Rs. 25 a maund. At the beginning of this month the price was Rs. 22 for May and Rs. 23 for ready. The trade is divided in opinion—some thinking that there is no cause for nervousness and others fearing a collapse. It has been decided to keep the market closed till the end of this month.

London brokers, who were holding floating stocks of 30,000 to 40,000 in the middle of March when negotiations for the formation of a new pool to secure the orderly marketing of stocks outside the big pool fell through, sold out thereafter quickly to realise their capital. The price fixed by the London Shellac Association was 72s. 6d. for May delivery: there was no turnover at this rate.

Bran	2 2 to	2 3

Market: Quiet but steady.

GROUNDNUTS

The Madras market continues to remain steady—the improvement of the previous weeks being maintained, after a slight set-back in Coromandel machined which declined to £13-15 and £13-16-3 for March and April positions and then touched £14-2 and £14-5 respectively. The same fluctuations took place in Shippers' buying limits which opening over the week-end at Rs. 36 for Machined and Rs. 32 for Ordinary, declined to Rs. 35-8 and Rs. 31-8 respectively and then hardened to Rs. 37 and Rs. 37-4 per French candy of 531 lbs. ex. coast godowns. Ready goods are offering at Rs. 40.

RUBBER

Messrs. Symington and Wilson in their rubber market report dated London, March 20 says:—

On Thursday of last week the market opened firm and business was done in Standard Ribbed Smoked Sheet on the Spot at 6d. per lb. By Thursday evening, however, a considerably easier tone had developed and from then until Monday evening there was a steady downward slide in prices. No business was actually reported in Spot Sheet on Monday below 5 5/16d. but March and April delivery were both done as low as 5 3/16d. and at one time there were no better buyers of Spot than 5 3/16d.

Encouraged by a recovery in New York on Monday afternoon, the market opened on Tuesday with a rising tendency and some part of the loss was recovered. This morning the market opened fully steady and up to the time of writing the tone has remained steady to firm though prices still show a loss of ½d. to 9/16d. per lb. on the week.

The lower range of values has attracted considerable fresh buying, including a good demand from manufacturing interests. The demand from manufacturers is running almost entirely on near rubber either landed or afloat or for shipment in the next two months. There has been a little fresh speculative demand, but this has not run into any quantity. There has also naturally been considerable bear covering and New York dealers have been in the market for forward delivery. There is good ground to believe that a large speculative bear account has been built up in New York in the last few days.

The cause of the weakness which developed on Thursday was the announcement that some of the American tyre factories had decided to work shorter time in order to reduce inventories owing to retail sales of tyres being slow. In these circumstances it becomes necessary to revise estimates of total American consumption for the year and current estimates point to a consumption for the four months, March to June, of 35,000 to 40,000 tons less than had been expected.

Bees' Wax.—Crude at Rs. 36 to Rs. 37 per md. loose, Refined White at Rs. 42 per md. loose.

HIDES AND SKINS

Messrs. Mousell & Co., Ld. write:—

Drysalted Cowhides.—The unsold stocks in the Calcutta markets about to 10,600 pcs. Shippers purchased 5,600 pcs. at Rs. 3-4 to Rs. 3-8. Shippers' direct imports from up-country amount to 9,500 pcs.

Ars. Framed Cowhides.—48,800 pcs. are offered for sale in Colootolla. Shippers and Madras tanners purchased 8,300 pcs. at Rs. 4-8 to Rs. 5-8 according to selection and weight.

Ars. Unframed Cowhides.—5,900 pcs. Purneahs and Durbhangas and 25,500 pcs. Light Arsenics are offered for sale. Shippers and Madras tanners purchased 5,400 pcs. Purneahs and Durbhangas at Rs. 3-4 to Rs. 3-12 2,500 pcs. Light Arsenics at Rs. 3 to Rs. 3-12 and 2,000 pcs. Commons at Rs. 3.

Goatskins.—213,000 pcs. are reported as unsold. Shippers purchased 82,000 pcs. Patnas, 2,800 pcs. Daccas, 10,400 pcs. Dinajpores and 39,000 pcs. Wetsalteds. Shippers' direct imports from up-country amount to altogether 38,500 pcs. The market is on basis of Rs. 60 to Rs. 80 for Patnas.

METAL MARKET

Messrs. Balmer Lawrie and Co., in their metal market report for the week ended April 3 say:—

Galvanized Corrugated Sheets.—The market remains very dull, with little business passing. Demand is very poor so that little can be expected even in the way of forward business.

Steel.—There was the usual rush of business just prior to the closing of the Government year—since then inquiry has been much reduced and no improvement is likely until the middle of April.

STATISTICAL INFORMATION

Railway Traffic

The total approximate gross earnings of all State-owned Railways for the week ending 16th March, 1935 (50th week), amount ti Rs. 186 lakhs, Rs. 2 lakhs less than the figures for the preceding week and Rs. 8 lakhs less than the actuals for the corresponding week of the previous year and Rs. 8 lakhs more than the actuals for the corresponding week of 1932-33.

The total approximate gross earnings from 1st April, 1934, to 16th March, 1935, amount to Rs. 85.94 crores or Rs. 301 lakhs more than the actuals for the corresponding period of the previous year and Rs. 565 lakhs more than the actuals for the corresponding period of 1932-33.

The following are the up-to-date approximate gross earnings and working expenses of the State-owned Railways from 1st April, 1934, as compared with the actuals of the corresponding period of last year :—

Railways.	Earnings. Up to 16-3-34 (in lakhs) Rs.	Up to 16-3-35 (in lakhs) Rs.	Working Expenses. Up to 31-1-34 (in lakhs) Rs.	Up to 31-1-35 (in lakhs) Rs.

S. I. ...	491	505	220	221
Tirhoot & Lucknow-Bareilly ...	168	178	50	53
Other Railways ...	38	42	18	19
Total ...	8,293	8,594	3,964	4,017

A comparison with the figures of the previous week for the principal State-owned Railways shows decreases in the approximate gross earnings of all railways except the East Indian and South Indian. A comparison with the actuals of the corresponding week of 1934 shows decreases in the approximate gross earnings of all the principal State-owned Railways except the East Indian, South Indian and Tirhoot and Lucknow-Bareilly.

Wagon Loadings.

Comparisons of figures of wagon loadings on Class I Railways for the week ending 16th March, 1935, and for the cumulative period from 1st April, 1934, to 16th March, 1935, with the corresponding periods of the previous year are as follows:—

During the week ending 16th March, 1935, there were loaded on the broad gauge 88,011 wagons, being 958 fewer than in the corresponding week of the previous year, or a decrease of 1.08 per cent. On the metre gauge there were loaded 59,857 wagons, being 1,658 more than in the corresponding week of the previous year, or an increase of 2.85 per cent.

For the period from 1st April to 16th March, 1935, there were loaded on the broad gauge 4,000,365 wagons, being 220,700 more than in the corresponding period of the previous year, or an increase of 5.84 per cent., and on the metre gauge 2,557,468 wagons, being 164,792 more than in the corresponding period of the previous year, or an increase of 6.89 per cent.

which even Diogenes's lamp in broad daylight could not discover a buyer.

There is an impression that 3½ per cent. Rupee Paper must necessarily be tied on to the apron strings of 3½ per cent sterling stock. For this reason, any fall in sterling paper results in immediate retrogression in the price of the Rupee Paper. But it is not every rise of the sterling stock that can pull up the Rupee security correspondingly. We would like to remind the market that during Sir Basil Blackett's days, it was the 3½ per cent. Rupee Paper which was quoting anything like ten points higher than 3½ per cent. sterling paper. In those days, the Indian public had full confidence in the credit policy and credit operations of the Government. It was only when this began to lag behind. This process went on till 3½ per cent. Rupee Paper and 3½ per cent. sterling paper were roundabout the same level in 1930-31. After which, 3½ per cent. sterling paper shot up and, at one time, was quoted ten points higher than the Rupee Paper. Till recently, the position was that the sterling paper was about a point higher than the Rupee stock. In fact, a stage was reached when the Rupee stock stole a march over the sterling stock. The position has detoriorated again. 3½ per cent. sterling stock is now quoted at £93, while the Rupee paper is quoted roundabout Rs. 88. There is thus a disparity of five points against the Rupee stock. Yet, if only the market understood the real position of the Indian gilt-edge market and the London giltedge market, it is the Rupee stock that should be leading. For, the Indian market is entirely free from adverse effects of the 'bad money' which keeps rushing into and rushing out of London. India is a self-contained market. In these days, this itself constitutes great strength.

Exchange has been inclined to be quiet. On the weekly tender day, application for £185,000 at 1s. 6 1/32d., were received and allotted in full. Lower tenders were rejected.

The closing rates are: 1s. 6 3/32d., April T.T.; 1s. 6-1/16d., May T.T.; and 1s. 6-1/32., T.T. right up to December.

Bills may be quoted: 1s. 6 5/32d., up to May 23. Forward rates are merely nominal as there was no business to test the rates.

Money was in less demand in the early part of the week but firmed up towards the close. The quotable rate at the end was 3½ per cent. for call money.
